THE AUTHORS

PREFACE

The object of this book is to provide a simple introduction to the Indian systems of philosophy. Each one of these systems has had a vast and varied development and cannot be treated adequately in a brief work like this. Attempt has been made to introduce the reader to the spirit and outlook of Indian philosophy and help him to grasp thoroughly the central ideas rather than acquaint him with minute details. Modern students of philosophy feel many difficulties in understanding the Indian problems and theories. Their long experience with university students has helped the authors to realize these, and they have tried to remove them as far as possible. This accounts for most of the critical discussions which could otherwise have been dispensed with.

The book has been primarily written for beginners. The first chapter which contains the general principles and basic features of Indian philosophy, as well as a brief sketch of each system, gives the student a bird's-eye view of the entire field and prepares him for a more intensive study of the systems which are contained in the following chapters. It is hoped, therefore, that the book will suit the needs of university students at different stages, as well as of general readers interested in Indian philosophy. It will serve the needs of B.A. Pass students who may be required to have a brief general acquaintance with Indian philosophy as a whole, as well as those of Honours students who may be

expected to have a more detailed knowledge of one or more systems.

It is the firm conviction of the writers that Reality is many-sided and Truth is manifold ; that each system approaches Reality from one point of view or level of experience and embodies one aspect of Truth. They have tried more to approach each system with sympathy and justify it, rather than dismiss it with a customary criticism. They believe that a sympathetic insight into the great systems will enable the student to grasp their truths more easily and give him a sound philosophical outlook.

While an attempt has been made to bring out the significance of Indian views in terms of modern Western thought, care has always been exercised to preserve their distinctive marks, such as their spiritual and practical outlook, their recognition of the different levels of experience.

The authors are grateful to Dr. Syamaprasad Mookerjee, M.A., D.Litt., B.L., M.L.C., Vidyāvācaspati, Barrister-at-Law, ex-Vice-Chancellor, Calcutta University, at whose suggestion the work was undertaken, and to Sir S. Radhakrishnan, Kt., M.A., D.Litt., George V Professor of Philosophy, Calcutta University, Spalding Professor of Eastern Religions and Ethics, Oxford University, who has very kindly gone through the manuscript and made valuable suggestions. They are also indebted to Professor Krishnachandra Bhattacharyya, M.A., with whom they discussed some of the problems treated here and received much light and guidance. They are grateful also to the authorities of the Calcutta University, and especially to the Registrar,

the Superintendent of the Press and his energetic colleagues, for the publication of the work.

NOTE TO STUDENTS

The paragraphs which occur in small type in this book are meant for more advanced students and may be omitted by beginners. The attention of students is specially invited to the select bibliography given at the beginning of each chapter. Reference to it will explain the abbreviations of the names of books found in the footnotes.

For correct pronunciation, students should note that the following scheme has been adopted for representing Sanskrit sounds in English :

अ=अ=a, आ=आ=ā, इ=इ=i, ई=ई=i, उ=उ=u, ऊ=ऊ=ū, ए=ए=e, ऐ=ऐ=ai, ओ=ओ=o, औ=औ=au.

क=क=k, ख=ख=kh, ग=ग=g, घ=घ=gh, ङ=ङ=ñ, च=च=c, छ=छ=ch, ज=ज=j, झ=झ=jh, ञ=ञ=ñ, ट=ट=t, ठ=ठ=th, ड=ड=d, ढ=ढ=dh, न=न=n, त=त=t, थ=थ=th, द=द=d, ध=ध=dh, न=न=n, प=प=p, फ=फ=ph, ब=ब=b, भ=भ=bb, म=म=m, य=य=y, र=र=r, ल=ल=l, व=व=v, श=श=ś, ष=ष=ṣ, स=स=s, ह=ह=h, ऋ=ऋ=ṛ, ॠ=ॠ=ṛ, ऌ=ॡ=ḷ, ॢ=ॣ=ḷ, ऎ=०=ā, १=२=ā, ३=४=ā, ५=६=ā, ७=८=ā, ९=१०=ā, ११=१२=ā, १३=१४=ā, १५=१६=ā, १७=१८=ā, १९=२०=ā, २१=२२=ā, २३=२४=ā, २५=२६=ā, २७=२८=ā, २९=३०=ā, ३१=३२=ā, ३३=३४=ā, ३५=३६=ā, ३७=३८=ā, ३९=४०=ā, ४१=४२=ā, ४३=४४=ā, ४५=४६=ā, ४७=४८=ā, ४९=५०=ā, ५१=५२=ā, ५३=५४=ā, ५५=५६=ā, ५७=५८=ā, ५९=६०=ā, ६१=६२=ā, ६३=६४=ā, ६५=६६=ā, ६७=६८=ā, ६९=७०=ā, ७१=७२=ā, ७३=७४=ā, ७५=७६=ā, ७७=७८=ā, ७९=८०=ā, ८१=८२=ā, ८३=८४=ā, ८५=८६=ā, ८७=८८=ā, ८९=९०=ā, ९१=९२=ā, ९३=९४=ā, ९५=९६=ā, ९७=९८=ā, ९९=१००=ā.

CHAPTER I

GENERAL INTRODUCTION

I. THE BASIC FEATURES OF INDIAN PHILOSOPHY

1. *The Nature of Philosophy*

Like all other living beings man struggles for existence. But while the lower beings struggle more or less blindly without any conscious plan and purpose, and work by instinct, man uses the superior gift of his intellect to understand the conditions and meaning of the struggle and to devise plans and instruments to ensure success. He wishes to lead his life in the light of his knowledge of himself and the world, taking into consideration not merely the immediate results of his actions, but even their far-reaching consequences. Desire for knowledge springs, therefore, from the rational nature of man. Philosophy is an attempt to satisfy this very reasonable desire. It is not, therefore, a mere luxury, but a necessity. As an eminent English writer puts it: "Men live in accordance with their philosophy of life, their conception of the world. This is true even of the most thoughtless. It is impossible to live without a metaphysic. The choice that is given us is not between some kind of

The necessity of philosophy.

2 AN INTRODUCTION TO INDIAN PHILOSOPHY

metaphysic and no metaphysic; it is always between a good metaphysic and a bad metaphysic.”¹

Philosophy in its widest etymological sense means ‘love of knowledge.’ It tries to know things that immediately and remotely concern man. What is the real nature of man? What is the end of this life? What is the nature of this world in which he lives? Is there any creator of this world? How should man live in the light of his knowledge of himself, the world and God? These are some of the many problems, taken at random, which we find agitating the human mind in every land, from the very dawn of civilization. Philosophy deals with problems of this nature. As philosophy aims at knowledge of truth, it is termed in Indian literature, ‘the vision of truth’ (darśana). Every Indian school holds, in its own way, that there can be a direct realization of truth (tattva-darśana).

In the history of European philosophy we find that as human knowledge about each of the different problems mentioned above began to grow, it became impossible for the same man to study everything about every problem. Division of labour or specialization became necessary; and a group of men devoted themselves to a particular problem or a few connected problems. There came into existence in this way the different special sciences. Physics, Chemistry, Botany, Astronomy, Geology and similar sciences took up each a part or aspect of the world of nature. Physiology, Anatomy and the other medical sciences devoted themselves to the different problems of the human body. Psychology began to study the problems of the human mind. The detailed study of many of the particular problems with which philosophical

¹ Aldous Huxley, *Ends and Means*, p. 252.

speculation originally started became thus the subject matter of the *special sciences*. Philosophy then began to depend on the reports of the investigation made by the different sciences, tried to understand their meanings and implications critically, and utilized these results for understanding the *general nature* of the universe—man, nature and God. The evolution of philosophical thought has been more or less the same in Europe and in India.

European philosophy at the present day has for its main branches (a) Metaphysics, which discusses the general problems regarding Reality—man, nature and God. (b) Epistemology or theory of knowledge, which enquires into the nature of human knowledge, as to how it develops and how far it is able to grasp reality, (c) Logic, which discusses the laws of valid reasoning and other incidental problems, (d) Ethics, which investigates the problems of morality, such as the standard of moral judgment, the highest goal of human life and other cognate problems, and (e) Aesthetics, which deals with the problems of beauty. Another recent development of philosophy, called Axiology, is devoted to the discussion of the problem of values. Sociology is also sometimes regarded as a branch of philosophy and often discussed along with Ethics. Psychology has been so long a very important branch of philosophy, but the tendency now is to treat it as one of the special sciences like Physics and Chemistry and give it a place independent of philosophy.

Though the basic problems of philosophy have been the same in the East as in the West and the chief solutions have striking similarities, yet the methods of philosophical enquiry differ in certain respects and the processes of the development of philosophical thought also vary. Indian philosophy discusses the different problems of Metaphysics, Ethics, Logic, Psychology and Epistemology, but generally it does not discuss them separately. Every problem is discussed by the Indian philosopher from all possible approaches, metaphysical, ethical, logical, psychological and epistemological. This tendency has been called by some thinkers, like Sir B. N. Seal the synthetic outlook of Indian philosophy.

2. *The Meaning and Scope of Indian Philosophy*

Indian philosophy denotes the philosophical speculations of all Indian thinkers, ancient or modern, Hindus or non-Hindus, theists or atheists. 'Indian philosophy' is supposed by some to be synonymous with 'Hindu philosophy.' This would be true only if the word 'Hindu' were taken in the geographical sense of 'Indian.' But if 'Hindu' means the followers of a particular religious faith known as Hinduism, the supposition would be wrong and misleading. Even in the ancient writings of the orthodox Hindu philosophers, like the *Sarva-darśana-saṅgraha* of Mādhavācārya which tries to present in one place the views of *all* (sarva) schools of philosophy, we find in the list of philosophies (darśanas) the views of atheists and materialists like the Cārvākas, and unorthodox thinkers like the Bauddhas and the Jainas, along with those of the orthodox Hindu thinkers.

Indian philosophy is marked, in this respect, by a striking breadth of outlook which only testifies to its unflinching devotion to the search for truth.

The broad outlook of Indian philosophy.

Though there were many different schools and their views differed sometimes very widely, yet each school took care to learn the views of all the others and did not come to any conclusion before considering thoroughly what others had to say and how their points could be met. This spirit led to the formation of a method of philosophical discussion. A philosopher

had first to state the views of his opponents before he formulated his own theory. This statement of the opponent's case came to be known as the prior view (*pūrvapakṣa*). Then followed the refutation (*khaṇḍana*) of this view. Last of all came the statement and proof of the philosopher's own position, which, therefore, was known as the subsequent view (*uttarapakṣa*) or the conclusion (*siddhānta*).

This catholic spirit of treating rival positions with consideration was more than rewarded by the thoroughness and perfection that each philosophical school attained. If we open a comprehensive work on the Vedānta, we will find in it the statement of the views of all other schools, Cārvāka, Bauddha, Jaina, Sāṅkhya, Yoga, Mīmāṃsā, Nyāya and Vaiśeṣika, discussed and weighed with all care; similarly, any good work on the Bauddha or Jaina philosophy discusses the other views. Each system thus became encyclopædic in its grasp of ideas. Naturally we find that many of the problems of contemporary Western philosophy are discussed in Indian systems of philosophy. Besides, we find that indigenous scholars with a thorough training exclusively in Indian philosophy are able to deal even with abstruse problems of Western philosophy with surprising skill.

If the openness of mind—the willingness to listen to what others have to say—has been one of the chief causes of the wealth and greatness of Indian philosophy in the past, it has a definite moral for the future. If Indian philosophy is

The consequent thoroughness of the Indian systems.

Its moral for the future of Indian philosophy.

once more to revive and continue its great career, it can do so only by taking into consideration the new ideas of life and reality which have been flowing into India from the West and the East, the Aryan, the Semitic and the Mongolian sources.

3. *The Schools of Indian Philosophy*

According to a traditional principle of classification, most likely adopted by orthodox Hindu thinkers, the schools or systems of Indian philosophy are divided into two broad classes, namely, orthodox (āstika) and heterodox (nāstika). To the first group belong the six chief philosophical systems (popularly known as *ṣaḍ-darśana*), namely, Mīmāṃsā, Vedānta, Sāṅkhya, Yoga, Nyāya and Vaiśeṣika. These are regarded as orthodox (āstika), not because they believe in God, but because they accept the authority of the Vedas.¹ The Mīmāṃsā and the Sāṅkhya do not believe in God as the creator of the world, yet they are called orthodox (āstika) because they believe in the authoritativeness of the Vedas. The six systems mentioned above are not the only orthodox systems; they are the chief ones, and

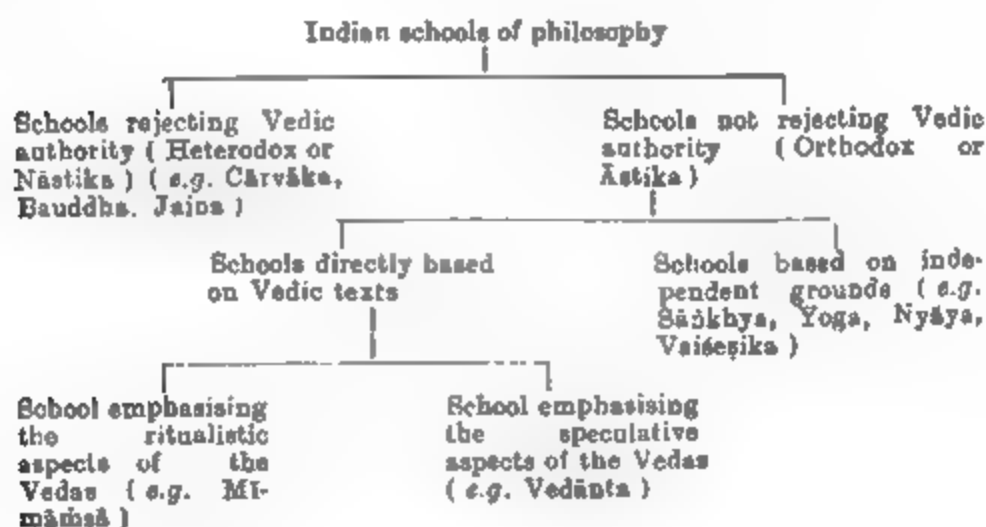

¹ In modern Indian languages, 'āstika' and 'nāstika' generally mean 'theist' and 'atheist,' respectively. But in Sanskrit philosophical literature, 'āstika' means 'one who believes in the authority of the Vedas' or 'one who believes in life after death.' ('Nāstika' means the opposite of these.) The word is used here in the first sense. In the second sense, even the Jaina and Buddhist schools are 'āstika,' as they believe in life after death. The six orthodox schools are 'āstika,' and the Cārvāka is 'nāstika' in both the senses.

there are some other less important orthodox schools, such as the Grammarian school, the Medical school, etc., also noticed by Mādhavācārya. Under the other class of heterodox systems, the chief three are the schools of the Materialists like the Cārvākas, the Bauddhas and the Jainas. They are called heterodox (nāstika) because they do not believe in the authority of the Vedas.

To understand this more clearly we should know something regarding the place of the Vedas in the evolution of Indian thought. The Vedas are the earliest available records of Indian literature, and subsequent Indian thought, specially philosophical speculation, is greatly influenced by the Vedas, either positively or negatively. Some of the philosophical systems accepted Vedic authority while others opposed it. The Mīmāṃsā and the Vedānta may be regarded as the direct continuation of the Vedic culture. The Vedic tradition had two sides, ritualistic and speculative (karma and jñāna). The Mīmāṃsā emphasised the ritualistic aspect and raised a philosophy to justify and help the continuation of the Vedic rites and rituals. The Vedānta emphasised the speculative aspects of the Vedas and developed an elaborate philosophy out of Vedic speculations. As both these schools were direct continuations of Vedic culture, both are sometimes called by the common name, Mīmāṃsā; and for the sake of distinction the first is called Pūrva-Mīmāṃsā (or Karma-Mīmāṃsā) and the second Uttara-Mīmāṃsā (or Jñāna-Mīmāṃsā). But the more usual names of these two are Mīmāṃsā and Vedānta respectively, and

The place of the Vedas in Indian philosophy.

we shall follow this common usage here. Though the Sāṅkhya, Yoga, Nyāya and Vaiśeṣika based their theories on ordinary human experience and reasoning, they did not challenge the authority of the Vedas, but tried to show that the testimony of the Vedas was quite in harmony with their rationally established theories. The Cārvāka, Bauddha and Jaina schools arose mainly by opposition to the Vedic culture and, therefore, they rejected the authority of the Vedas. These facts may be summed up in a tabular form as follows:

4. *The Places of Authority and Reasoning in Indian Philosophy*

The distinctions discussed above can be ultimately traced to distinctions in the methods of speculation, adopted by the different schools.

The grounds of philosophy.

Solutions of philosophical problems, like 'What is the ultimate cause of the world?',

Should philosophy always depend on ordinary experience or should it sometimes depend on the experience of the wise few?

'Does God exist?', 'What is the nature of God?', cannot be obtained by observation. The philosopher must employ his imagination and reasoning, and find out

answers consistent with truths already established by experience. Like most other branches of knowledge, philosophy proceeds, therefore, from the known to the unknown. The foundation of philosophy is experience, and the chief tool used is reason. But the question arises here: "What experience should form the basis of philosophy?" Indian thinkers are not unanimous on this point. Some hold that philosophy should be based

The two views.

on ordinary, normal experience, i.e. on truths discovered and accepted

by people in general or by scientists. This is the view of most modern European thinkers. In India the Nyāya, the Vaiśeṣika, the Sāṅkhya and the Cārvāka school accept this view fully; the Bauddha and the Jaina school also accept it mostly. On the other hand, there are thinkers who hold that regarding some matters, such as God, the state of liberation, etc., we cannot form any correct idea from ordinary experience; philosophy must depend for these on the experience of those few saints, seers or prophets who have a direct realization (sākṣātkāra or darśana) of such things. Authority, or the testimony of reliable persons and scriptures, thus forms the basis of philosophy. The Mīmāṃsā and the Vedānta school follow this method. They base many of their theories on the Vedas and the

Upaṇiṣads. Even the Bauddha and the Jaina school depend sometimes on the teachings of Buddha and Jinas who are regarded as perfect and omniscient. In Europe the scholastic philosophy of the middle ages was based similarly on the authority of the Christian scriptures.

Reasoning is the chief instrument of speculation for philosophers of both these classes. The difference is that whatever be the grounds, reason is the instrument of philosophical speculation. while by the former reasoning is made always to follow the lead of ordinary experience, by the latter reasoning is made to follow in some matters the lead of authority, as well.

The charge is often heard against Indian philosophy that its theories are not based on independent reasoning but on authority and, therefore, they are dogmatic, rather than critical. This charge is clearly not true of the majority of Indian systems which are as much based on free thinking as any we can find in the West even in this modern age of critical speculation. The criticism may be chiefly levelled against the two systems of the Mīmāṃsā and the Vedānta which, we have found, give an important place to authority. Though these systems start from authority, the theories they develop are supported also by such strong independent arguments that even if we withdraw the support of authority, the theories can stand well and compare favourably with any theory established elsewhere on independent reasoning alone. Man, as a rational creature, cannot of course be satisfied unless his reason is satisfied. But if arguments in favour of a philosophy are sufficient to satisfy his reason, the additional fact

of its being based on the experiences of persons of clearer minds and purer hearts will rather add to its value.

5. *How the Indian Systems Gradually Developed*

In the history of European philosophy we usually

The parallel growths of the Indian schools and their persistence through the lives and teachings of active followers.

find the different schools coming into existence successively. Each school predominates till another comes in and replaces it. In India, on the other hand, we find that the

different schools, though not originating simultaneously, flourish together during many centuries, and pursue parallel courses of growth. The reason is to be sought perhaps in the fact that in India philosophy was a part of life. As each system of thought came into existence it was adopted as a philosophy of life by a band of followers who formed a school of that philosophy. They lived the philosophy and handed it down to succeeding generations of followers who were attracted to them through their lives and thoughts. The different systems of thought thus continued to exist through unbroken chains of successive adherents for centuries. Even to-day, we find the active followers of some of the chief philosophical schools in different parts of India, though development of indigenous philosophy has all but ceased now, due to social and political vicissitudes.

It should not be supposed, however, that the differ-

Each school criticizes and influences every other school.

ent systems developed within their respective circles of active followers, without mutually influencing one

another. On the contrary, as we have pointed out previously, each philosophy regarded it as its duty to consider and satisfy all possible objections that might be raised against its views. In fact it is by constant mutual criticism that the huge philosophical literature has come into existence. Due to this again, there developed a passion for clear and precise enunciation of ideas and for guarding statements against objections. Mutual criticism further makes Indian philosophy its own best critic.

Bearing this fact of mutual influence in mind we may try to understand the general process by which the systems originated and developed. The Vedas, we have said, are directly or indirectly responsible for most of the philosophical speculation. In the orthodox schools, next to the Vedas and the Upaniṣads, we find the sūtra literature marking the definite beginning of systematic philosophical thinking. 'Sūtra' etymologically means 'thread,' and in this context it means a brief mnemonic statement. As philosophical discussions took place mostly orally, and as they were passed down through oral traditions handed down by teachers to students, it was perhaps felt necessary to link up or *thread* together the main thoughts in the minds of students by brief statements of problems, answers, possible objections and replies to them. A sūtra-work consists of a collection of many sūtras or aphorisms of this kind, arranged into different chapters and sections according to different topics. The *Brahma-sūtra* of Bādarāyaṇa, for example, contains the aphorisms that sum up and *systematize* the philosophical teachings of different Vedic works, chiefly the Upaniṣads, and also briefly mention and answer actual and possible objections to these views. This work is the first *systematic* treatise on Vedānta. Similarly, we have for Mīmāṃsā, the sūtras of Jaimini, for Nyāya, the sūtras of Gotama, for Vaiśeṣika, the sūtras of Kaṇāda, for Yoga, the sūtras of Patañjali. According to tradition, on Sāṅkhya also there

were the sūtras of Kapila, who is regarded as the founder of the system. But the sūtras now available are not recognized by all as the original sūtras. The earliest systematic work available now is the *Sāṅkhya-kārikā* of Iśvara Kṛṣṇa.

The sūtras were brief and, therefore, their meanings were not always clear. There arose Commentaries on the sūtras, thus the necessity of elaborate explanation and interpretation through commentaries. These chief commentaries on the respective sūtras were called the Bhāṣyas, the names and further particulars about which will be found later in the chapters on the different schools. But it should be noted that, in some cases, on the same sūtra-work different authors wrote different major commentaries (bhāṣyas) and interpreted the sūtras to justify their respective standpoints. Thus came into existence, for example, the different Bhāṣyas on the *Brahma-sūtra* by Saṅkara, Rāmānuja, Madhva, Vallabha, Nimbārka, Baladeva and others. The followers of each interpretation formed into a school of Vedānta and there arose the many schools of Vedānta we find now.

As time went on, commentaries on commentaries arose and sometimes independent works Sub-commentaries and independent works. also were written to supply hand-books or to justify, elaborate or criticize existing doctrines. The philosophical literature of the orthodox schools developed in this way. The history of the development of the heterodox doctrines is also more or less the same. They do not start, however, from any sūtra-work of the above kind. The accounts of these will be given in the chapters dealing with those schools.

Though the different schools were opposed to one another in their teachings, a sort of harmony among them was also conceived by the Indian thinkers. They believed that all persons were not fit for all things and in religious, philosophical and social matters we should take into consideration these differences in fitness and consequent distinctions of rights (adhikāra-bheda). The different

The harmony among the schools. The gradation of the schools according to the fitness of followers.

14 AN INTRODUCTION TO INDIAN PHILOSOPHY

philosophical disciplines, as already pointed out, were taken in India as the different ways of shaping practical lives. Consequently, it was all the more necessary to discriminate the fitness of their followers. The many systems of philosophy beginning from the materialism of the Cārvāka school and ending with the Vedānta of Śaṅkara offer the different paths for philosophical thinking and living that suit persons of differing qualifications and temperaments. But even apart from this pragmatic explanation, we can discover in schools, outwardly opposed, many positive points of agreement, which may be regarded as the common marks of Indian culture.

6. *The Common Characters of the Indian Systems*

The philosophy of a country is the cream of its culture and civilisation. It springs from the ideas that prevail in its atmosphere and bears its unconscious stamp. Though the different schools of Indian philosophy present a diversity of views, we can discern even in them the common stamp of an Indian culture. We may briefly describe this unity as the unity of moral and spiritual outlook. To understand this, let us consider its main aspects and illustrate points of agreement among the different schools.

The most striking and fundamental point of agreement, which we have already discussed partly, is that all the systems regard philosophy as a

(1) The practical motive present in all systems.

practical necessity and cultivate it in order to understand how life can be best led. The aim of philosophical wisdom is not merely the satisfaction of intellectual curiosity, but mainly an enlightened life led with far-sight, foresight and insight. It became a custom, therefore, with an Indian writer to explain, at the beginning of his work, how it serves human ends (*puruṣārtha*).

But it should also be remembered that the presence of a practical motive did not narrow the scope of Indian philosophy to Ethics and Theology alone as some Western critics¹ imagine. Its scope is as wide as any philosophy springing only from theoretic motives ; and even on theoretical grounds some branches of Indian philosophy, like Metaphysics, Epistemology and Logic, can easily hold their own against any system of the West.

The reason why the practical motive prevails in Indian philosophy lies in the fact that every system, pro-Vedic or anti-Vedic, is moved to speculation by a spiritual disquiet at the sight of the evils that cast a gloom over life in this world and it wants to understand the source of these evils and incidentally the nature of the universe and the meaning of human life, in order to find out some means for completely overcoming life's miseries.

¹ E.g. Thilly (vide his *History of Philosophy*, p. 8).

Stace (*A Critical History of Greek Philosophy*, p. 14).

The attitude of mind which looks at the dark side of things is known as pessimism. Pessimism, in Indian philosophy, is initial not final. Indian philosophy has often been criticized as pessimistic and, therefore, pernicious in its influence on practical life. How far this criticism is justified will be seen in the course of this book. But one general point should be noted here. Indian philosophy is pessimistic in the sense that it works under a sense of discomfort and disquiet at the existing order of things. It discovers and strongly asserts that life as it is being thoughtlessly led is a mere sport of blind impulses and unquenchable desires; it inevitably ends in and prolongs misery. But no Indian system stops with this picture of life as a tragedy. It perhaps possesses more than a literary significance that even an ancient Indian drama rarely ends as a tragedy. If Indian philosophy points relentlessly to the miseries that we suffer through shortsightedness, it also discovers a message of hope. The essence of Buddha's enlightenment—the four noble truths—sums up and voices the real view of every Indian school in this respect; namely: There is suffering.—There is a cause of suffering.—There is cessation of suffering.—There is a way to attain it. Pessimism in the Indian systems is only initial and not final.¹

The outlook which prevents the Indian mind from ending in despair and guarantees its final optimism is what may be described as spiritualism.

(8) The belief in an 'eternal moral order' in the universe.

¹ For a full discussion of this point, see Introduction to Prof. Radhakrishnan's *Indian Philosophy*, Vol. I, pp. 49-50.

after William James. "Spiritualism," says James, "means the affirmation of an eternal moral order and letting loose of hope." "This need of an eternal moral order is one of the deepest needs of our breast. And those poets, like Dante and Wordsworth, who live on the conviction of such an order, owe to that fact the extraordinary tonic and consoling power of their verse."¹ The faith in 'an eternal moral order' dominates the entire history of Indian philosophy, barring the solitary exception of the Cārvāka materialists. It is the common atmosphere of faith in which all these systems, Vedic and non-Vedic, theistic and atheistic, move and breathe. The faith in an order—a law that makes for regularity and righteousness and works in the gods, the heavenly bodies and creatures—

pervades the poetic imagination of the seers of the R̥g-veda which calls this inviolable moral order Rta. This

The different forms of this faith.

idea gradually shapes itself into (a) the Mīmāṃsā conception of apūrva, the law that guarantees the future enjoyment of the fruits of rituals performed now, (b) into the Nyāya-Vaiśeṣika theory of adṛṣṭa, the unseen principle which sways even over the material atoms and brings about objects and events in accordance with moral principles, and (c) into the general conception of karma, which is accepted by all Indian systems. The law of karma in its different aspects may be regarded as the law of the conservation of moral values, merits and demerits of actions. This law of conservation means that there is no loss of the effect of work done (kṛta-

¹ *Pragmatism*, pp. 106-07.

18 AN INTRODUCTION TO INDIAN PHILOSOPHY

pranāśa) and that there is no happening of events to a person except as the result of his own work (akṛtābhyupagama). The law of karma is accepted also by the Jainas and the Bauddhas.¹

An eminent Danish philosopher, Harald Höffding, defines religion as "the belief in the conservation of values."² It is mainly such belief that raises Indian systems like Jainism and Buddhism to the status of religion in spite of the absence of a belief in God.

It is again this faith in 'an eternal moral order,' which inspires optimism and makes man the master of his own destiny.

Optimism is generated by this faith.

It enables the Indian thinker to take present evil as consequence of his own action, and hope for a better future by improving himself now. There is room, therefore, for free will and personal endeavour (puruṣakāra). Fatalism or determinism is, therefore, a misrepresentation of the theory of karma.

Intimately connected with this outlook is the general tendency to regard the universe as the moral stage, where all living beings get the dress and the part that befit them and are to act well to deserve well in future. The body, the senses and the motor

(4) The universe as the moral stage.

¹ The word *karma* means both this law and also the force generated by an action and having the potency of bearing fruit. In the second sense, three kinds of karma are sometimes distinguished: (a) *sañcita* or accumulated karma of the past which remains stored up and has not yet borne any effect, (b) *prārabdha* or current karma which also was acquired in the past but has already begun to bear fruits (such as life in the present body, and all other possessions we already have), and (c) *sañciyamāna* or accumulating karma which is being gathered in this life.

² Vide Perry, *Philosophy of the Recent Past*, p. 206 f.n. Cf. Höffding, *The Philosophy of Religion*, pp. 1-13.

organs that an individual gets and the environment in which he finds himself are the endowments of nature or God in accordance with the inviolable law of karma.

Another common view, held by all Indian thinkers,

(5) Ignorance is the cause of bondage and knowledge is necessary for liberation.

is that ignorance of reality is the cause of our bondage and sufferings, and liberation from these cannot be achieved without

knowledge of reality, i.e. the real nature of the world, and the self. By 'bondage' is commonly meant the process of birth and rebirth and the consequent miseries to which an individual is subject. 'Liberation' (mukti or mokṣa) means, therefore, the stoppage of this process. Liberation is the state of perfection; and according to some Indian thinkers, like the Jainas, Bauddhas, the Sāṅkhyas and the Advaita-Vedāntins, this state can be attained even in this life. Perfection and real happiness can, therefore, be realized even here, at least according to these chief Indian thinkers. The teachings of these masters need not make us wholly unworldly and other-worldly. They are meant only to correct the one-sided emphasis on 'the here' and 'the now'—the short-sightedness that worldliness involves.

But while ignorance was regarded as the root cause of the individual's trouble and knowledge, therefore, as essential, the Indian thinkers never believed that a mere acquaintance with truth would at once remove imperfection. Two types of discipline were thought necessary for making such

But mere theoretical knowledge is not sufficient.

understanding permanent as well as effective in life, namely, continued meditation on the accepted truths and practical life of self-control.

The necessity of concentration and meditation led to the development of an elaborate technique, fully explained in the Yoga system. But *yoga*, in the sense of concentration through self-control, is not confined to that

(6) Continued meditation on truths learnt is needed to remove deep-rooted false beliefs.

system only. It is found in some form or other in Buddhism, Jainism, the Sāṅkhya, the Vedānta, and even in the Nyāya-Vaiśeṣika systems. The followers of these various views believed, in common, that the philosophic truths momentarily established and understood through arguments were not enough to dispel the effects of opposite beliefs which have become a part of our being. Our ordinary wrong beliefs have become deeply rooted in us by repeated use in the different daily situations of life. Our habits of thought, speech and action have been shaped and coloured by these beliefs which in turn have been more and more strengthened by those habits. To replace these beliefs by correct ones, it is necessary to meditate on the latter constantly and think over their various implications for life. In short, to instil right beliefs into our minds, we have to go through the same long and tedious process, though of a reverse kind, by which wrong beliefs were established in us. This requires a long intellectual concentration on the truths learned. Without prolonged meditation the opposite beliefs cannot be removed and the belief in these truths cannot be steadied and established in life.

Self-control (*saṁyama*) also is necessary for concentration of the mind on these

(7) Self-control is needed to remove passions that obstruct concentration and good conduct.

truths and for making these effective in life. Socrates used to say ' virtue is knowledge.' His followers pointed out that mere knowledge of what is right, does not always lead to right actions, because our actions are guided as much by reason as by blind animal impulses. Unless these impulses are controlled, action cannot fully follow the dictates of reason. This truth is recognized by all the Indian systems, except perhaps the Cārvāka. It is neatly expressed by an oft-quoted Sanskrit saying which means: "I know what is right, but feel no inclination to follow it ; I know what is wrong but cannot desist from it."

Our speech and action cannot always follow our intellectual convictions because of the contrary impulses deeply rooted in our character due to past misconceptions about things and their values. These impulses are variously described by different Indian thinkers ; but there is a sort of unanimity that the chief impulses are likes and dislikes—love and hate (*rāga* and *dveṣa*). These are the automatic springs of action ; we move under their influence when we act habitually without forethought. Our *indriyas*, i.e. the instruments of knowledge and action (namely, the mind, the senses of sight, touch, smell, taste, sound, and the motor organs for movement, holding things, speaking, excretion and reproduction) have always been in the service of these blind impulses of love and hate and they have acquired some fixed bad habits. When the philosophic know-

ledge about the real nature of things makes us give up our previous wrong beliefs regarding objects, our previous likes and dislikes for those objects have also to be given up. Our indriyas have to be weaned from past habits and broken to the reign of reason. This task is as difficult as it is important. It can be performed only through long, sustained practice and formation of new good habits. All Indian thinkers lay much stress on such practice which chiefly consists of repeated efforts in the right direction (*abhyāsa*).

Self-control, then, means the control of the lower self, the blind, animal tendencies—love and hate—as well as the instruments of knowledge and action (the indriyas). From what has been said above it will be clear that self-control was not a mere negative practice, it was not simply checking the indriyas, but checking their bad tendencies and habits in order to employ them for a better purpose, and make them obey the dictates of reason.

It is a mistake, therefore, to think, as some do, that Indian ethics taught a rigorism or asceticism which consists in killing the natural impulses in man. As early as the Upaniṣads, we find Indian thinkers recognizing that though the most valuable thing in man is his spirit (*ātman*), his existence as a man depends on non-spiritual factors as well ; that even his thinking power depends on the food he takes. This conviction never left the Indian thinkers ; the lower elements, for them, were not for destruction but for reformation and subjugation to the higher. Cessation from bad activities was coupled with performance of good ones. This we find even in the most rigoristic systems, like the Yoga, where, as aids to the attainment

Self-control implies the bringing of the lower self under the control of the higher.

It does not kill the natural impulses, but trains them to the yoke of reason.

Morality is not merely negative, but needs the cultivation of positive virtues.

of perfect concentration (yogāṅga), we find mentioned not simply the negative practice of the 'don'ts' (yamas), but also the positive cultivation of good habits (niyamas). The yamas consist of the five great efforts for abstinence from injury to life, falsehood, stealing, sensuous appetite and greed for wealth (ahiṁsā, satya, asteya, brahmacharya and aparigraha). These are to be cultivated along with the niyamas, namely, purity of body and mind, contentment, fortitude, study and resignation to God. Essentially similar teachings we find as much in the other orthodox schools as in Buddhism and Jainism which, like the Yōga, recommend, for example, the cultivation of love (maitrī) and kindness (karuṇā) along with non-violence (ahiṁsā). That the action of the indriyas is not to be suppressed, but only to be turned to the service of the higher self, is also the teaching of the Gītā, as would appear from the following: "One who has controlled himself attains contentment by enjoying objects through the indriyas which have been freed from the influence of love and hate."¹

Lastly, all Indian systems, except the Cārvāka, accept the idea of liberation as the

(8) Belief in the possibility of liberation is common to all systems. Liberation is regarded as the highest good.

highest end of life. The conception of liberation received, of course, slightly different meanings.

All negatively agreed that the state of liberation is a total destruction of sufferings which life in this world brings about. A few went a little beyond this to hold that liberation or the state of perfection is not simply negation of pain, but is a state of positive bliss. The Mīmāṃsā, Vedānta and Jaina thinkers belong to this latter group, and even the Bauddhas, according to some.

¹ Bhagavadgītā, 2.64.

7. *The Space-Time Background*

In addition to the unity of moral and spiritual outlook described above, we may also note the prevailing sense of the vastness of the space-time world, which formed the common background of Indian thought and influenced its moral and metaphysical outlook.

The idea of the vastness of the world of space and time formed the common background of Indian thought.

Modern scientific conception of Time and Space as inconceivably vast entities.

The Western belief that the world was created six thousand and odd years ago and all for the purpose of man, constituted a narrowness of outlook and exaggerated the importance of man. This belief has been shaken by the biological discoveries of Darwin and others who show that the evolution of living beings has to be conceived in terms of millions of years, not thousands. The science of astronomy, again, is gradually generating the belief in the vastness of the universe, the diameter of which is "at least hundreds of millions of light-years."¹ The sun in this calculation is a mere speck in the universe, and the earth is less than one-millionth part of this speck. And we are reminded that each faint speck of nebula observable in the sky contains "matter enough for the creation of perhaps a thousand million suns like ours."²

¹ Sir J. H. Jeans in *Nature*, 28-2-27. A light-year = the distance travelled by light in a year, at the rate of 186,325 miles per sec. = $60 \times 60 \times 24 \times 365 \times 186,325$ miles = 5,875,945,200,000 miles.

² *Ibid.* (quoted in *Everyday Science*, by L. M. Parsons, pp. 14-16).

Our imagination feels staggered in its attempt to grasp the vastness of the space-time universe revealed by science.

Similar ideas in
Indian literature.

A similar feeling is caused by the accounts of creation given in some of the Purāṇas, which would, but for modern discoveries, be laughed at as pure fantasy. In the Viṣṇu-Purāṇa, for example, we come across the popular Indian conception of the world (brahmāṇḍa) which contains the fourteen regions (lokas) of which the earth (bhūtala) is only one and which are separated from one another by tens of millions (koṭis) of yojanas, and again the infinite universe is conceived as containing thousands of millions of such worlds (brahmāṇḍas).

As to the description of the vastness of time, we find that the Indian thinker, like the modern scientist, feels unable to describe it by common human units. The unit adopted for the measurement of cosmic time is a day of the creator Brahmā. Each day of the creator is equal to 1,000 yugas or 432 million years of men. This is the duration of the period of each creation or cosmos. The night of the creator is cessation of creative activity and means destruction or chaos. Such alternating days and nights, creation and destruction (araṇi and pralaya) form a beginningless series.

It is not possible to ascertain the first beginning of creation. It would be arbitrary to think that creation began *at first* at some *particular time* and not earlier. As there are no data for fixing the *first* beginning of the universe, Indian thinkers, in general, look upon the universe as beginningless (anādi). They try to explain

the beginning of the present creation by reference to previous states of dissolution and creation and think it idle and meaningless to enquire about the *first* creation. Any term of a beginningless series can only be said to be earlier or later in *relation* to others ; there is nothing like an *absolute first* term in such a series.

With this overwhelming idea of the vast universe at its background, Indian thought naturally harped on the extreme smallness of the earth, the transitoriness of earthly existence and the insignificance of earthly possessions. If the earth was a mere point in the vast space, life was a mere ripple in the ocean of time. Myriads of them come and go, and matter very little to the universe as a whole. Even the best civilization evolved through centuries is nothing very unique ; there is not one golden age only in the life of the earth. In the beginningless cycles of creation and dissolution there have been numberless golden ages as well as iron ones. Prosperity and adversity, civilization and barbarity rise and fall, as the wheel of time turns and moves on.

The general influence of this outlook on metaphysics, has been to regard the present world as the outcome of a past one and explain the former partly by reference to the latter. Besides it set metaphysics on the search for the eternal. On the ethical and religious side, it helped the Indian mind to take a wider and detached view of life, prevented it from the morbid desire to cling to the fleeting as the everlasting and persuaded it always to have an eye on what was of lasting, rather than of momentary value.

II. A BRIEF SKETCH OF THE SYSTEMS

1. *The Cārvāka System*

In Indian philosophy the word 'Cārvāka' means a materialist. The Cārvākas hold that perception is the only valid source of knowledge. They point out that all non-perceptual or indirect sources of knowledge like inference, the testimony of other persons, etc., are unreliable and often prove misleading. We should not, therefore, believe in anything except what is immediately known through perception.

Perception reveals to us only the material world, composed of the four bhūtas or elements of matter, viz. air, fire, water and earth, the existence of which we can directly know through the senses. All objects of this perceptible world are composed of these elements. There is no evidence that there is anything like an immaterial soul in man. Man too is made wholly of matter. We say 'I am stout,' 'I am lean,' 'I am lame.' These judgments are alleged to prove that the individual is identical with the body. There is of course consciousness in man, but consciousness is a quality of the living body which is a product of matter. It should not be thought that because the elements of matter are unconscious, there can be no consciousness in objects made of them. There are many examples in which qualities originally absent in the component parts are developed when the parts are combined together in a particular way. There are examples even of the same substance acquiring new qualities under

different conditions. Betel leaf, nut and lime chewed together acquire a red tinge originally absent in any of the constituents ; molasses acquires by fermentation the power of intoxication originally absent. Similarly, the elements of matter combined together in a particular way give rise to the living body having consciousness. Consciousness ceases apparently with the body. When man dies nothing is left of him to enjoy or suffer the consequences of his actions hereafter.

The survival of man in any form after death is, therefore, unproved. The existence of God also is a myth. God cannot be perceived. The world is made by the automatic combination of the material elements and not by God. It is foolish, therefore, to perform any religious rite either for enjoying happiness after this life in heaven or for pleasing God. No faith should be put in the Vedas or in the cunning priests who earn their livelihood by exploiting the credulity of men.

The highest end of life, for a rational man, should, therefore, be the enjoyment of the greatest amount of pleasure here in this life, of which alone we are sure. It is foolish to forgo the pleasures of life simply because they happen to be mixed with pain. It would be as though one were to reject the kernel because of its husk or cease sowing crops for fear of cattle. We should try to get the best out of this life by enjoying it as best as we can and avoiding as far as possible the chances of pain.

2. *The Jaina System*

The origin of the Jaina faith lies far back in the prehistoric times. The long line of teachers through

whom the faith was handed down consists of twenty-four Tīrthaṅkaras or liberated propagators of the faith, the last of whom was Vardhamāna (also styled Mahāvīra), a contemporary of Gautama Buddha.

The Jainas reject the Cārvāka view that perception is the only valid source of knowledge. They point out that if we are to reject altogether the possibility of obtaining correct knowledge through inference and the testimony of other persons because sometimes they prove misleading, we should doubt the validity of perception also, because even perception sometimes proves illusory. In fact, the Cārvākas themselves take the help of inference when by observing *some* cases of inference to be misleading they come to hold that *all* inference is invalid, and also when they deny the existence of objects *because* they are not perceived. The Jainas admit, in addition to perception, inference and testimony as sources of valid knowledge. Inference yields valid knowledge when it obeys the logical rules of correctness. Testimony is valid, when it is the report of a reliable authority. In fact, the Jainas hold that it is on the authority of the teachings of the omniscient liberated saints (Jinas or Tīrthaṅkaras) that we can have unerring knowledge about certain spiritual matters, which our limited sense-perception and reasoning cannot reveal to us.

On the basis of these three kinds of knowledge, the Jainas form their view of the universe. Perception reveals the reality of material substances, composed of the four kinds of elements, as the Cārvākas hold. By inference they come to believe in space (ākāśa), because material substances must exist somewhere, believe in

time (*kāla*), because changes or succession of the states of substances cannot be understood without it, and believe also in the two causes of motion and rest respectively, for without them movement and cessation of movement in things cannot be explained. These last two are called respectively *dharma* and *adharma* which should not be taken here in their ordinary moral sense, but in the technical sense of the causes of motion and rest. But the physical world, consisting of the four elements of matter, space, time, *dharma* and *adharma*, is not all. Perception, as well as inference, proves the existence of souls in all living bodies. When we perceive the qualities of an orange such as its colour, shape, smell, we say we perceive the existence of the orange. On similar grounds, when we internally perceive pleasure, pain and other qualities of the soul, we should admit that the soul also is directly known through perception. Consciousness cannot be said to be the product of matter ; the Cārvākas cannot point out any case where the combination of material substances is *perceived* to generate consciousness. The existence of the soul can also be inferred on the ground that if there had been no conscious agent to guide them, material substances could not be formed into living bodies by themselves. Without a conscious substance to regulate them the body and the senses could not do their work so systematically.

There are, then, as many souls as there are living bodies. There are souls, the Jainas hold, not only in animals, but also in plants and even in particles of dust. The existence of very minute living beings

(such as germs) in dust and other apparently non-living material things is also admitted by modern science. All souls are not equally conscious. Some, like those in plants or dust-bodies, have only the sense of touch and have tactual consciousness alone. Some lower animals have two senses, others three, still others four. Man and some higher animals have five senses through all of which they know things. But, however developed the senses may be, the soul living in the body is limited in knowledge ; it is limited in power also and is subject to all kinds of miseries.

But every soul is capable of attaining infinite consciousness, power and happiness. These qualities are inherent in the very nature of the soul. They are obstructed by karmas, just as the natural light of the sun is obstructed by clouds. The karmas or the forces of passions and desires in the soul attract to it particles of matter which permeate the soul just as particles of dust permeate the light of any flame or the sun. In a word, the karmas lead to the bondage of the soul by matter. By removing karmas a soul can remove bondage and regain its natural perfections.

The teachings and lives of the liberated saints (Tirthaṅkaras) prove the possibility of liberation and show also the path to be followed for the purpose. Three things are necessary for the removal of bondage, *viz.* perfect faith in the teachings of the Jaina teachers, correct knowledge of the teachings, and right conduct. Right conduct consists in the practice of abstinence from all injury to life, from falsehood, from stealing, from sensuality and from attachment to sense objects. By the joint culture of right faith,

right knowledge and right conduct the passions are controlled and the karmas that fetter the soul to matter are removed. The obstacles being removed, the soul attains its natural perfection—*infinite faith infinite knowledge, infinite power and infinite bliss*. This is the state of liberation.

The Jainas do not believe in God. The Tirthankaras, to whom all the godly powers like omniscience and omnipotence belong, take the place of God. They are adored as ideals of life.

Sympathy for all living beings is one of the chief features of the Jaina faith. Coupled with this there is, in Jaina philosophy, respect for all opinions. The Jaina philosophers point out that every object has infinite aspects, judged by what it is and what it is not from different points of view. Every judgment that we ordinarily pass about a thing is, therefore, true only in relation to a particular aspect of the thing seen from a particular point of view. We should remember, therefore, the limited nature of our knowledge and judgment, and should refrain from thinking that any view is the whole truth about any thing. We should guard and qualify our own statements and also learn to appreciate the possibility of the correctness of others' views.

The Jaina philosophy is a kind of realism, because it asserts the reality of the external world, and it is pluralism, because it believes in many ultimate realities. It is atheism as it rejects the existence of God.

3. *The Bauddha System*

The Bauddha system of philosophy arose out of the teachings of Gautama Buddha, the well-known

founder of Buddhism. Gautama was awakened to an appreciation of sorrow by the sight of disease, old age, death and other miseries, to which man is subject. He spent years in study, penance and meditation to discover the origin of human sufferings and the means to overcome them. At last he received enlightenment, the result of which was set forth by him in the form of what has come to be known as 'the four noble truths' (catvāri ārya-satyāni). These are—the truth that there is misery, the truth that there is a cause of misery, the truth that there is cessation of misery and the truth that there is a path leading to the cessation of misery.

The first truth about the existence of misery is admitted by all in some form or other. But Buddha with his penetrative intellect saw that misery is not simply casual; it is universally present in all forms of existence and in all kinds of experience. Even what appears as pleasant is really a source of pain at bottom.

Regarding the second truth, Buddha's conclusion is deduced from his analysis of causation. He points out that the existence of everything in the world, material and mental, is caused by some other thing. There is nothing which is unconditional and self-existent. Nothing is, therefore, permanent in the world. All things are subject to change. Our sufferings are similarly caused by some conditions. Sufferings depend on birth in this world. Birth again is caused by our desire (taṇhā or tṛṣṇā) for the worldly objects. The force of desires drags us down to the world. But our desires can be traced ultimately to

our ignorance. If we had a correct knowledge of the things of the world, understood their transitory and painful nature, there would be no desire for them ; birth would then cease and along with it also misery.

As suffering, like other things, depends on some conditions, it must cease when these conditions are removed. This is the third truth about cessation.

The fourth truth about the path that leads to the cessation of misery concerns the control of the conditions that cause misery. This path is known as the eight-fold noble path as it consists of the eight steps, namely, right views, right determination, right speech, right conduct, right livelihood, right endeavour, right mindfulness and right concentration. These eight steps remove ignorance and desire, enlighten the mind and bring about perfect equanimity and tranquillity. Thus misery ceases completely and the chance of rebirth also is stopped. The attainment of this state of perfection is nirvāṇa.

The teachings of Buddha are contained in the four noble truths described above. It will appear from this that Buddha himself was not concerned so much with the problems of philosophy as with the practical problem how human misery can be removed. He regarded it as a waste of time to discuss metaphysical problems, while man is writhing in misery. But though averse to theoretical speculation he could not avoid philosophical discussions altogether. Thus we find from early literature that the following theories are attributed to him: (a) All things are conditional ;

there is nothing that exists by itself. (b) All things are, therefore, subject to change, owing to the change of the conditions on which they depend ; nothing is permanent. (c) There is, therefore, neither any soul nor God nor any other permanent substance. (d) There is, however, continuity of the present life which generates another life, by the law of karma, just as a tree generates another tree through its seed, and the second continues while the first withers away.

The later followers of Buddha in India and outside developed the germs of philosophical theories contained in Buddha's teachings and many schools thus came into existence. Of these the four that became most well-known in Indian philosophy may be mentioned here.

The Mādhyamika or Sūnyavādi School.—According to this, the world is unreal (sūnya); mental and non-mental phenomena are all illusory. This view is known as nihilism (sūnyavāda).

The Yogācāra or Vijñānavāda School.—This holds that external objects are unreal. What appears as external is really an idea in the mind. But mind must be admitted to be real. It is self-contradictory to say that the mind is unreal ; for, then, the very thought that mind is unreal stands self-condemned, thought being an activity of the mind. This view is called subjective idealism (vijñānavāda).

The Sautrāntika School.—This holds that both the mental and the non-mental are real. If everything that we perceive as external were unreal, then our perception of an object would not depend on anything outside the mind, but absolutely on the mind.

But we find that the mind cannot perceive any object, like a tiger, at any place it likes. This proves that the idea of the tiger, when we perceive it, depends on a non-mental reality, the tiger. From the perceptual idea or representation of a tiger in the mind we can infer the existence of its cause, the tiger, outside the mind. Thus external objects can be inferred to exist outside the mind. This view may be called representationism, or theory of the inferability of external objects (*bāhyānumeya-vāda*).

The Vaibhāṣika School.—This school agrees with the last on the point that both internal and external objects are real. But it differs from it regarding the way external objects are known. External objects, according to the Vaibhāṣikas, are *directly perceived* and not inferred from their ideas or representations in the mind. For if no external object were ever *perceived* corresponding to any idea, it would not be possible to infer the existence of an external object from any idea. This view may be called direct realism, because it holds that external objects are perceived directly (*bāhya-pratyakṣa-vāda*).

Buddhism is divided, on religious matters, into the two well-known schools, Hīnayāna, flourishing now in the south, in Ceylon, Burma and Siam, and Mahāyāna, found now in the north, in Tibet, China and Japan. The first two of the four philosophical schools mentioned above come under the Mahāyāna and the last two under the Hīnayāna. The most important religious question on which these two schools differ is: What is the object of nirvāṇa? The Hīnayāna holds that nirvāṇa should be sought in order that the

individual may put an end to his own misery. The Mahāyāna thinks, on the other hand, that the object of nirvāṇa is not to put an end to one's own misery, but to obtain perfect wisdom with which the liberated can try for the salvation of all beings in misery.

4. *The Nyāya System*

The Nyāya system is the work of the great sage Gotama. It is a realistic philosophy based mainly on logical grounds. It admits four separate sources of true knowledge, *viz.* perception (*pratyakṣa*), inference (*anumāna*), comparison (*upamāna*) and testimony (*śabda*). Perception is the direct knowledge of objects produced by their relation to our senses. It may be external (*bāhya*) or internal (*āntara*), according as the sense concerned is external, like the eye and the ear, or internal, like the mind (*manas*). Inference is the knowledge of objects, not through perception, but through the apprehension of some mark (*liṅga*) which is invariably related to the inferred object (*sādhya*). The invariable relation between the two is called *vyāpti*. In inference there are at least three propositions and at most three terms, *viz.* the *pakṣa* or minor term about which we infer something, the *sādhya* or major term which is the inferred object, and the *liṅga* or *sādhana* or middle term which is invariably related to the major, and is present in the minor. To illustrate: "The hill is fiery, because it smokes; and whatever smokes is fiery." Comparison is the knowledge of the relation between a name and things so named on the basis of a given description of their similarity to some familiar object. A man is told

that a *gavaya* is like a cow. Then he finds an animal in the forest, which strikingly resembles the cow, and concludes that this animal must be a *gavaya*. Such knowledge is derived from *upamāna* or comparison. *Śabda* or testimony is the knowledge about unperceived objects derived from the statements of authoritative persons. A scientist tells us that water is a compound of hydrogen and oxygen in a certain proportion. Although we have not ourselves demonstrated the truth, we know it on the authority of the scientist. Here our knowledge is derived from *śabda* or testimony. All other sources of knowledge have been reduced by the Naiyāyikas to these four.

The objects of knowledge, according to the Nyāya, are the self, the body, the senses and their objects, cognition (*buddhi*), mind (*manas*), activity (*pravṛtti*), mental defects (*doṣa*), rebirth (*pretyabhāva*), the feelings of pleasure and pain (*phala*), suffering (*duḥkha*), and freedom from suffering (*apavarga*). The Nyāya, like many other systems of Indian philosophy, seeks to deliver the self from its bondage to the body, the senses and their objects. According to it, the self is distinct from the body and the mind. The body is only a composite substance made of matter. The mind is a subtle, indivisible and eternal substance (*aṇu*). It serves the soul as an instrument for the perception of psychic qualities like pleasure, pain, etc. It is, therefore, called an internal sense. The self (*ātman*) is another substance which is quite distinct from the mind and the body. It acquires the attribute of consciousness when it is related to any object through the senses. But

consciousness is not an essential quality of the self. It is an accidental or adventitious quality which ceases to qualify the self in the state of mukti or liberation. While the mind (*manas*) is infinitesimal like an atom, the self is all-pervading (*vibhu*), indestructible and eternal. It is an agent which likes and dislikes objects and tries to obtain or avoid them and enjoys or suffers the consequences of its actions. It is ignorance of the truth (*mithyā-jñāna*) and the consequent faults of desire, aversion and infatuation (*rāga, dveṣa* and *moha*) that impel the self to act for good and bad ends and plunge it into the world of sin and suffering, birth and death. Liberation (*apavarga*) means the absolute cessation of all pain and suffering due to the right knowledge of reality (*tattva-jñāna*). Some people think that it is a state of happiness. But this is entirely wrong, for there is no pleasure without pain, just as there is no light without shade. So liberation is only release from pain and not pleasure or happiness.

The existence of God is proved by the Naiyāyikas by several arguments. God is the ultimate cause of the creation, maintenance and destruction of the world. He did not create the world out of nothing, but out of eternal atoms, space, time, ether, minds and souls. This world has been created in order that individual souls (*jīva*) might enjoy pleasure or suffer pain according to the merit or demerit of their actions in other lives and in other worlds. The most popular argument for God's existence is this: " All things of the world like mountains and seas, the sun and the moon, are effects, because they are made up of parts.

Therefore, they must have a maker (kartā).” The individual selves cannot be the maker or creator of the world, because they are limited in power and knowledge, and so cannot deal with such subtle and imperceptible entities as atoms, of which all physical things are composed. The creator of the world must be an intelligent spirit with unlimited power and wisdom, and capable of maintaining the moral order of the universe. God created the world not for any end of His own, but for the good of all living beings. This, however, does not mean that there must be only happiness and no misery in the world. If individual selves have any freedom of will in them, they would act for good or bad ends and thereby bring happiness or misery on themselves. But under the loving care and wise guidance of the divine being, all individuals can sooner or later attain right knowledge about themselves and the world, and thereby final release from all suffering (mukti).

5. *The Vaiśeṣika System*

The Vaiśeṣika system was founded by the sage Kaṇāda whose real name is Uluka. It is allied to the Nyāya system and has the same end in view, namely, the liberation of the individual self. It brings all objects of knowledge, i.e. the whole world, under the seven categories of substance (dravya), quality (guṇa), action (karma), generality (sāmānya) particularity (viśeṣa), the relation of inherence (samavāya), and non-existence (abhāva).

A substance is the substratum of qualities and activities, but is different from both. There are nine

kinds of substances, viz. earth, water, fire, air, ether (ākāśa), time, space, soul and mind (manas). Of these, the first five are called the physical elements (bhūta) and have respectively the specific qualities of smell, taste, colour, touch and sound. The first four are composed of the four kinds of atoms of earth, water, fire and air, which are indivisible and indestructible particles of matter. The atoms are uncreated and eternal entities which we get by breaking any material object into smaller and smaller parts till we come to such as cannot be further divided. Ākāśa, space and time are imperceptible substances, each of which is one, eternal and all-pervading. The mind (manas) is an eternal substance which is not all-pervading, but infinitely small like an atom. It is the internal sense which is directly or indirectly concerned in all psychical functions like cognition, feeling and willing. The mind being atomic we cannot have more than one experience at one instant of time. The soul is an eternal and all-pervading substance which is the substratum of the phenomena of consciousness. The individual soul is perceived internally by the mind of the individual as when one says 'I am happy.' The supreme soul or God is inferred as the creator of the world of effects.

A quality is that which exists in a substance and has itself no quality or activity. While a substance can exist by itself, a quality cannot exist unless it be in some substance. There is no activity or movement in the qualities of things. There are altogether twenty-four kinds of qualities, viz. colour, taste, smell, touch, sound, number, magnitude, differ-

entia (*prthaktva*), conjunction (*saṁyoga*), disjunction (*vibhāga*), remoteness (*paratva*), nearness (*aparatva*), fluidity (*dravatva*), viscosity (*sneha*), cognition (*buddhi*), pleasure, pain, desire, aversion, striving (*prayatna*), heaviness (*gurutva*), faculty (*saṁskāra*), merit (*dharma*) and demerit (*adharma*).

An action is a movement. Like quality, it belongs only to substances. There are five kinds of action, viz. throwing upward (*utkṣepaṇa*), throwing downward (*avakṣepaṇa*), contraction (*ākuñcana*), expansion (*prasāraṇa*), and going (*gamana*).

All cows have in them a certain common nature for which they are grouped into one class and excluded from other classes. This is called 'gotva' or cowness and is the *sāmānya* or universal in them. Since cowness is not generated by the birth of any cow nor destroyed by the death of any, it is eternal. A universal is thus the eternal essence common to all the individuals of a class.

Particularity (*viśeṣa*) is the ground of the ultimate differences of things. Ordinarily, we distinguish one thing from others by the differences of its parts and other qualities. But how are we to distinguish the ultimate simple and eternal substances of the world, like two atoms of earth? There must be some ultimate difference or peculiarity in each of them, otherwise they would not be different, both having all the qualities

1 ' *Paratva* ' stands for both remoteness in space and remoteness in time and ' *aparatva* ' for nearness both in space and time. ' *Samskāra* ' really stands for three qualities, viz. velocity, elasticity and memory-impression.

of earth. Particularity stands for the peculiarity or individuality of the eternal entities of the world. It is the special treatment of this category of *viśeṣa* that explains the name ' *Vaiśeṣika* ' given to this system of philosophy.

Inherence (*samavāya*) is the permanent or eternal relation by which a whole is in its parts, a quality or an action is in a substance, the universal is in the particulars. The cloth as one whole always exists in the threads, qualities like ' green,' ' sweet ' and ' fragrant,' and motions of different kinds abide in some substance. This permanent relation between the whole and its parts, between the universal and its individuals, and between qualities or actions and their substances, is known as *samavāya* or inherence.

Non-existence (*abhāva*) stands for all negative facts. ' There is no snake here,' ' that rose is not red,' ' there is no smell in pure water ' are propositions which express respectively the non-existence of the snake, redness and smell in certain things. All such cases of non-existence are brought under the category of *abhāva*. It is of four kinds, namely, *prāgabhāva*, *dhvainsābhāva*, *atyantābhāva* (these three being put together under *samsargābhāva* or the absence of a relation between two entities), and *anyonyābhāva*. The first means the non-existence of a thing before (*prāk*) its production, e.g. the non-existence of a pot in clay before it is produced by the potter. The second is the non-existence of a thing after its destruction (*dhvāna*), e.g. the non-existence of the pot when it is broken up. The third is the absence of a relation between two things for all time—past, present and

future, e.g. the non-existence of colour in the air. The last kind represents the difference of one thing from another. When two things (say a jar and a cloth) differ from each other, there is the non-existence of either as the other. The jar is not the cloth, nor is the cloth the jar. This mutual non-existence of two different things is called anyonyābhāva.

With regard to the liberation of the individual soul and God, the Vaiśeṣika theory is substantially the same as that of the Nyāya.

6. *The Sāṅkhya System*

The Sāṅkhya is a philosophy of dualistic realism, attributed to the sage Kapila. It admits two ultimate realities, namely, puruṣa and prakṛti, which are independent of each other in respect of their existence. The puruṣa is an intelligent principle, of which consciousness (caitanya) is not an attribute, but the very essence. It is the self which is quite distinct from the body, the senses and the mind. It is beyond the whole world of objects, and is the eternal consciousness which witnesses the changes and activities going on in the world, but does not itself act and change in any way. Physical things like chairs, beds, etc., exist for the enjoyment of beings other than themselves. Therefore, there must be the puruṣa or the self which is distinct from prakṛti or matter, but it is the enjoyer (bhoktā) of the products of prakṛti. There are many different selves related to different bodies, for when some men are happy, others are unhappy, some die but others live.

Prakṛti is the ultimate cause of the world. It is an eternal unconscious principle (jaḍa) which is always changing and has no other end than the satisfaction of the selves. Sattva, rajas and tamas are three constituents of prakṛti which holds them together in a state of rest or equilibrium (sāmyāvasthā). The three are called guṇas. But they are not qualities or attributes in any sense. Rather, they are three substantial elements which constitute prakṛti like three cords making up a rope. The existence of the guṇas is inferred from the qualities of pleasure, pain and indifference which we find in all things of the world. The same sweet is liked or disliked or treated with indifference by the same man in different conditions. The same salad is tasteful to some person, distasteful to another and insipid to a third. Now the cause and the effect are essentially identical. The effect is the manifested condition of the cause, e.g. oil as an effect manifests what is already contained in the seeds. The things of the world are effects which have the qualities of pleasure, pain and indifference. Therefore, prakṛti or pradhāna which is their ultimate cause must have the three elements of sattva, rajas and tamas which respectively possess the natures of pleasure, pain and indifference, and cause manifestation, activity and passivity.

The evolution of the world has its starting-point in the association (saṁyoga) of the puruṣa with prakṛti, which disturbs the original equilibrium of the latter and moves it to action. The course of evolution is as follows: From prakṛti arises the great germ of this vast universe which is called, therefore, the great one

(mahat). The consciousness of the self is reflected on this and makes it appear as conscious. It represents the awakening of nature from her cosmic slumber and the first appearance of thought ; and, therefore, it is also called the Intellect (buddhi). It is the creative thought of the world to be evolved. Ahaṅkāra, the second product arises by a further transformation of the Intellect. The function of ahaṅkāra is the feeling of ' I and mine ' (abhimāna). Owing to its identification with this principle, the self considers itself to be an agent (kartā) which it really is not. From ahaṅkāra, with an excess of the element of sattva, arise the five organs of knowledge (jñānendriya), the five organs of action (karmendriya) and the mind (manas) which is at once an organ of knowledge and activity (ubhayendriya). With an increase of tamas, ahaṅkāra produces, on the other hand, the five subtle elements (tanmātra) which are the essences of sound, touch, colour, taste and smell. From the five subtle elements come the five gross elements of ākāśa or ether, air, fire, water and earth in the same order. Thus we have altogether twenty-five principles in the Sāṅkhya. Of these, all but the puruṣa is comprised by prakṛti which is the cause or the ultimate source of all other physical objects. Prakṛti is the uncaused cause of all objects. The seven principles of mahat, ahaṅkāra and the five tanmātras are causes of certain effects and themselves effects of certain causes. The eleven senses and the five gross elements are only the effects of certain causes and not themselves the causes of anything which is substantially different from them. The puruṣa or the self is neither the cause (prakṛti) nor the effect (vikṛti) of anything.

Although the self is in itself free and immortal, yet such is the influence of avidyā or ignorance that it confuses itself with the body, the senses and the mind. It is the want of discrimination (aviveka) between the self and the not-self that is responsible for all our sorrows and sufferings. We feel injured and unhappy when our *body* is injured or indisposed, because we fail to realize the distinction between the self and the body. Similarly, pleasure and pain in the mind seem to affect the self only because the self's distinction from the mind is not clearly perceived by us. Once we realize the distinction between the self and the not-self including the body and the senses, the mind, the intellect and the ego (viveka-jñāna), our self ceases to be affected by the joys and sorrows, the ups and downs of life. It rests in itself as the dispassionate observer of the show of events in the world without being implicated in them. This is the state of liberation or freedom from suffering which has been variously described as mukti, apavarga, kaivalya, etc. It is possible for us to attain this state while alive in this world (jīvanmukti) or after this life in the other world (videhamukti). But mere knowledge or intellectual understanding of the truth will not help one to realize one's self and thereby attain final release from sin and suffering. For this we require to go through a long course of spiritual training with deep devotion to, and constant meditation on, the truth that the self is the pure eternal consciousness which is beyond the mind-body complex and above the space-time and cause-effect order of existence. It is the unborn and undying spirit, of which the essence is freedom,

immortality and life eternal. The nature and methods of the spiritual training necessary for self-realization have been elaborated in the Yoga philosophy.

With regard to the problem of God, we find that the main tendency of the Sāṅkhya is to do away with the theistic belief. According to it, the existence of God cannot be proved in any way. We need not admit God to explain the world ; for, prakṛti is the adequate cause of the world as a whole. God as eternal and unchanging spirit cannot be the creator of the world ; for to produce an effect the cause must change and transform itself into the effect. Some Sāṅkhya commentators and writers, however, try to show that the system admits the existence of God as the supreme person who is the witness but not the creator of the world.

7. *The Yoga System*

The sage Patañjali is the founder of the Yoga philosophy. The Yoga is closely allied to the Sāṅkhya. It accepts the epistemology and the metaphysics of the Sāṅkhya with its twenty-five principles, but adds one more, viz. God. The special interest of this system is in the practice of yoga as the means to the attainment of vivekajñāna or discriminative knowledge which is held in the Sāṅkhya to be the essential condition of liberation. According to it, yoga consists in the cessation of all mental functions (citta-vṛttinirodha). There are five levels of mental functions (cittabhūmi). The first is called kṣipta or the dissipated condition in which the mind flirts among objects. The second is mūḍha or the stupefied condition as in sleep. The third is called

vikṣipta or the relatively pacified condition. Yoga is not possible in any of these conditions. The fourth and the fifth level are called *ekāgra* and *niruddha*. The one is a state of concentration of the mind on some object of contemplation. The other is the cessation of even the act or function of contemplation. The last two levels of the mind (*cittabhūmi*) are conducive to yoga. There are two kinds of yoga or *samādhi*, viz. *samprajñāta* and *asamprajñāta*. In the first, we have yoga in the form of the mind's perfect concentration on the object of contemplation, and, therefore, involving a clear apprehension of that object. In the second, there is the complete cessation of all mental modifications and, consequently, the entire absence of all knowledge including that of the contemplated object.

There are eight steps in the practice of yoga (*yogāṅga*). These are: *yama* or restraint, *niyama* or ethical culture, *āsana* or posture, *prāṇāyāma* or breath-control, *pratyāhāra* or withdrawal of the senses, *dhāraṇā* or attention, *dhyāna* or meditation and *samādhi* or concentration. *Yama* or restraint consists in abstaining from injury to any life, from falsehood, theft, incontinence and avarice. *Niyama* or ethical culture is the cultivation of good habits like purification, contentment, penance, study of the Vedas and contemplation of God. *Āsana* is the adoption of steady and comfortable postures. *Prāṇāyāma* or breath-control is regulated inhalation, exhalation and retention of breath. *Pratyāhāra* or sense-control consists in withdrawing the senses from their objects. *Dhāraṇā* or attention is fixing the mind on some intra-organic or extra-organic object like the moon, etc. *Dhyāna* or

meditation is the steady contemplation of the object without any break. *Samādhi* or concentration is that state in which the contemplative consciousness is lost in the contemplated object and has no awareness of itself.

The Yoga system is called the theistic (*śeśvara*) Sāṅkhya as distinguished from the Kapila Sāṅkhya which is generally regarded as atheistic (*nirīśvara*). It holds that God is the highest object of contemplation for concentration and self-realization. He is the perfect Being who is eternal, all-pervading, omniscient and completely free from all defects. The Yoga argues for the existence of God on the following grounds: Whatever has degrees must have a maximum. There are degrees of knowledge; therefore, there must be such a thing as perfect knowledge or omniscience. He who has omniscience is God. The association of *puruṣa* with *prakṛti* is what initiates the evolution of the world, and the cessation of this leads to dissolution. Neither the association nor the dissociation is natural to *prakṛti* and *puruṣa*. Therefore, there must be a supreme being who is able to bring about these relations between *prakṛti* and *puruṣa* according to the moral deserts of individual souls.

8. *The Mīmāṃsā System*

The Mīmāṃsā (or Pūrva-Mīmāṃsā) school was founded by Jaimini. Its primary object is to defend and justify Vedic ritualism. In course of this attempt it had to find a philosophy supporting the world-view on which ritualism depends.

As the authority of the Vedas was the basis of ritualism, the Mīmāṃsā formulates the theory that the Vedas are not the works of any person and are, therefore, free from errors that human authors commit. The Vedas are eternal and self-existing; the written or pronounced Vedas are only the temporary manifestations of these through particular seers. For establishing the validity of the Vedas, the Mīmāṃsā discusses very elaborately the theory of knowledge, the chief object of which is to show that the validity of every knowledge is self-evident. When there are sufficient conditions, knowledge arises. When the senses are sound, objects are present to them and other auxiliary conditions also prevail, there is perception. When there are sufficient data, there is inference. When we read a book on geography, we have knowledge of the lands described, through authority. In each of these cases the knowledge that arises claims to be true and we accept it without further argument. If there is any cause for doubt, then knowledge does not arise at all, because belief is absent. Similarly, by reading the Vedas we have at once knowledge and belief in what they say. The validity of Vedic knowledge is self-evident like that of every other knowledge. If any doubts arise, they are removed with the help of Mīmāṃsā arguments; and the obstacles being removed, the Vedas themselves reveal their contents to the reader. The authority of the Vedas thus becomes unquestionable.

What the Vedas command one to perform is right (dharma). What they forbid is wrong. Duty consists in doing what is right and desisting from forbidden

acts. Duty must be done in the spirit of duty. The rituals enjoined by the Vedas should be performed not with the hope of any reward but just because they are so enjoined. The disinterested performance of the obligatory rites, which is possible only through knowledge and self-control, gradually destroys the karmas and brings about liberation after death. The state of liberation is conceived in the early Mīmāṃsā as one of unalloyed bliss or heaven. But the later Mīmāṃsā conceives liberation only negatively as the cessation of birth and, therefore, of all pains.

The soul must be admitted as an immortal eternal substance, for if the soul perished on death, the Vedic injunctions that certain rites should be performed for the attainment of heaven would be meaningless. The Mīmāṃsā writers also adduce independent arguments, like the Jainas, to prove the existence of the immortal soul, and refute the materialistic view that it is nothing other than the body. But they do not admit consciousness as intrinsic to the soul. Consciousness arises in it only when it is associated with the body and then also only when an object is presented to the organs of knowledge (the five outer senses and the inner organ called *manas*). The liberated soul, which is disembodied, has no actual consciousness, though it has the potentiality for it.

The soul in the body has different kinds of knowledge. One school of the Mīmāṃsā founded by Prabhākara admits five different sources of knowledge (*pramāṇas*), namely, perception (*pratyakṣa*), inference (*anumāna*), comparison (*upamāna*), testimony (*śabda*) and postulation (*arthāpatti*). The first four

are admitted as in the Nyāya system. There is, however, one notable difference regarding comparison. According to the Mīmāṃsā, knowledge by comparison arises in a case like the following : A man who has seen a monkey goes to a forest, sees an ape and judges, 'this ape is like a monkey.' From this judgment of perception he passes to the judgment 'the monkey I saw before is like this ape.' This last knowledge is obtained by comparison and not by perception, because the monkey is not present then. Knowledge by postulation arises when we have to postulate something as the only explanation of an apparent conflict. When we find that a man does not eat anything in the day, but increases in weight, we postulate that he must be eating at night. When a man is known to be alive and yet not found at home, it is known by postulation that he exists somewhere out. Another school of the Mīmāṃsā founded by Kumārila Bhaṭṭa admits another source of valid cognition, in addition to the above five. This sixth pramāṇa is called non-cognition (*anupalabdhi*). It is pointed out that when on entering a room and looking round one says, 'there is no cloth in this room,' the non-existence of the cloth cannot be said to be known by perception. Perception of an object arises when our sense is stimulated by that object, and non-existence, which is the object known here, cannot be admitted to stimulate sense. Such knowledge of non-existence takes place by non-cognition. We judge the absence of the cloth not because other things are perceived but because the cloth is *not perceived*.

The Mīmāṃsā believes in the reality of the physical world on the strength of perception. It is, therefore,

realistic. It believes, as we have seen, in the reality of souls, as well. But it does not believe that there is a supreme soul or God who has created the world. The world's objects are formed out of matter in accordance with the karmas of the souls. The law of karma is a spontaneous moral law that rules the world. The Mīmāṃsā also admits that when any man performs any ritual, there arises in his soul a potency (*apūrva*) which produces in the future the fruit of the action at an opportune moment. On account of this potency generated in the soul by rites performed here, one can enjoy their fruits hereafter.

9. *The Vedānta System*

This system arises out of the Upaniṣads which mark the culmination of the Vedic speculation and are fittingly called the Vedānta or the end of the Vedas. As we have seen previously, it develops through the Upaniṣads in which its basic truths are first grasped, the *Brahma-sūtra* of Bādarāyaṇa which systematizes the Upaniṣadic teachings, and the commentaries written on these sūtras by many subsequent writers among whom Saṅkara and Rāmānuja are well-known. Of all the systems, the Vedānta, specially as interpreted by Saṅkara, has exerted the greatest influence on Indian life and it still persists in some form or other in different parts of India.

The idea of one Supreme Person (*puruṣa*), who pervades the whole universe and yet remains beyond it, is found in a hymn of the Ṛg-veda. All the objects of the universe, animate and inanimate, men and gods, are

poetically conceived here as parts of that Person. In the Upaniṣads this unity of all existence is found developed into the impersonal conception of One Reality (sat), or the conception of One Soul or One Brahman, all of which are used synonymously. The world is said to originate from this Reality, rest in it and return into it when dissolved. The reality of the many particular objects perceived in the universe is denied and their unity in the One Reality is asserted ever and again: All is God (sarvam khalu idaṁ Brahma). The soul is God (ayam Ātmā Brahma). There is no multiplicity here (neha nānā asti kiñcana). This Soul or God is the Reality (satya). It is Infinite consciousness (jñāna) and Bliss (ānanda).

These teachings are interpreted and developed by Rāmānuja as follows: God is the only Reality. Within him there exist as parts the different unconscious (acit) material objects as well as the many conscious souls (cit). God is possessed of all supremely good qualities like omniscience, omnipotence. God creates the world of material objects out of matter (acit) which eternally exists in Him just as a spider spins the cobweb out of its own body. The souls are conceived as infinitely small (anu) substances which also exist eternally. They are by their very nature conscious and self-luminous. Every soul is endowed with a material body in accordance with its karma. Bondage of the soul means its confinement to this body. Liberation is the complete diasociation of the soul from the body. The cause of bondage is karma which springs from ignorance. The soul identifies itself with the body, through ignorance of its real nature and behaves as

though it were the body. It hankers after sensuous pleasures. Thus it becomes attached to the world and the force of this attachment causes its repeated rebirth. Ignorance is removed by the study of the Vedānta. Man comes to know that his soul is distinct from the body, that it is really a part of God or Brahman, on whom his existence depends. The disinterested performance of the obligatory duties enjoined by the Vedas destroys the accumulated forces of attachment or karmas and helps the perfection of knowledge. God is known as the only object worthy of love and there is constant meditation on God and resignation to His will. God is pleased by devotion and releases the devotee from bondage. He is never born again after death. The liberated soul becomes *similar* to God, because like God it has pure consciousness free from imperfections. But it does *not* become *identical* with God, as the finite can never become infinite.

According to Rāmānuja, though God is the only Reality and there is nothing outside God, yet within God there are many other realities. Creation of the world and the objects created are all as real as God. It is, therefore, not unqualified monism (advaita), but a monism of the One qualified by the presence of many parts (viśiṣṭādvaita). God *possessed* of the conscious souls and unconscious matter is the only Reality.

Śaṅkara understands the Upaniṣads in a different sense. He believes that pure unqualified monism is taught there. God is the only Reality, not simply in the sense that there is nothing except God, but also in the sense that there is no multiplicity even within God. The denial of plurality, the unity of the soul and God,

the assertion that when God is known, all is known, and similar views found in the Upaniṣads, in fact the general tone that pervades their teachings, cannot be explained consistently if we believe in the existence of many realities within God. Creation of the many things by God (Brahman) or the soul (Ātman) is, of course, related in some Upaniṣads. But in others, and even in the Vedas, creation is compared to magic or jugglery ; God is spoken of as the Juggler who creates the world by the magical power called Māyā.

Śaṅkara, therefore, holds that, in consistency with the emphatic teaching that there is only One Reality, we have to explain the world not as a real creation, but as an appearance which God conjures up with his inscrutable power, Māyā. To make the conception of Māyā more intelligible to ordinary experience, he interprets it in the light of ordinary illusions that we have in daily life, when a rope appears, for example, as a snake or a glittering shell appears as silver. In all such cases of illusion there is a substratum or a reality (e.g. rope, shell) on which something else (e.g. snake, silver) is imagined or superimposed due to the ignorance of the substratum. This ignorance not only conceals the underlying reality or substratum, but also makes it appear as something else. Our perception of the world's objects can be similarly explained. We perceive the many objects in the One Brahman on account of our ignorance (avidyā or ajñāna) which conceals the real Brahman from us and makes it appear as the many objects. When the juggler produces an illusory show, makes one coin appear as many, the cause of it from *his* point of view is his magical power ; from our

point of view the reason why *we* perceive the many coins, is our *ignorance* of the one real coin. Applying this analogy to the world-appearance, we can say that this appearance is due to the magical power of *Māyā* in God and we can also say that it is due to our ignorance. *Māyā* and ignorance are then the two sides of the same fact looked at from two different points of view. Hence *Māyā* is also said to be of the nature of Ignorance (*Avidyā* or *Ajñāna*). Lest one should think that *Śaṅkara's* position also fails to maintain pure monism, because two realities—God and *Māyā*—are admitted, *Śaṅkara* points out that *Māyā* as a power of God is no more different from God than the power of burning is from fire. There is then no dualism but pure monism (*advaita*).

But is not even then God really possessed of creative power? *Śaṅkara* replies that so long as one believes in the world-appearance, he looks at God through the world, as the creator of it. But when he realizes that the world is apparent, that nothing is really created, he ceases to think of God as a Creator. To one who is not deceived by the magician's art and sees through his trick, the magician fails to be a magician; he is not credited with any magical power. Similarly, to the few who see nothing but God in the world, God ceases to have *Māyā* or the power of creating appearances.

In view of this *Śaṅkara* finds it necessary to distinguish two different points of view, the ordinary or empirical (*vyāvahārika*) and the transcendental or real (*pāramārthika*). The first is the standpoint of unenlightened persons who regard the world as real; our

life of practice depends on this ; it is rightly called, therefore, the vyāvahārika or practical point of view. From this point of view the world appears as real ; God is thought to be its omnipotent and omniscient creator, sustainer and destroyer. ; Thus God appears as qualified (saguna) by many qualities. God in this aspect is called by Saṅkara Saguna Brahma or Išvara. From this point of view the self also appears as though limited by the body ; it behaves like a finite ego (aham). The second or the real (pāramārthika) standpoint is that of the enlightened who have realized that the world is an appearance and that there is nothing but God. From this point of view, the world being thought unreal, God ceases to be regarded as any real creator, or as possessed of any qualities like omniscience, omnipotence. God is realized as One without any internal distinction, without any quality. God from this transcendental standpoint (pāramārthika-dṛṣṭi) is indeterminate, and characterless ; it is Nirguṇa Brahman. The body also is known to be apparent and there is nothing to distinguish the soul from God.

The attainment of this real standpoint is possible only by the removal of ignorance (avidyā) to which the cosmic illusion is due. - And this can be effected only by the knowledge that is imparted by the Vedānta. One must control the senses and the mind, give up all attachment to objects, realizing their transitory nature, and have an earnest desire for liberation. He should then study the Vedānta under an enlightened teacher, and try to realize its truths by constant reasoning and meditation. When he is thus fit, the teacher would tell him at last : " Thou art Brahman." He would

meditate on this till he has a direct and permanent realization of the truth 'I am Brahman.' This is perfect wisdom or liberation from bondage. Though such a wise or liberated soul still persists in the body and in the world, these no longer fetter him, as he does not regard them as real. He is *in* the world, but not *of* the world. No attachment, no illusion can affect his wisdom. The soul then being free from the illusory ideas that divided it from God, is free from all misery. As God is Bliss, so also is the liberated soul.

CHAPTER II

THE CĀRVĀKA PHILOSOPHY

I. ITS ORIGIN AND SCOPE

Materialism is the name given to the metaphysical doctrine which holds that matter is the only reality. This doctrine tries to explain mind and consciousness as the products of matter. In general outlook materialism represents the tendency that seeks to reduce the higher to the lower or explain the higher phenomena in the light of the lower ones. In this respect it is opposed to spiritual interpretations of the universe.

Though materialism in some form or other has always been present in India, and occasional references are found in the Vedas, the Buddhistic literature, the Epics, as well as in the later philosophical works, we do not find any systematic work on materialism, nor any organized school of followers as the other philosophical schools possess. But almost every work of the other schools states, for refutation, the materialistic views. Our knowledge of Indian materialism is chiefly based on these.

'Cārvāka' is the word that generally stands for 'materialist.' But the original meaning of this word is shrouded in mystery. According to one view, 'Cārvāka' was originally the name of a sage who propounded materialism. The common name 'Cārvāka' is derived from this proper name and means the follower of that

sage, i.e. a materialist. According to another view, 'Cārvāka' was even originally a common descriptive name given to a materialist, either because he preaches the doctrine of 'eat, drink and be merry'¹ (carv—eat, chew), or because his words are pleasant and nice (cāru—nice, vāk—word). Some writers² again regard Brhaspati as the founder of materialism. This view is based on the facts (a) that some Vedic hymns ascribed by tradition to Brhaspati, son of Loka, are marked by a spirit of revolt and free-thinking, (b) that in the Mahābhārata and elsewhere materialistic views are put in the mouth of Brhaspati and (c) that about a dozen sūtras and verses are found quoted or referred to by different authors as the materialistic teachings of Brhaspati. Some even go a little further and say that Brhaspati, the teacher of the gods, propagated the materialistic views among the giants (the enemies of the gods) so that by following these attractive teachings they might come to ruin!

But whoever be the founder of Indian materialism, 'Cārvāka' has become synonymous

A materialist is called Cārvāka or Lokāyatika.

with 'materialist.' The word used for materialism is also lokāyatamata, i.e. the view of common people. A

materialist is accordingly called also lokāyatika.

Though the materialistic ideas are scattered here and there, they may be systematized and conveniently presented under three chief heads, namely, Epistemology, Metaphysics and Ethics.

II. THE CĀRVĀKA EPISTEMOLOGY

The entire philosophy of the Cārvākas may be said to depend logically on their epistemology or the theory of knowledge. The main problems of epistemo-

Perception is the only source of knowledge.

¹ Cf. 'Pira, khāda ca varalocane,' *Śaḍ-darśana-samuccaya*, Lokāyatamatam.

² *Ibid.* and *Sarva-darśana-saṅgraha*.

logy are: How far can we know reality? How does knowledge originate and develop? This last question involves the problem: What are the different sources of knowledge? This problem forms one of the chief topics of Indian epistemology. Knowledge of reality or valid cognition is called *pramā* and the source of such knowledge is called *pramāṇa*. The Cārvāka holds that perception is the only *pramāṇa* or dependable source of knowledge. For establishing this position he criticizes the possibility of other sources of knowledge like inference and testimony which are regarded as valid *pramāṇas* by many philosophers.

1. *Inference is Not Certain*

If inference is to be regarded as a *pramāṇa*, it must yield knowledge about which we can have no doubt and which must be true to reality. But inference cannot fulfil these conditions, because when we infer, for

Inference is an uncertain leap from the known to the unknown.

example, the existence of fire in a mountain from the perception of smoke in it, we take a leap in the dark, from the perceived smoke to

the unperceived fire. A logician, like the Naiyāyika,

For, it depends on a universal relation between the middle and the major term, and

will perhaps point out that such a leap is justified by the previous knowledge of an invariable concomitance between smoke and fire

and that the inference stated more fully would be: All cases of smoke are cases of fire, this (mountain) is a case of smoke, therefore this is a case of fire.

The Cārvāka points out that this contention would be acceptable only if the major premise, stating the

invariable relation between the middle term (smoke) and the major (fire), were beyond doubt. But this invariable relation (vyāpti) can be established only if we have a knowledge of *all* cases of smoke and *all* cases of fire. This, however, is not possible, as we cannot perceive even all the cases of smoke and fire existing now in different parts of the world, to speak nothing of those which existed in the past or will exist in the future. No invariable, universal relation (vyāpti) can, therefore, be established by perception. Neither can it be said to be based on another inference, because it will involve a *petitio principii*, since the validity of that inference again has to be similarly proved. Nor can this vyāpti be based on the testimony (śabda) of reliable persons (who state that all cases of smoke are cases of fire). For, the validity of testimony itself requires to be proved by inference. Besides, if inference always depended on testimony, no one could infer anything by himself.

But it may be asked: Though it is not possible to perceive all individual cases of smoke and fire, is it not possible to perceive the constant class-characters (sāmānya) like 'smokeness' and 'fireness' which must be invariably present in all instances of smoke and fire respectively? If so, then can we not say that we at least perceive a relation between smokeness and fireness and with its help infer the presence of fire, wherever we perceive smoke? The Cārvāka replies that even if we grant the perception of a relation between smokeness and fireness, we cannot know therefrom any invariable relation between all individual cases of smoke and fire. To be able to infer a particular fire, we must know that it is inseparably related to the particular smoke perceived. In fact, it is not possible even to know by perception what 'smokeness' or the class-character universally present in *all* particular instances of

smoke is, because we do not perceive *all* cases of smoke. What is found to be universally present in the *perceived* cases of smoke, may not be present in the *unperceived* ones. The difficulty of passing from particulars to the universal, therefore, remains here as before.

But it may be asked: If we do not believe in any fixed universal law underlying the phenomena of the world, how would we explain the uniformities that experienced objects possess? Why is fire always experienced to be hot and water to be cool? The Cārvāka reply is that it is due to the inherent natures (*svabhāva*) of things that they possess particular characters. No supernatural principle need be supposed to account for the properties of experienced objects of nature. There is neither any guarantee that uniformity perceived in the past would continue in future.

A modern student of inductive logic would be tempted to ask the Cārvāka: "But can we not base our knowledge of the invariable relation between smoke and fire on a *causal relation* between them?" The Cārvāka reply would be that a causal relation, being only a kind of invariable relation, cannot be established by perception due to the same difficulties.

The Cārvāka would further point out that a causal or any other invariable relation cannot be established merely by repeated perception of two things occurring together. For, one must be certain that there is no other unperceived condition (*upādhi*) on which this relation depends. For example, if a man perceives a number of times fire accompanied by smoke and on another occasion he infers the existence of smoke on the perception of fire, he would be liable to error, because he failed to notice

Uniformities of experience are explained by the inherent natures of things, which also may change in future.

Causal relation is not ascertainable.

a condition (upādhi), namely, wetness of fuel, on the presence of which alone fire is attended with smoke. So long as the relation between two phenomena is not proved to be unconditional, it is an uncertain ground for inference. And unconditionality or absence of conditions cannot be established beyond doubt by perception, as some conditions may always remain hidden and escape notice. Inference or testimony cannot be used for proving this unconditionality without a *petitio principii*. Because its validity also is being questioned here.

It is true that in life we very often act unsuspectingly on inference. But that only shows that we act uncritically on the wrong belief that our inference is true. It is a fact that sometimes our inference comes true and leads to successful results. But it is also a fact that sometimes inference leads to error as well. Truth is not then an unfailing character of all inferences; it is only an accident, and a separable one, that we find only in some inferences.

Inference cannot be regarded, therefore, as a *pramāṇa*—a sure source of valid cognition.

2. *Testimony is Not a Safe Source of Knowledge*

But can we not regard the testimony of competent persons as a valid and safe source of knowledge? Do we not very often act on knowledge received from authority? The Cārvāka replies that testimony consists of words (*śabda*). So far as words are heard through our ears, they are perceived. Knowledge of words is, therefore, knowledge through perception and is quite valid. But in so far as these words suggest or mean things not within our perception, and

Some inferences accidentally turn out to be true.

Testimony relating to unperceived objects is not reliable.

aim at giving us knowledge of those unperceived objects, they are not free from error and doubt. Very often we are misled by so-called authority. The authority of the Vedas, for example, is regarded in high esteem by many. But in reality the

Even the Vedas are not reliable.

Vedas are the works of some cunning priests who earned their living by duping the ignorant and the credulous. With false hopes and promises the Vedas persuade men to perform Vedic rites, the only tangible benefit of which goes to the priests who officiate and enjoy the emoluments.

But will not our knowledge be extremely limited and practical life sometimes impossible if we do not accept the words of the experienced and do not depend on expert advice? The Cārvāka reply is that in so far as we depend on any authority, because we think it to be reliable, the knowledge obtained is really based on inference; because our belief is generated by a mental process like this: This authority should be accepted because it is reliable, and all reliable authority should be accepted. Being based on inference, knowledge derived from verbal testimony or authority is as precarious as inference. And as in the case of inference, so here we often act on knowledge derived from authority on the wrong belief that it is reliable. Sometimes this belief accidentally leads to successful results, sometimes it does not. Therefore, authority or testimony cannot be regarded as a safe and valid source of knowledge.

As neither inference nor authority can be proved

to be reliable, perception must be regarded as the only valid source of knowledge (pramāṇa).

III. METAPHYSICS

Metaphysics is the theory of reality. The Cārvāka theory of reality follows from the epistemological conclusion just discussed. If perception is the only reliable source of knowledge, then we can rationally assert only the reality of perceptible objects. God, soul, heaven, life before birth or after death and any unperceived law (like adṛṣṭa) cannot be believed in, because they are all beyond perception. Material objects are the only objects whose existence can be perceived and whose reality can be asserted. The Cārvākas, thus, come to establish materialism or the theory that matter is the only reality.

1. *The World is Made of Four Elements*

Regarding the nature of the material world most other Indian thinkers hold that it is composed of the five kinds of elements (pañca-bhūta), namely, ether (ākāśa), air (vāyu), fire (agni), water (ap) and earth (kṣiti). But the Cārvākas reject ether, because its existence cannot be perceived, but has to be inferred. The material world is, therefore, held to be composed of the four perceptible elements. Not only non-living material objects but also living organisms, like plants and animal bodies, are composed of these four elements, by the combination of which they are produced and to which they are reduced on death.

2. *There is No Soul*

But it may be asked, even if perception is the only source of knowledge, do we not have a kind of perception, called internal, which gives an immediate knowledge of our mental states? And do we not perceive in these, consciousness which is nowhere to be perceived in the external material objects? If so, does it not compel us to believe that there is in us some non-material substance whose quality is consciousness—the substance which is called soul or spirit (ātmā)?

The soul is nothing but the living body, with the quality of consciousness.

The Cārvākas admit that the existence of consciousness is proved by perception. But they deny that consciousness is the quality of any unperceived non-material or spiritual entity. As consciousness is perceived to exist in the perceptible living body composed of the material elements, it must be a quality of this body itself. What people mean by a soul is nothing more than this conscious living body (*caitanya-viśiṣṭa-deha eva ātmā*). The non-material soul is never perceived. On the contrary, we have direct evidence of the identity of the self with the body in our daily experiences and judgments like, 'I am fat,' 'I am lame,' 'I am blind,' If the 'I,' the self, were different from the body, these would be meaningless.

But the objection may be raised: We do not perceive consciousness in any of the four material elements. How can it then come to qualify their product, the body? In reply the Cārvāka points out that qualities not present originally in any of the component factors;

may emerge subsequently when the factors are combined together. For example, betel leaf, lime and nut, none of which is originally red, come to acquire a reddish tinge when chewed together. Or, even the same thing placed under a different condition may develop qualities originally absent. For example, molasses (guda), originally non-intoxicant, becomes intoxicant when allowed to ferment. In a similar way it is possible to think that the material elements combined in a particular way give rise to the conscious living body. Consciousness is an epiphenomenon or bye-product of matter ; there is no evidence of its existence independent of the body.

If the existence of a soul apart from the body is not proved, then there is no possibility of proving its immortality. On the contrary, death of the body means the end of the individual. All questions about previous life, after-life, rebirth, enjoyment of the fruits of actions in heaven or hell, therefore, become meaningless.

3. *There is No God*

God, whose existence cannot be perceived, fares no better than the soul. The material elements produce the world, and the supposition of a creator is unnecessary. The objection may be raised : Can the material elements by themselves give rise to this wonderful world ? We find that even the production of an object like an earthen jar requires, in addition to clay which is

The supposition of God as creator is unnecessary. The world comes into existence by the spontaneous combination of material elements.

its material cause, a potter who is the efficient cause that shapes the material into the desired form. The four elements supply only the material cause of the world. Do we not require an efficient cause, like God, as the shaper

and designer who turns the material elements into this wonderful world? In reply, the Cārvāka states that the material elements themselves have got each its fixed nature (*svabhāva*). It is by the natures and laws inherent in them that they combine together to form this world. There is thus no necessity for God. There is no proof that the objects of the world are the products of any design. They can be explained more reasonably as the fortuitous products of the elements. The Cārvākas, therefore, prefer atheism.

In so far as this Cārvāka theory tries to explain the world only by nature, it is sometimes called naturalism (*svabhāva-vāda*). It is also called mechanism (*yadrucchā-vāda*), because it denies the existence of conscious purpose behind the world and explains it as a mere mechanical or fortuitous combination of elements. The Cārvāka theory on the whole may also be called positivism, because it believes only in positive facts or observable phenomena.

IV. ETHICS

Ethics is the science of morality. It discusses problems like: What is the highest goal or *summum bonum* man can achieve? What should be the end of human conduct? What is the standard of moral judgment? The Cārvākas discuss these ethical problems in conformity with their metaphysical theories.

Some Indian philosophers like the Mīmāṃsakas believe that the highest goal of human life is heaven (*svarga*) which is a state of unalloyed bliss that can be attained hereafter by performing here the Vedic rites. The Cārvāka rejects this view, because it is based on

the unproved existence of a life after death. 'Heaven'

Heaven is a myth
and cannot be the
goal of life.

and 'hell' are the inventions of the priests whose professional interest lies in coaxing, threatening and making people perform the rituals. Enlightened men will always refuse to be duped by them.

Many other philosophers regard liberation as the highest goal of human life. Liberation, again, is conceived as the total destruction of all sufferings. Some

Liberation, as freedom from all pain, is an impossible ideal.

think that it can be attained only after death, when the soul is free from the body; and others believe that it can be attained even in this life. But the Cārvāka holds that none of these views stands to reason. If liberation is freedom of the soul from its bondage to physical existence, it is absurd because there is no soul. But if liberation means the attainment of a state in this life free from all pain, it is also an impossible ideal. Existence in this body is bound up with pleasure as well as pain. We can only try to minimise pain and enjoy as much pleasure as we can. Liberation in the sense of complete cessation of sufferings can only mean death.¹ Those who try to attain in life a state free from pleasures and pains by rigorously suppressing the

Pleasure, though mixed with pain, is the only possible good.

natural appetites, thinking that all pleasures arising out of their gratification are mixed with pain, act like fools. For no wise man would reject the kernel because of its husk, nor give up eating fish because there are bones, nor cease to grow crops because there are

¹ 'Marāṇam eva apavargah,' *Bṛhaspati-sūtra*

animals to destroy them, nor stop cooking his food because beggars might ask for a share. If we remember that our existence is confined to the existence of the body and to this life, we must regard the pleasures arising in the body as the only good things we can obtain. We should not throw away the opportunities of enjoying *this* life, in the futile hope of enjoyment hereafter. 'Rather a pigeon to-day, than a peacock to-morrow.' 'A sure shell (courie) is better than a doubtful golden coin.' 'Who is that fool who would entrust the money in hand to the custody of others?' The goal of human life is, therefore, to attain the maximum amount of pleasures in *this* life, avoiding pain

Pleasure is the ideal as far as possible. A good life is a life of maximum enjoyment. A good action is one which leads to a balance of pleasure and a bad action is one which brings about more pain than pleasure. This Cārvāka ethics may be called, therefore, hedonism or the theory that pleasure is the highest goal.

Some Indian thinkers speak of the four ends of human activity (puruṣārtha), namely, wealth (artha), enjoyment (kāma), virtue (dharma) and liberation (mokṣa). Of these four, the Cārvākas reject the last two. Liberation in the sense of destruction of all sufferings can be obtained only by death and no wise man would willingly work for that end. Virtue and vice are distinctions made by the scriptures, whose

and neither virtue (dharma) nor liberation (mokṣa).

¹ Kāma-sūtra, Chap. 2.

authority cannot be rationally accepted. Therefore, neither liberation nor virtue should be our end. Wealth and enjoyment are the only rational ends that a wise man can toil to achieve. But enjoyment is the ultimate end ; wealth is not an end in itself, it is good only as a means to enjoyment.

Wealth is good only as a means to enjoyment.

Having rejected the authority of the scriptures, the notions of virtue and vice and belief in life after death, the Cārvākas are naturally opposed to the performance of religious ceremonies with the object of either attaining heaven or avoiding hell or propitiating departed souls. They raise cheap laughter at the customary rites. If the food offered during funeral ceremony (śrāddha) for the departed soul can appease his hunger, what is the use of a traveller's taking food with him ? Why should not his people make some offerings in his name at home to satisfy his hunger ? Similarly, food offered on the ground-floor should satisfy a person living upstairs. If the priests really believe, as they say, that animals killed at a sacrifice (yajña) are sure to reach heaven, why do they not rather sacrifice their old parents instead of animals and make heaven sure for them ?

Religion is thus reduced to morality and morality to the search of pleasure. The ethics of the Cārvāka is only the logical outcome of his materialistic metaphysics.

V. CONCLUSION

Like the Epicureans of Greece, the Cārvākas in India have been more hated than understood. 'Cārvāka' in the mind of people at large is a term of reproach. But it is useful for a student of philosophy to remember as well what Indian philosophy owes to the Cārvāka. Scepticism or agnosticism is only an expression of a free mind that refuses to accept traditional wisdom without a thorough criticism. Philosophy, as critical speculation, claims to live chiefly on free thought and the more it can satisfy the sceptic, the sounder it can hope to be. By questioning the soundness of popular notions, the sceptic sets new problems, by the solution of which philosophy becomes richer. Kant, one of the greatest philosophers of the West, recognized his debt to scepticism when he declared: "The scepticism of Hume roused me from my dogmatic slumber." And we may say that the Cārvāka similarly saved Indian philosophy from dogmatism to a great extent. As noted already, every system of Indian thought tried to meet the Cārvāka objections and made the Cārvāka a touchstone of its theories. The value of the Cārvāka philosophy, therefore, lies directly in supplying fresh philosophical problems and indirectly in compelling other thinkers to give up dogmatism, and become critical and cautious in speculation as well as in statement of views.

What has made the Cārvākas most disreputable to people is perhaps their ethics of pleasure. Pursuit of

pleasure is not by itself an object of condemnation ; pleasure, in some form, is recognized as desirable by other philosophers as well. It is condemned only when the nature of pleasure is coarse and the pleasure is wanted only for one's own self. It is true that some Cārvākas advocate a life of gross sensual pleasures. But a distinction found sometimes between the cunning (dhūrta) and cultured (suśikṣita) Cārvākas makes it likely that the Cārvākas were not all of the same gross, uncultured type. There is evidence that the materialists devoted themselves also to the pursuit of more refined pleasures by cultivating, for example, the fine arts, the number of which is as large as sixty-four (catuṣ-ṣaṣṭi-kalāḥ), according to Vātsyāyana, a recognized hedonist and author of the famous *Kāma-sūtra*. All materialists were not egoistic hedonists. Egoistic hedonism in its gross form is not compatible with social discipline. Life in society is impossible if man does not sacrifice a part of his pleasures for others. Some Cārvākas, we are told, regard the king as God. This implies their great faith in the necessity of society and its head. This view is further strengthened when we find that political philosophy and economy (dandānīti and vārttā) came to be incorporated at some stage in the philosophy of the Lokāyatikas. It would appear from these facts that there were among the materialists of ancient India as cultured thinkers as we find among the positivists of modern Europe or the followers of Democritus in ancient Greece.

The best positive evidence of refined hedonism is found in the ethical philosophy propounded by Vātsyāyana in the second chapter of the *Kāma-sūtra*. It is here that we find a great hedonist himself stating and defending his own views.¹ Though Vātsyāyana believes in God and in life after death and, therefore, is not a materialist in the ordinary sense, yet he may be regarded as one, according to a wider sense of the term, namely, one who tries to explain 'higher phenomena by lower ones.'² Vātsyāyana admits three desirable ends of human life (puruṣārtha),

¹ The date of Vātsyāyana, according to some, is near about the beginning of the Christian era, and Vātsyāyana tells us that he is only summarising the views of a long line of previous writers, about a dozen in number, whose works are not available now. This shows the great antiquity of his line of thought.

² Vide James, *Pragmatism*, p. 93.

namely, dharma, artha and kâma (virtue, wealth and enjoyment), which should be cultivated harmoniously.¹ His materialist tendency consists in holding that dharma and artha are to be treated only as means to enjoyment, which is, therefore, the supreme end. The element of refinement in his hedonism consists in his emphasis on self-control (brahmacarya) and spiritual discipline (dharma), as well as urbanity (nāgarika-vṛtti), without which human enjoyment of pleasure is reduced to the level of beastly enjoyment. He shows that all physical enjoyment (kâma) is ultimately reducible to the gratification of the five senses. He further asserts that the satisfaction of the senses is necessary for the very existence of the body (śarīrasthiti), like the satisfaction of hunger.² But he also maintains that the senses must be educated, disciplined and cultured, through a training in the sixty-four fine arts. This training should be given only after a person has devoted the earlier part of his life to absolute self-continnence and study of the Vedas and the other subsidiary branches of learning. He points out that without culture human enjoyment would be indistinguishable from beastly pleasures. To the impatient hedonist who would not forgo present comfort and would not undergo any toil for future enjoyment in this life, Vātsyāyana points out that such attitude would be suicidal. For, this would prevent a man even from the toil of cultivation and sowing seeds in the hope of the future enjoyment of a crop. In favour of regulation of the desire for enjoyment, he points out with historical examples that inordinate desire, inconsistent with the principles of dharma and wealth, leads to ruin and annihilates the chances of all enjoyment. In support of scientific study of the conditions and means of enjoyment, he urges, like a modern scientific man, that some science is at the root of all successful practice; and that though all persons may not study science, they are benefited by the ideas which unconsciously and indirectly filter down to the masses, among which the few scientists live. We find, then, that Vātsyāyana represents Indian hedonism at its best. It is perhaps to thinkers of this

¹ 'Parasparasya anupagbūtakatū trivargaṁ seveta', *Kāma-sūtr.*, Chap. 2.

² Yaśodhara, the commentator on *Kāma-sūtr.*, explaining this, mentions that non-satisfaction of the senses might lead to diseases like insanity (unmāda).

kind that the name 'cultured hedonist' (sūśikṣita-cārvāka) was applied.

Finally, it may be noted that the contribution of Cārvāka epistemology is not insignificant. The criticism of inference put in the mouth of the Cārvāka by his opponents reminds us of similar criticism made in modern times against the soundness of deductive logic. The Cārvāka view that no inference can yield certain knowledge is the view of many contemporary Western thinkers like the pragmatists and logical positivists.

CHAPTER III

THE JAINA PHILOSOPHY

I. INTRODUCTION

The Jainas recount the names of twenty-four teachers (tirthaṅkaras) through whom their faith is believed to have come down from unknown antiquity. The first of these teachers was Ṛṣabhadeva. The last was Vardhamāna, also styled Mahāvīra ('the great hero'). He is said to have lived in the sixth century B.C. during the time of Gotama Buddha. The teacher who immediately preceded Vardhamāna was Pārśvanātha, who lived in the ninth century B.C. The other twenty-two teachers belong to pre-historic ages.¹ The word 'Jina' etymologically means a conqueror. It is the common name applied to the twenty-four teachers, because they have conquered all passions (rāga and dveṣa) and have attained liberation.

The Jainas do not believe in God. They adore the Tirthaṅkaras or the founders of the faith. These are the liberated souls who were once in bondage, but became, through their own efforts, free, perfect, omniscient, omnipotent and all-blissful. The Jainas believe that every spirit (jīva), that is in bondage now, can follow the example set by

¹ For a complete account, *vide* The *Kalpa-sūtra* of Bhadrabāhu (Jacobi, *Jaina Sūtras*, Part I) and Mrs. Stevenson's *The Heart of Jainism*, Chap. IV.

the Jinas and attain, like them, perfect knowledge, power and joy. This is the great element of optimism that inspires every true Jaina with absolute self-confidence. The possibility of the realization of an inherent potentiality, through personal effort, is for him not a mere speculation but a fact proved repeatedly by the life of every liberated saint.

In course of time the followers of Jainism were divided into two sects well-known now as the Svetāmbaras and the Digambaras. The difference between them lies, however, not so much in the basic philosophical doctrines as in some minor details of faith and practice. The teachings of the Jinas are accepted by both the sects. But the Digambaras are more rigorous and puritanic, while the Svetāmbaras are more accommodating to the common frailties of men. The Digambaras hold, for example, that ascetics should give up all possessions, even clothes, whereas the Svetāmbaras hold that they should put on white clothes.¹ Again, according to the Digambaras, a saint who has obtained perfect knowledge needs no food, women cannot obtain liberation (without being born once more as men). The Svetāmbaras do not accept these views.

Jainism possesses a vast literature, mostly in Prākṛta. The canonical or authoritative works accepted by all sects are said to contain the teachings of the last Tīrthāṅkara, Mahāvīra. They are too many to be mentioned

¹ 'Digambara' literally means nude and 'Svetāmbara' white-robed.

here. Much of the early literature has been lost. When Jainism had to defend itself against the criticism of other schools, it adopted, for this purpose, the technical philosophical terminology of Sanskrit and thus developed its literature in Sanskrit as well.

The philosophical outlook of Jainism is common-sense realism and pluralism. The objects perceived by us are real, and they are many. The world consists of two kinds of reality, living and non-living.

The philosophical outlook of Jainism.

Every living being has a spirit or a soul (jīva), however imperfect its body may be. Avoidance of all injury to life (ahimsā), plays, therefore, an important rôle in Jaina ethics. Along with this respect for life there is in Jainism another great element, namely, respect for the opinion of others. This last attitude is justified by a metaphysical theory of reality as many-faced (anekāntavāda) and a consequent logical doctrine (syādvāda) that every judgment is subject to some condition and limitation, and various judgments about the same reality may, therefore, be true, each in its own sense, subject to its own condition.

The philosophy of the Jainas may be conveniently discussed under three topics, viz. Epistemology (or theory of knowledge including Logic), Metaphysics, and Ethics and Religion.

II. THE JAINA THEORY OF KNOWLEDGE

1. *The Nature and Kinds of Knowledge*

Consciousness is the inseparable *essence* of every soul, according to the Jainas ; it is not, as the Cārvākas hold, a mere accidental property, arising only

Consciousness is the essence of the soul.

under some conditions. Moreover, consciousness is conceived like the sun's light, capable of manifesting

It manifests itself
and other objects.

itself and every thing else unless some obstruction prevents it from reaching its object.¹ Had there been no obstacles, the soul would have been omniscient. Omniscience is a potentiality inherent in every soul. As it is, however, we find that ordinary souls are all more or less ignorant; their knowledge is limited. The Jainas hold that this limitation is due to the obstacles created by different karmas which obstruct in different degrees the natural consciousness of the soul and thus deprive it of its omniscience. The body, the senses and the mind (*manas*) are all constituted by karmas and the soul's power is limited by them.

Like other thinkers, the Jainas admit the twofold classification of knowledge into immediate and mediate (*aparokṣa* and *parokṣa*). But they point out

Immediate and mediate
knowledge.

that what is ordinarily regarded as immediate knowledge is only *relatively* immediate. Perception of external or internal objects through the senses (*indriya*) or mind (*manas*) is immediate as compared with inference. Still such knowledge cannot be said to be absolutely immediate, because even here the soul knows

through the *medium* of something else, namely, the senses or *manas*. In addition to such ordinary or empirical (*vyāvahārika*) immediate knowledge, there is also a really or absolutely (*pāramārthika*) immediate knowledge, which

Two kinds of immediate
knowledge, ordinary
immediate and really
immediate know-
ledge.

¹ 'Jñānaṁ *eva-para-bhāsi*.'

a soul attains, by removing its karma obstacles. In such knowledge the soul's consciousness becomes immediately related to objects, without the medium of senses, etc., simply by the removal of the karmas that prevented it from reaching those objects.¹ Three different kinds of such *really* immediate knowledge are distinguished. When a person has partially destroyed and allayed the influences of karmas, he acquires the power of knowing objects which have forms, but are too distant or minute or obscure to

Three kinds of really immediate knowledge—*avadhi*, *manahpariyāya* and *kevala*.

be observed by the senses or *manas*. Such immediate knowledge by the unsided soul is, however, *limited* as its objects are limited and, therefore, it is called *avadhi-jñāna* (limited knowledge). Again, when a person has overcome hatred, jealousy, etc. (which create obstacles that stand in the way of knowing other minds), he can have direct access to the present and past thoughts of others. This knowledge is called *manah-pariyāya* (entering a mind). But when *all* karmas that obstruct knowledge are completely removed from the soul, there arises in it absolute knowledge or omniscience. This is called *kevala-jñāna*. Only the liberated souls have such knowledge.²

¹ Early Jaina writers like Umāsvāmi confine 'aparokṣa' only to the soul's immediate knowledge without any medium. Later writers like Hemachandra extend it to ordinary sense-perception as well, as most other Indian logicians do. To justify the narrower sense 'akṣa' is interpreted as 'jīva' and not 'indriya' as ordinarily explained (*vide* Guṇaratna's Com. on *Śaḍ-darśana*, verse 55).

² *Vide* *Tattvārthadhigama-sūtra*, Chap. I, sūtras 9, 12, 21-29.

These are, then, the three kinds of extraordinary or extra-sensory perceptions which are immediate *par excellence*. But in addition to these, there are the two kinds of ordinary knowledge possessed by an average person. These are called *mati* and *śruta*. There are differences of opinion among Jaina writers regarding the exact meanings of these terms. But ordinarily, *mati* is taken to mean any kind of knowledge which we can obtain through the senses or through *manas*.¹ Thus understood, *mati* includes ordinary immediate knowledge (or internal and external perception), memory, recognition and inference.² *Śruta* is knowledge obtained from authority.

The Jainas give an account of the process by which ordinary perception takes place and is retained.³ At first there is only a distinct sensation, say of a sound. It is not yet known what it means. This primary state of consciousness is called *avagraha* (i.e. grasping the object). Then arises the query: "What is this sound?" This questioning state of the mind is called *ihā* (i.e. query). Then comes a definite judgment like "This is the sound of a car." This is called *āvāya* (removal of doubt). Then what is ascertained is retained in the mind. This retention is called *dhāraṇā* (i.e. holding in the mind).

Śruta, the second kind of ordinary knowledge, is mostly interpreted as knowledge obtained from what is heard from others.⁴ This includes all kinds of knowledge derived from spoken or written authority. As the understanding of any authority is dependent on the perception of sounds or written letters, *śruta* is said to be preceded by *mati*.

It is pointed out, further, that these two kinds of ordinary knowledge (namely, *mati* and *śruta*), as well as the lowest kind of immediate extraordinary knowledge (namely, *avadhi*), are not absolutely free from chances of

¹ *Ibid.*, 1. 14. ² *Ibid.*, 1. 13. ³ *Ibid.*, 1. 15. ⁴ *Ibid.*, 1. 20.

error. But the two higher kinds of immediate extra-sensory knowledge (*manahparyāya* and *kevala*) are never liable to any error.

For ordinary purposes, the Jainas accept the general view that there are three *pramāṇas*, namely, perception, inference and testimony (i.e. authority).¹

2. *The Cārvāka View Criticized*

In accepting non-perceptual sources of knowledge like inference and testimony, the Jaina writers feel it necessary to justify their view by refuting the Cārvāka theory that perception is the only source of valid knowledge.² They ask: If a Cārvāka were called

upon to show why even per-

Inference is not invalid. Even the Cārvāka theory presupposes inference.

ception should not be rejected as an invalid source of knowledge,

what would he say? He would

either remain silent and thus confess that he has no reason to support his view, or hold that perception is valid because it is not misleading. If he adopts the first course, then his view is a mere *ipse dixit*, an opinion unsupported by reason, and, therefore, not acceptable. If he adopts the second alternative, then he supports his view by a reason, therefore, he is himself taking the help of inference. Besides, if the Cārvāka admits that perception is valid because it is uncontradicted and not misleading, for similar reasons

¹ Vide *Nyāyavārtānī* (p. 4, S. C. Vidyābhūṣaṇa's ed.): 'pramāṇāṇi pratyakṣānumāna-śabdāni.'

² *Prameya-kaṃala-mārtanda*, Chap. 2; *Syādośa-mañjarī*, verse 20, and Hemacandra's Com. thereon.

inference and testimony also should be accepted. If the Cārvāka says to this, that inference and testimony are sometimes misleading, then it is possible to point out that even perception is sometimes misleading. So the only reasonable conclusion is that any source of knowledge, be it perception or inference or testimony, should be regarded as valid in so far as it yields a knowledge that does not prove misleading. The criterion of validity should be the harmony (*sainvāda*) of knowledge with the practical consequences to which it leads.

Moreover, when the Cārvāka denies the existence of non-perceptible objects like life-after-death, he goes beyond perception and infers the non-existence of the objects from the fact of their non-perception. Even when the Cārvāka says about perception in general that it is valid, he goes beyond the perceived cases of perception found to be valid in the past and infers, from general similarity, something about the future unperceived cases of perception as well. Similarly, when a Cārvāka argues with his critics, he infers their thoughts from their expressions ; for, otherwise the Cārvāka could not take part in any discussion. Hence the Cārvāka view that perception is the only valid source of knowledge, is not correct.

3. *The Jaina Theory of Judgment*

(i) *Syādvāda or the theory that Every Judgment is Relative*

The Jainas point out that the different kinds of
 Every judgment expresses one aspect of reality and is therefore relative and subject to some condition. immediate and mediate knowledge that we possess about objects show that every object has innumerable

characters.¹ An omniscient being can obtain (through kevala-jñāna) an immediate knowledge of an object in all its innumerable aspects. But imperfect beings look at objects from one particular point of view at a time and have consequently the knowledge of only one aspect or character of the thing. Such partial knowledge about some one of the innumerable aspects of an object is called by the Jaina writers 'naya.'² Judgment (parāmarśa) based on such partial knowledge is also called a 'naya.'³ Every judgment that we pass in daily life about any object is, therefore, true only in reference to the standpoint occupied and the aspect of the object considered. It is because we forget this limitation and regard our judgments as unconditionally true, that we come to quarrel and disagree very often in life. The story of the blind men who formed their ideas of an elephant by touching its legs, ears, tail and trunk respectively and thus came to quarrel about the real shape of the animal, illustrates this truth. They quarrelled because each thought that his knowledge was the only true and complete knowledge and should be accepted unconditionally. The quarrel was over as soon as each of them realized that his knowledge was only of one of the many parts of the animal.

¹ Vide *Śaṅk-darśana-samuccaya*, 55 : "ananta-dharmakeśaṁ vastu etc." and Guṇaratna's Com.

² Vide *Nyāyavārtā*, verse 29 : "Ekadeśa-viśiṣṭo'rtho nayasya viśayo mataḥ."

³ "nayati prāpayati samvedanam ārohayatiṣi nayaḥ premāpṛ-
pravṛtteruttarakālabhāvi parāmarśaḥ" *Nyāyavārtā-cis.*, 29.

The different systems of philosophy which give different accounts of the universe similarly occupy different points of view and discover the different aspects of the many-sided universe.

Different systems of philosophy represent different partial aspects of reality.

They quarrel because they do not bear in mind that each account is true only from its own standpoint, and is subject to certain conditions. They fail to realize, therefore, that the different views may be true like the different descriptions of the elephant.

In view of these facts, the Jainas insist that every judgment (naya) should be qualified by some word like 'somehow' (syāt, i.e. in some respect), so that the limitation of this judgment and the possibility of other alternative

Every judgment should be qualified by some word like 'somehow' (syāt), expressing conditionality.

judgments from other points of view may be always clearly borne in mind. For example, instead of a judgment like "The elephant is like a pillar," it should be said, to remove the chance of confusion, "Somehow (i.e. in respect of its legs), the elephant is like a pillar." Similarly, on perceiving a black earthen jug existing in a room at a particular time, we should not assert unconditionally, "The jug exists," but should rather say, "Somehow, the jug exists," which would remind us that the judgment is true only with regard to the many conditions of space, time, quality, etc., under which the jug exists. The qualified judgment "Somehow, the jug exists" (syād ghaṭaḥ asti) would prevent the possibility of the misapprehension that the pot exists at all times or in every place, or that a pot of any other colour, shape, etc., exists. The

unqualified judgment, "The jug exists," leaves the possibility of such misapprehension.

This theory of the Jainas has come to be known as *syādvāda*. It is the view that every ordinary judgment (passed by imperfect minds like ours) holds good only of the particular aspect of the object judged and of the point of view from which the judgment is passed.

This view is called *syādvāda*.

This Jain view is quite in keeping with the view accepted by Western logicians generally, namely, that every judgment is passed in a particular universe of discourse or context and must be understood only in reference thereto. The universe of discourse is constituted by different factors like space, time, degree, quality, etc., which are left unmentioned partly because they are obvious and partly because they are too many to be stated exhaustively. Now, if these conditions cannot be exhaustively enumerated, as some modern logicians like Schiller also admit, it is good for the sake of precision to qualify the judgment explicitly by a word like 'somehow' (*syāt*).

The principle underlying '*syādvāda*' makes Jain thinkers catholic in their outlook. They entertain and accept the views of other philosophers as different possible versions of the universe from different points of view. The only thing that the Jainas dislike in other thinkers is their dogmatic claim that they alone are in the right. This claim amounts to the fallacy of exclusive predication (*ekānta-vāda*). Against such a fallacy of philosophical speculation a protest has been raised recently in America by the Neo-realists who have called it the fallacy of exclusive particularity.¹ But no Western or Eastern philosopher has so earnestly tried to avoid this error in practice as the Jainas have done.

This view makes Jain philosophy catholic and tolerant.

¹ *The New Realism*, pp. 14-15.

(ii) Saptabhaṅginaya or the Seven Forms of Judgment

Ordinarily, logic distinguishes two kinds of judgment, affirmative and negative. The seven forms of conditional predication: The Jainas distinguish seven kinds of judgment including these two.

Any object may be described affirmatively by a judgment which predicates of it any of the characters it possesses, or it may be described negatively by a judgment which denies of it characters belonging to other objects but absent in this.¹ These two are the affirmative and negative judgments ordinarily recognized; but the Jainas qualify each with 'somehow' (syāt) to emphasize its conditional or relative character. Affirmative judgments about a jug, for example, would be like 'somehow the jug is in the room' (i.e. in the room at a particular place and at a particular time, and as a jug of a particular description); 'somehow the jug is red' (i.e. not always red but only during a particular time or under particular circumstances and the red is of a specific shade, etc.). The general form of all affirmative judgments can

(1) 'Somehow S is P' then be symbolically represented as 'somehow S is P' (syāt asti).

Again, negative judgments about an object would be like 'somehow the jar is not outside the room' (meaning that the jar of that particular kind, at that particular time, etc., is not outside); 'somehow the jar is not

¹ Vide Guṇaratna's Com, op. cit. (pp. 219-20, Asiatic Soc. ed.): "Iha dvidhā sambandho'stītvena nāstītvena ca. Tatra svaparyāyairastītvena sambandhaḥ,.....paraparyāyairastītvena nāstītvena."

black' (i.e. not black at that particular space and time and under these conditions, etc.). We find then that the general form of all negative judgments is 'somehow S is not P' (syāt nāsti).

When, however, we have to describe the complex fact that the jar is sometimes red and sometimes not, we must have a compound judgment like 'somehow the jar is and also is not red.' The general form of this judgment would, therefore, be 'somehow S is and also is not P' (syāt asti ca nāsti ca). This is the third form of judgment recognized by Jaina logic. This form is obtained by combining *successively* the points of view of the first two judgments into one composite point of view. The necessity of such compound judgment lies in the need of a comprehensive view of the positive and the negative character of an object.

A jar is black when raw, and red when it is baked.

But if we are asked, what is the real colour of the jar always or under all conditions, the only honest reply would be that the jar cannot be described then, i.e. under the conditions of the question. Under such circumstances when we are forced to predicate simultaneously, of any object, characters which are incompatible, being contrary or contradictory, our judgment, according to the Jainas, would be of the general form, 'somehow S is indescribable' (syāt avaktavyam). This is the fourth kind of judgment recognized by Jaina logic.

Recognition of this third form of judgment is of great philosophical value. It points out, first, that though an object can be described from different points in different aspects separately or successively, it cannot be described at all if no such distinction of standpoint and aspect is made. An object in general is an indescribable entity. Secondly, this also points out that philosophical wisdom does not always consist in the ability to answer a question by a straight affirmative or negative, but also in realizing that some questions, by their very nature, are unanswerable. Thirdly, the recognition of this form of judgment shows that the Jaina logic does not violate the principle of contradiction. On the contrary, it shows that obedience to this law makes the Jaina confess that incompatible characters can not be simultaneously predicated of any subject.

The other three, of the seven forms of judgment,

(5) 'Somehow S is P and ? is also indescribable' (syāt asti ca, avaktavyam ca).

are obtained by combining successively each of the first three standpoints with the fourth. Thus by combining the first and the

fourth *successively*, we get the fifth form of judgment, 'somehow S is P and is also indescribable' (syāt asti ca avaktavyam ca). When we consider together, from a comprehensive point of view, the fact that a jug is sometimes red, but also that without reference to any particular time or state it cannot be described as having any predicable character, our judgment is of the form, 'The jug is somehow red, but is also

(6) 'Somehow S is not P and is also indescribable' (syāt nāsti ca, avaktavyam ca).

somehow indescribable.' Similarly, combining again the second and the fourth standpoint *successively*,

we have the sixth judgment of the general form, 'some-

(7) 'Somehow S is P, also is not P and is indescribable too' (syāt asti ca, nāsti ca, avaktavyam ca).

how S is not P and is also indescribable' (syāt nāsti ca avaktavyam ca). Lastly, combining *successively* the third with the

the fourth point of view, we get the seventh form of judgment, 'Somehow S is P, also is not P, and is indescribable too,' (syāt asti ca, nāsti ca, avaktavyam ca).

If we combine *simultaneously* any of the first three points of view with the fourth, instead of doing so successively, we shall have in each case the simultaneous predication of incompatible characters (like 'is,' and 'indescribable,' or 'is not' and 'indescribable,' or 'is,' 'is not' and 'is indescribable'), which is absurd. Hence in each case the judgment would be the same in form as in the fourth case, namely, 'Somehow S is indescribable' (syāt avaktavyam). Therefore, though there are innumerable aspects of every thing, the forms of judgment would be only seven, neither more nor less.

To sum up, Jaina logic recognizes the following seven kinds of conditional judgment (saptabhaṅgī-naya):

- (1) Somehow, S is P (syāt asti).
- (2) Somehow, S is not P (syāt nāsti).
- (3) Somehow, S is P, and is also not P (syāt asti ca nāsti ca).
- (4) Somehow, S is indescribable (syāt avaktavyam).
- (5) Somehow, S is P, and is also indescribable (syāt asti ca avaktavyam ca).
- (6) Somehow, S is not P, and is also indescribable (syāt nāsti ca avaktavyam ca).
- (7) Somehow, S is P, and is also not P, and also indescribable (syāt asti ca nāsti ca avaktavyam ca).

The Jaina doctrine of syādvāda is sometimes compared with the pragmatism of some Western thinkers. It is true that a pragmatic logician, like Schiller, also recognizes the truth that no judgment is true or false without particular reference to its context and

Syādvāda is realistic and, therefore, not pragmatic.

purpose. Even a so-called self-evident judgment, like 'A square is not a circle' or 'Two and two are four,' is true only in a specific sense, according to Schiller. This is a striking point of resemblance. But there is a very great difference also which should not be forgotten. The Jainas are *realists*, but the pragmatists have a distinct *idealistic* bias. According to the Jainas, the different judgments about an object are not simply different subjective ideas of the object, but they correspond to the different *real* aspects of the object. The Jainas would accept, therefore, the correspondence view of truth which is rejected by all thoroughgoing pragmatists. It is true that they admit like the pragmatists that the truth of a judgment about reality may be ascertained by the harmony (*saṁvāda*) of the judgment with the practical results to which it leads. But this harmony or agreement of knowledge with practice is not to the Jaina, as it is to the pragmatist, the *essence* of truth. Truth does not consist in, but only possesses the *property* of, being practically satisfactory.

The Jaina *syādvāda* is sometimes compared with the Western theory of relativity. There

It is a kind of relativism, but is realistic and not idealistic.

are two kinds of relativity, idealistic (as of Protagoras, Berkeley, Schiller), and realistic (as of Whitehead or

Boodin). And if the Jaina is to be called a relativist, he must be understood to be of the realistic type. Our judgments about things are relative—but relative to or dependent upon not simply the mood of the judging mind, but upon the relational characters of the many-sided reality itself.

Another misunderstanding often found is the interpretation of the Jaina word 'syāt'

It is not scepticism.

as 'may be.' This would impart a

sceptical or agnostic form to the Jaina theory, and make it look like the view of the Greek sceptic Pyrrho who also recommended the qualification of every judgment with a phrase like 'may be.' But it should be noted that the Jaina is not a sceptic. It is not the uncertainty of a judgment, but its conditional or relative character, that is expressed by the addition of the qualifying particle 'syāt.' Subject to the conditions or the universe of discourse under which any judgment is made, the judgment is valid

beyond all doubt. There is, therefore, no room for scepticism.

III. THE JAINA METAPHYSICS

The Jainas hold that every object known by us has innumerable characters (ananta-dharmakam vastu). Let us try to understand a little more clearly the implication of this view.

Every object is found to possess innumerable characters, positive and negative.

Every object is what it is because of its positive and negative characters. The positive characters which determine, for example, an object like a man, are his size, colour, shape, weight, constitution, heredity, family, race, nationality, education, employment, place of birth, date of birth, habitation, age, etc., and the numberless relations he bears to the uncountable other objects of the world. The negative characters which determine the man consist of what he is not. To know him fully, we should know how he is distinguished from everything else; we should know, for example, that he is not a European nor a Chinese, nor a Negro, etc., that he is not a Christian, nor a Mohammedan nor a Zoroastrian, etc., not dishonest, not foolish, not selfish, etc. As the negative characters of the man consist in his distinctions from all other objects in the universe, the number of these would, therefore, be far greater than that of the positive characters.¹

¹ "stokāḥ avaparyāyāḥ, paraparyāyāsto vyāvṛttirūpā anantā, anantebhyo dravyebhyo vyāvṛttitvāt," *Goparatna* on *Śaḍ.*, verse 55.

If we consider, then, an object in the light of its own positive characters and also in the light of the characters of all other objects which are absent in it, the object would no longer appear to be a simple thing having only a limited number of qualities, as we ordinarily take it to be. The object, on the contrary, turns out to be one possessed of unlimited characters. But when, moreover, the element of time is taken into consideration, and it is remembered that the object takes on new characters with the change of time, the object is found really to possess infinite characters (*anantadharma*).

Moreover, it acquires new characters with changes in time.

Hence an object has infinite characters.

Jaina writers, therefore, remark that he who knows one object fully, knows every thing. Only an omniscient person (*kevali*) can have such complete knowledge of an object. For practical purposes (*vyavahāra*) a partial knowledge of what an object is and is not, is, of course, quite sufficient. But this should not make us think, as we do, that a finite object is really possessed of limited characters. Nor should we think that our ordinary knowledge about it is complete and perfect.

Only the omniscient can, therefore, know an object fully.

1. *The Jaina Conception of Substance*

We have just seen that objects have many characters. As in common conversation so also in philosophy a distinction is made between the characters (*dharma*) and that which possesses the characters (*dharmī*). The

A substance is possessed of some unchanging essential characters (*guṇas*) and changing modes (*pariāyas*).

latter is generally called substance (dravya). Jainas accept this common philosophical view of substance. But they point out that there are two kinds of characters found in every substance, essential and accidental. The essential characters of a substance remain in the substance as long as the substance remains. Without these the substance will cease to be what it is. Consciousness, for example, is an essential character of the soul. Again, the accidental characters of a substance come and go ; they succeed one another. Desires, volitions, pleasure and pain are such accidental characters possessed by the soul-substance. It is through such characters that a substance undergoes change or modification. They may also be called, therefore, modes. The Jainas call an essential unchanging character *guṇa*, and an accidental, changing character *paryāya* or *paryaya*. A substance is defined, therefore, as that which possesses qualities (*guṇas*), as well as modes (*paryāyas*).¹

The world is composed of substances of different kinds. In so far as the essential characters of the ultimate substances are abiding, the world is permanent, and in so far as the accidental characters undergo modification, the world also changes. The Jainas, therefore, hold that those philosophers like the Bauddhas, who say that there is nothing really permanent in the universe, and that everything changes from moment to moment (*kṣāṇika-vāda*), are one-sided and dogmatic. Equally mistaken also are philosophers like the monistic Vedāntins,

Change and permanence are, therefore, both real.

¹ *Gūṇa-paryāyavad dravyam, Tat. sūtr., 5.38.*

who declare that change is unreal and that Reality is absolutely unchanging (nitya-vāda).¹ Each of them looks at one side (ekānta) of reality only and thus commits the fallacy of exclusive predication. Change and permanence are both real. It should not be thought contradictory to say that a particular substance (or the universe as a whole) is both subject to change and free from it. Change is true of the substance in one respect (syāt), whereas permanence is true in another respect (syāt). The contradiction vanishes when we remember that each predication is relative and not absolute, as taught by syādvāda.

A substance is real (sat). Reality consists of three factors: permanence, origination and decay. In substance there is its unchanging essence and, therefore, it is permanent; there are again the origin and decay of its changing modes (paryāya). Hence all the three elements that characterize reality are there in a substance.

By accepting this criterion of reality the Jainas reject the Bauddha view that reality consists in causal efficiency, i.e. that an object is real if it is capable of causing any effect. The Bauddha criterion is faulty, because, according to it, even an illusory snake must be called real as it can cause effects like fear, flight, etc. From this faulty criterion of reality the Bauddhas deduce the theory of the momentariness of things, which, therefore, turns out to be fallacious. Against the one-sided

There are the three factors present in reality, viz. permanence, origination and decay.

Causal efficiency cannot be a mark of reality, as Bauddhas think.

The Bauddha theory of momentariness is also untenable.

theory of momentariness the Jainas also adduce the following arguments : ¹

(1) If every thing be momentary, the soul also would be so, and then we could not explain memory, recognition, the immediate feeling of personal identity, etc. (2) Liberation would then be meaningless, because there would be no permanent soul to be liberated. (3) No moral life would be possible then, because a momentary person could not attempt to attain any end. The work of the person who would begin an effort would bring about a fruit that would be enjoyed by the person succeeding him. (4) Consequently there would be no moral law ; the consequences of one's own action would be lost to him (*kṛtaprapāsa*) and the consequences of another man's action would befall him (*akṛtābhyupagama*). (5) Mere momentary states would not even constitute any individual series, because without something permanent running through the changing modes, the different changing states cannot be held together to form a continuous individual. (6) Neither perception nor inference reveals the existence of any thing in the world in which there is only change and no element of continuity.

2. *Classification of Substances*

The broadest classification of substances, according to the Jaina, is into the extended and the non-extended. There is only one substance, namely, time (*kāla*), which is devoid of extension. All other substances possess extension. They are called by the

Substances, extended
and non-extended.

¹ *Sarva-darśana-saṅgraha*, Ch. on Jaina, and Guṇaratna's Com. on *Śaḍ.*, 52.

general name *astikāya*, because every substance of this kind exists (*asti*) like a body (*kāya*), occupying space.¹

The space-occupying substances (*astikāyas*) are subdivided into two kinds, namely, the living and the non-living, the living (*jīva*) and the non-living (*ajīva*). Living substances (*jīvas*) are identical with souls or spirits. The souls again can be classified into those that are emancipated or perfect (*mukta*) and those that are in bondage (*baddha*). The souls in bondage are again of two kinds, those that are capable of movement (*trasa*) and those that are immobile (*sthāvara*). The immobile living substances have the most imperfect kinds of bodies. They live in the five kinds of bodies made of earth, water, fire, air or plants respectively.² They have only the sense of touch ; they possess, therefore, only tactual consciousness. The mobile living substances have bodies of different degrees of perfection and variously possess two, three, four or five senses. Souls or living substances like shells and snails have two senses, namely, those of touch and taste ; those like ants and leeches have three senses, namely, those of touch, taste and smell ; those like gnats, mosquitoes and bees

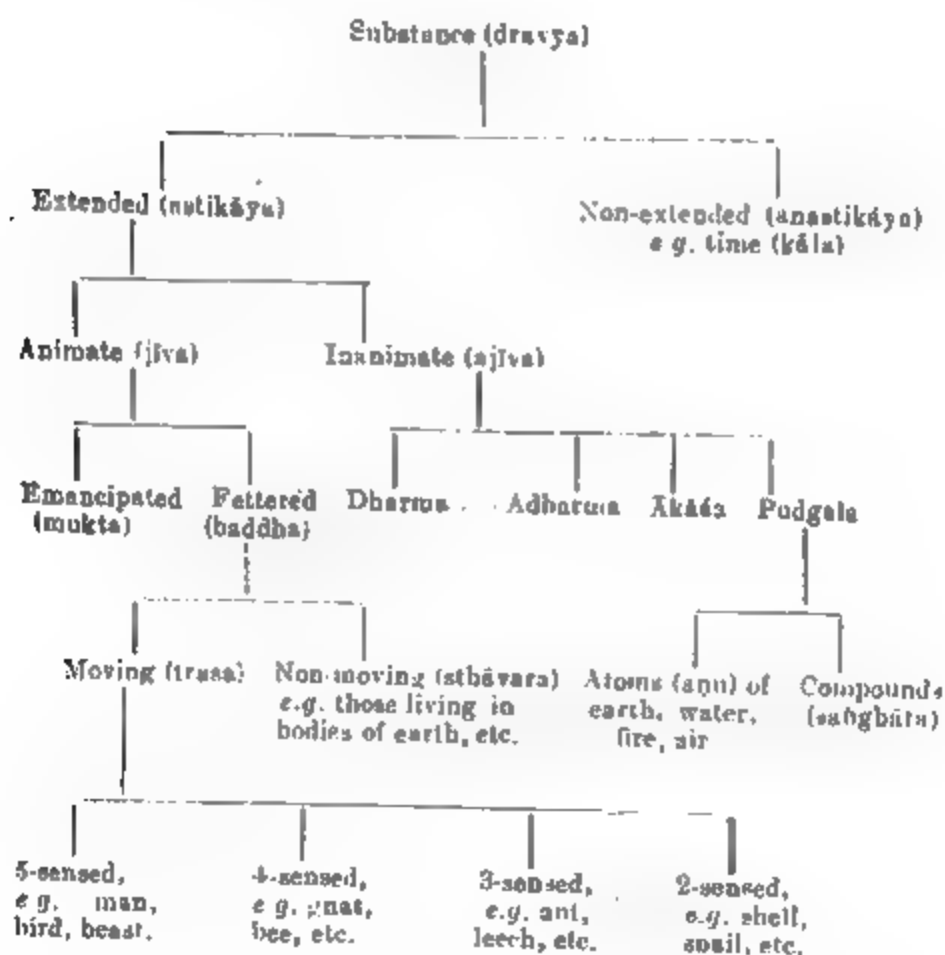

¹ Vide *Dravya-saṅgraha*, 24. According to Guṇaratna, however, '*astikāya*' means a collection of indivisible parts of space.

² *Syādvāda*., 29, and also Guṇaratna's Com. on *Śeṣ*., 49.

possess four senses, namely, those of touch, taste, smell and sight. Higher animals like beasts, birds and men have five senses, namely, those of touch, taste, smell, sight and hearing.

Non-living substances, occupying space, are dharma, adharma, ākāśa and pudgala.

The following table will clearly show the above scheme of classification :

3. *The Soul or Jīva*

A jīva or a soul is a conscious substance. Consciousness is the essence of the soul.¹ It is always

Jīva is a soul.

present in the soul, though its nature and degree may vary.

Souls may be theoretically arranged in a continuous series according to the degrees of consciousness.

Souls have varying degrees and kinds of knowledge.

At the highest end of the scale would be perfect souls that have overcome all karmas and attained omniscience. At the lowest end

would stand the most imperfect souls which inhabit bodies of earth, water, fire, air or vegetable.² In them life and consciousness appear to be absent. But really even here consciousness of a tactual kind is present ; only consciousness is in a dormant form due to the overpowering influence of karma-obstacles.³ Midway between would lie souls having two to five senses, like worms, ants, bees and men.⁴

It is the soul that knows things, performs activities,

The soul manifests itself and others. It is eternal.

enjoys pleasures, suffers pains, and illumines itself and other objects.

The soul is eternal, but it also undergoes change of states. It is different from the

² Vanaśpaṭyantānām ekam, *Tat. sūtr.*, 2.23.

³ Vide Guṇaratna (*Śaḍ.*, 49) for elaborate arguments supporting the existence of life in plants and minerals.

⁴ Kṛmi-piṭṭlikā-bhramara-manuṣyādīnām ekaikavṛddhāni, *Tat. sūtr.*, 2.23

body and its existence is directly proved by its consciousness of itself.¹

Due to the inclinations generated by its past actions

Like a light the soul pervades the entire body in which it lives.

a jīva comes to inhabit different bodies successively. Like a light it illuminates or renders conscious

the entire body in which it lives. Though it has no form (mūrti), it acquires like a light the size and form of the body wherein it lives. It is in this sense that a jīva, though formless, is said to occupy space or possess extension. The jīva is not infinite but co-extensive with the body, as it can immediately know objects only within the body. Consciousness is not present everywhere, but only in the body.²

Students of Western philosophy find it difficult to

How can the soul occupy space?

understand how a soul can possess both consciousness and extension—qualities which are diametrically

opposed, according to Descartes. Extension, Descartes thinks, is the exclusive quality of material substances, and consciousness is the exclusive quality of the soul. But the soul, as proved by Descartes, is essentially 'a thinking being'; and 'thought' seems to have no connection with space or matter. But the Jains conceive the soul primarily as a living being (jīva). Consciousness is found in every part of a living body, and if consciousness be the character of the soul, the soul should be admitted to be present in every part of the body and, therefore, to occupy space. The soul's ability to pervade space is admitted by other Indian thinkers, as also by many Greek philosophers like Plato, and even by some modern realistic philosophers like Alexander. It should be borne

The soul does not fill space like matter.

in mind, however, that a soul's occupying space simply means its presence in the different parts of space and not filling space

¹ Nyāyavārtā, verse 31 and Dravya-saṅgraha, verse 2.

² Vide Sūd., 8, and Tat. sū., 5.16: "Pradeśa-sambhāra-viśarpābhyām pradīpavat."

like a material body. A material body fills a part of space in such a way that, while it is there, no other matter can occupy it. But a soul's presence in a particular space does not prevent another soul's presence there; two souls may be present at the same place, the Jainas point out, just as two lights can illumine the same area.

The Jaina philosophers feel it necessary to meet the Cārvāka views regarding the soul. Guṇaratna, a great Jaina thinker, gives elaborate arguments to meet Cārvāka scepticism and prove the existence of the soul. We may state here the purport of his arguments.

The existence of the soul is directly proved by such uncontradicted immediate experience as 'I feel pleasure.' When we perceive the quality of a substance, we say, we perceive the substance. For

Proofs for the existence of the soul.

example, on seeing the soul is immediately known in the perception of its qualities like pleasure.

For a rosy colour we hold that we perceive the substance rose, to which the colour belongs. On similar grounds we can hold that the soul is directly perceived, because we immediately perceive such characters of the

soul as pleasure, pain, remembrance, volition, doubts, knowledge, etc. The existence of the soul may also be indirectly proved by inferences like the following: The

body can be moved and controlled at will like a car, and, therefore, there must be some one that moves and controls it. The senses of sight, hearing, etc., are only instruments, and there must be some agent who employs them. Again, there must be some efficient cause or producer of the body, because material objects which have a beginning are found to require some agent for shaping their material cause. Thus in different ways the existence of a substance like the soul can also be inferred. The

It is also knowable immediately through many inferences.

The Cārvāka view that unconscious material elements can produce consciousness is not verified by perception.

Cārvāka holds that consciousness is the product of the material elements. But we never perceive anywhere the generation of consciousness by the unconscious material elements. The Cārvāka believes that perception is the only valid source of knowledge. How can he then

believe in what perception fails to show? Even if inference were accepted as valid by the Cārvāka, it would not prove that consciousness is the effect of matter or the material body. nor by inference.

Because, if the body were the cause of consciousness, there would be no absence of consciousness so long as the body existed, and, consequently, loss of consciousness in sleep, swoon, or in a dead body would be impossible. Besides, we find that there is no relation of concomitant variation between the body and consciousness, the development and decay of the body are not invariably followed by corresponding changes of consciousness. So, no causal connection between matter and consciousness; can be proved even by inference. The Cārvāka would perhaps say that, though every kind of matter does not produce consciousness, when matter is organized into a living body, it produces consciousness. In reply to this it may be pointed out that, but for some organizer, matter would not be formed into a living body, and that this organizer is the soul itself. Judgments like 'I am stout,' 'I am thin,' on which the Cārvāka tries to prove that the soul is identical with the body, must be understood figuratively and not literally. The soul sometimes treats the body as itself, because it is intimately interested in the body. Again, if the soul were absolutely unreal, the negative judgment 'there is no soul in the body' would be unintelligible. Denial of something in any place implies the knowledge of its existence somewhere in some form.¹ Apart from all other arguments, to say that 'my self does not exist' is as absurd as to say 'my mother is barren' or 'this sun, the giver of light, does not exist.'

4. *The Inanimate Substances or Ajīvas*

The physical world in which souls live is constituted

The five inanimate substances : matter, time, space, dharma and adharma.

by the material bodies that the souls occupy and the other material objects that form their environment. But in addition to these

¹ 'Yannigidhyate tat sāmānyena vidyate eva,' Guṇaratna on Śaḍ., 48-49.

material substances, there are space, time and the conditions of motion and rest, without which the world and its events cannot be fully explained. Let us consider these different substances one by one.

(i) Matter or Pudgala

Matter in Jaina philosophy is called pudgala, which etymologically means 'that which is liable to integration and disintegration.'¹ Material substances can combine together to form larger and larger wholes, and can also break up into smaller and smaller parts. The smallest parts of matter which cannot be further divided, being partless, are called atoms (aṇu). Two or more such atoms may combine together to form compounds (saṅghāta or skandha). Our bodies and the objects of nature are such compounds of material atoms. Mind (manas), speech and breath are also the products of matter.²

A material substance (pudgala) possesses the four qualities of touch, taste, smell and colour.³ These qualities are possessed by atoms and also by their products, the compounds. Sound is not an original quality like these four, as most other Indian philosophers hold. The Jaina points out that sound along with light, heat, shadow, darkness, union, disunion, fineness, grossness, shape is produced later by the accidental modifications of matter.⁴

¹ 'Pūrayanti galanti ca,' *Sarvadarsana*, III.

² *Tat. sūtr.*, 5.19.

³ *Ibid.*, 5.23.

⁴ *Ibid.*, 5.24.

(ii) Space or Ākāśa

The function of space is to afford room for the exis-

Space gives room for extension. tence of all extended substances. Soul, matter, dharma and adharma all exist in space. Though space is imperceptible, its existence is known by an inference like the following: Substances which are extended can have extension only in some place, and that is called ākāśa. Though to be extended is the very nature of some substances, and no substance which lacks that nature can be made extended by space, yet it is also true that, to be extended, a substance requires space, as a necessary condition.

It should not be thought that extension is explained fully by substances extended, without the supposition of some other condition like space. For, substances are those that occupy or pervade, and space is that which is occupied or pervaded.¹ Space is not the same as extension, as Descartes thought, but it is the locus of extension or of extended things, as Locke held.

The Jaina distinguishes two kinds of space, the space containing the world where souls and the other substances live (lokākāśa), and empty space beyond such world (alokākāśa).

(iii) Time or Kāla

Time (kāla), as Umāsvāmī states, makes possible the continuity, modification, movement, newness and oldness of substances.² Like space, time also is inferred,

Time is the necessary condition of duration, change, motion, newness and oldness.

¹ Guṇaratna on Śaḍ., 49.

² Tat. sūtr., 5. 22: "vartanā-pariṇāma-kriyāḥ paratvāparatve ca kālaśya."

though not perceived. It is inferred as the condition without which substances could not have the characters just mentioned, though it is true that time alone cannot cause a thing to have the characters. Without time a thing cannot endure or *continue* to exist ; duration implies moments of time in which existence is prolonged. Modification or change of states also cannot be conceived without time. A mango can be green and ripe only successively, i.e. at different moments of time ; and without the supposition of time-distinctions we cannot understand how a thing can possess such incompatible characters. Similarly, movement which implies the assumption of successive states by an object can be conceived only with the supposition of time. Lastly, the distinction between the old and the new, the earlier and the later cannot be explained without time. These are, therefore, the grounds on which the existence of time can be inferred.

The reason why time is not regarded as an *astikāya* is that time is one indivisible substance. One and the same time is present everywhere in the world.¹ Unlike all other substances called *astikāyas*, time is devoid of extension in space.

Jaina writers sometimes distinguished between real time (*pāramārthika kāla*) and empirical or conventional time (*vyāvahārika kāla*, also called *saṃaya*). Continuity or duration (*vartanā*) is the mark of real time, whereas changes of all kinds are the marks

¹ Guṇaratna on *Śaḍ.*, p. 163.

of empirical time. It is this latter (*samaya*) which is conventionally divided into moments, hours, etc., and is limited by a beginning and an end. But real time is formless and eternal. By imposing conventional limitations and distinctions on real time, empirical time is produced.¹

Some Jaina teachers, Guṇaratna observes, do not admit time as a separate substance, but regard it as a mode (*paryāya*) of the other substances.²

(iv) Dharma and Adharma

Like space and time, these two substances also are inferentially proved to exist. Mobility and immobility—motion and rest—are the grounds of such inference. The Jaina argues that just as the movement of a fish in the river, though initiated by the fish itself, would not be possible without the *medium* of water, which is, therefore, a necessary condition, similarly the movement of a soul or a material thing requires some auxiliary condition, without which its motion would not be possible. Such a condition is the substance called dharma. Dharma can only favour or help the motion of moving objects; it cannot make a non-moving object move, just as water cannot make a fish move. Adharma, on the contrary, is the substance that helps the restful state or immobility of objects, just as the shade of a tree helps a traveller to rest, or the earth supports

Dharma and adharma are the conditions of movement and rest.

¹ *Dravya-saṅgraha*, 21.

² *Śaḍ.*, p. 162.

things that rest on it. It cannot, however, arrest the movement of any moving object. Dharma and adharma, though thus opposed, are also similar. They are formless passive substances. in so far as both are eternal, formless, non-moving, and both pervade the entire world-space (*lokākāśa*). As conditions of motion and rest, both are passive,¹ and not active. Dharma and adharma are used here in a technical sense, different from the ordinary moral sense.²

Regarding all the four substances—space, time, dharma and adharma—it should be noted that as causal conditions they all have a peculiar status. The causal conditions (*kāraṇas*) may be distinguished into three chief kinds, agent (as potter is of the pot) and instrument (as the potter's wheel is of the pot) and material (as clay is of the pot). Space, time, etc., come under the category of instrumental conditions, but they should be distinguished from ordinary conditions of that kind, being more indirect and passive than ordinary instrumental conditions. Guṇaratna gives them, therefore, a special name, *apekṣākāraṇa*.³ The stone on which the potter's wheel rests may be cited as a condition of this kind in relation to the pot. Space, time, etc., are similar conditions.

IV. THE JAINA ETHICS AND RELIGION

The most important part of Jaina philosophy is its Ethics. Metaphysics or epistemology—in fact, knowledge of any kind—is useful for the Jaina in so far as it helps him to right conduct. The goal of right conduct

¹ 'Udāsīnakāraṇa' (Guṇaratna, *Īśā.*, p. 172).

² Cf. "Dharmādayaḥ asti'śāśyā sāmayikāḥ" etc. (*Tattvārtharāja-cārttika*, 5. 1. 17-18).

³ *Īśā.*, p. 162.

again is salvation (mokṣa), which means negatively removal of all bondage of the soul and positively the attainment of perfection.

1. *Bondage of the Soul*

Bondage means, in Indian philosophy in general, the liability of the individual to birth and all consequent sufferings. This general conception of bondage is differently interpreted by the

The soul in itself is possessed of infinite potentiality.

different systems in the light of their ideas of the individual and the world. The suffering individual, for the Jaina, is a jiva or a living, conscious substance called the soul. This soul is inherently perfect. It has infinite potentiality within. Infinite knowledge, infinite faith, infinite power and infinite bliss, can all be attained by the soul if it can only remove from within itself all obstacles that stand in the way. Just as the sun shines forth to illuminate the entire world as soon as the atmosphere is freed of cloud and fog, similarly the soul attains omniscience and the other perfections inherent in it as soon as the obstacles are removed. But what then are these obstacles, and how

Due to karma it is associated with matter and thus its limitation or bondage occurs.

do they come to rob the soul of its native perfections? The obstacles, the Jaina asserts, are constituted by matter-particles which infect

the soul and overpower its natural qualities. In other words, the limitations that we find in any individual soul are due to the material body with which the soul has identified itself. The body is made of particles of matter (pudgala), and for

the formation of a particular kind of body, particular kinds of matter-particles are to be arranged and organized in a particular way. In the formation of this body the guiding force is the soul's own passions. Roughly speaking, a soul acquires the body that it inwardly craves for. The karma or the sum of the past life of a soul—its past thought, speech and activity—generates in it certain blind cravings and passions that seek satisfaction. These cravings in a soul attract to it particular sorts of matter-particles and organize them into the body unconsciously desired. The soul with its passions or karma-forces is, therefore, regarded by the Jaina as the organizer of the body, the efficient cause of it, whereas matter (pudgala) is said to be its material cause. The organism which the soul thus acquires, consists not simply of the gross perceptible body, but also the senses, manas, the vital forces and all the other elements which curb and limit the soul's potentialities.

The body that we have inherited from our parents is not a mere chance acquisition. Our past karma determines the family in which we are born as well as the nature of the body—its colour, stature, shape, longevity, the number and nature of sense organs and motor organs which it possesses. While all of these, taken collectively, may be said to be due to karma, taken also in the collective sense (of the sum-total of all tendencies generated by past life), each of these taken separately may be said to be due to a particular kind of karma. The Jaina,

Passions attract matter to the soul.

The body and other conditions of an individual are all due to karma.

therefore, speaks of the many karmas, and names each after the effect it produces. For example, gotra-karma is the karma that determines the family into which one is born, āyu-karma is the karma determining the length of life, and so on. Similarly, we are told of the karma that clouds knowledge (jñānāvaraṇīya), that which clouds faith (darśanāvaraṇīya), that which produces delusion (mohanīya), that which produces emotions of pleasure and pain (vedanīya), and so on.

The passions which cause bondage are anger, pride, infatuation and greed (krodha, mānsa, māyā, lobha).¹ These are called kaṣāyas (i.e. sticky substances), because the presence of these in the soul makes matter-particles stick to it.

As the nature and number of material particles attracted by the soul depend on its karma, these particles themselves come to be called karma-matter (karma-pudgala) or even simply karma. The flow of such karma-matter into the soul is called, therefore, influx (āsrava) of karma.

Bondage, in Jaina philosophy, comes, therefore, to mean the fact that jīva, infected with passions, takes up matter in accordance with its karma.² As passion or bad disposition (bhāva) of the soul is the internal and primary cause of

The passions causing bondage are anger, pride, infatuation and greed.

The influx of karma-matter into the soul.

Bondage of the soul to matter is due to its bondage to bad dispositions or passions.

¹ Tat. sūtr., 8. 9.

² Tat. sūtr., 8. 2: "sakaṣāyatvāj-jīvaḥ karmaṇo योग्यān pudgalān-ādatte sa bandhaḥ."

bondage, and the influx of matter into the soul is only the effect of it, the Jaina writers point out that bondage or fall of the soul begins in thought. They, therefore, speak sometimes of two kinds of bondage: (1) internal or ideal bondage, *i.e.* the soul's bondage to bad disposition (*bhāva-bandha*), and (2) its effect, material bondage, *i.e.* the soul's actual association with matter (*dravya-bandha*).

The interpenetration of matter and soul (which, according to the Jaina, is the nature of bondage) would appear to be crude to some. But we should bear in mind that the soul, for the Jaina, is not devoid of extension, but co-extensive with the living body. The soul is the *jīva*, the living being; and in every part of the living body we find matter as well as consciousness and, therefore, the compresence or interpenetration of matter and the conscious living substance (*i.e.* the soul) is as good a fact of experience as the interpenetration of milk and water in a mixture of the two or of fire and iron in a red-hot iron ball.¹

2. *Liberation*

If bondage of the soul is its association with matter, liberation must mean the complete dissociation of the soul from matter. This can be attained by stopping the influx of new matter into the soul as well as by completely eliminating the matter with which the soul has become already mingled. The first process is called *saṁvara* or the stoppage of influx and the second *nirjarā* or exhaustion or wearing out of karma in the soul.

Liberation is the expulsion of matter from the soul.

¹ Guṇaratna, *Com. on Śed.*, p. 181.

We have seen that the passions or cravings of the soul lead to the association of the soul with matter.

Looking into the cause of the passions themselves, we find that they ultimately spring

from our ignorance. Our ignorance about the real nature of our souls

and other things leads to anger, vanity, infatuation and greed. Knowledge alone can re-

move ignorance. The Jainas, therefore, stress the necessity of right

knowledge (*samyag-jñāna*) or the knowledge of reality.

Right knowledge can be obtained only by studying carefully the teachings of the

omniscient *tīrthaṅkaras* or teachers who have already attained libera-

tion and are, therefore, fit to lead others out of bondage. But before we feel inclined to

study their teachings, we must have a general acquaintance with the essentials of the teachings and

consequent faith in the competence of these teachers. This right sort of faith based on general preliminary

acquaintance (called *samyag-darśana*) paves the way for right knowledge

and is, therefore, regarded indispensable. But mere knowledge is useless unless it is put

to practice. Right conduct (*samyak-cāritra*) is, therefore, regarded by the Jaina as the third indispensable

condition of liberation. In right conduct, a man has to control his

passions, his senses, his thought, speech and action, in the light of right knowledge.

This enables him to stop the influx of new karma and

Ignorance is the cause of passions.

Knowledge alone can remove ignorance.

Right knowledge is obtainable from the teachings of the omniscient *tīrthaṅkaras*.

Therefore, faith in them is necessary.

Knowledge is perfected in right conduct.

eradicate old karmas, securing gradually thereby the elimination of matter which ties the soul into bondage.

Right faith, right knowledge, and right conduct

Hence, right faith, right knowledge and right conduct constitute the three gems of a good life.

have, therefore, come to be known in Jaina ethics as the three gems (triratna) that shine in a good life.

In the very first sūtra of *Tattvārthā-dhigama-sūtra*, Umāsvāmi states this cardinal teaching

They jointly produce liberation.

of Jainism: The path to liberation lies through right faith, knowledge and conduct.¹ Liberation is the

joint effect of these three.

Right faith (samyag-darśana).—Umāsvāmi defines right faith as the attitude of respect (śraddhā) towards truth. This faith may be inborn and

Right faith is respect for truth.

spontaneous in some; by others it may be acquired by learning or culture.² In any case faith can arise only when the karmas that stand in its way (i.e. the tendencies that cause disbelief) are allayed or worn out.

It should not be thought that Jainism wants its followers to accept blindly what is taught by the *tirthaṅkaras*. As Maṇibhadra, a Jaina writer, states, the

attitude of the Jaina is rationalistic, rather than dogmatic, and it is summed up in the following dictum: I have no bias for Mahāvīra, and none against Kapila and others. Reasonable words alone are acceptable to me, whose-ever they might be.³

The initial faith is a reasonable attitude, first, because it is based on some initial acquaintance and is proportionate to this, and secondly, because without such faith there would be no incentive to further study. Even a sceptical philosopher,

It is the minimum will to believe, without which no study can rationally begin.

¹ 'Samyag-darśana-jñāna-cāritrāṇi mokṣa-mārgaḥ.'

² *Tat. sūt.*, 1, 2-3.

³ *Com. on Ṣaḍ.*, 44 (Chowkhamba ed., p. 89).

who begins to study something rationally, must possess some faith in the utility of his method and the subject he studies.

Starting with a partial faith and studying further, if the beginner finds that the Jaina teachings are reasonable, his faith increases. The Jaina claims that the more one studies these views, the greater would faith grow. Perfect knowledge would cause, therefore, perfect faith (*samyag-darśana*).

Perfect faith can result only from perfect knowledge.

Right knowledge (samyag-jñāna).—While faith is initially based on knowledge of only the essentials of the Jaina teachings, right knowledge is, as *Dravya-saṅgraha* states, the "detailed cognition of the real nature of the ego and non-ego which is free from doubt, error and uncertainty" (verse

Right knowledge consists in the detailed knowledge of all truths.

42). We have already seen in connection with Jaina epistemology the different ways in which correct cognition can be obtained. As in the case of faith, so in the case of knowledge, the existence of certain innate tendencies (*karmas*) stand in the way of correct knowledge. For the attainment of

perfect knowledge the removal of these *karmas* should be attempted. Perfection of this process ends in the attainment of absolute omniscience (*kevalajñāna*).

Right conduct (samyak-cāritra).—Good conduct is briefly described in *Dravya-saṅgraha* (verse 45) as refraining from what is harmful and doing what is beneficial. In a word, it is what helps the self to get rid of the *karmas* that lead

Right conduct is refraining from wrong and performing what is right.

him to bondage and suffering. For the stoppage of the influx of new *karmas*, and eradication of the old, one must (1) take the five great vows (*pañca-mahāvratā*), (2) practise extreme carefulness (*saṃti*) in walking, speaking, receiving alms and other things, and answering calls of nature, so as to avoid doing any harm to any life, (3) practise restraint (*guṇti*) of thought, speech and bodily movements, (4) practise *dharma* of ten different kinds, namely, forgiveness, humility, straightforwardness, truthfulness, cleanliness, self-restraint, austerity (internal and external), sacrifice, non-attachment

and celibacy, (5) meditate on the cardinal truths taught regarding the self and the world, (6) conquer, through fortitude, all pains and discomforts that arise from hunger, thirst, heat, cold, etc., and (7) attain equanimity, purity, absolute greedlessness and perfect conduct.¹

But Jaina writers are not unanimous regarding the necessity of all the above steps. Some of them select the first, namely, the five great vows, as sufficient for perfection of conduct. Many of the other steps recommended are found to repeat in different ways the basic principles of these five.

The value of the five great vows (*pañca-mahāvratā*) is recognized by the Upaniṣadic thinkers as well as the Bauddhas (who call them *Pañca-śīla*). The principles of most of these are recognized also in the ten Christian commandments. But the Jainas try to practise these with a rigour scarcely found elsewhere. These vows consist of the following:

Ahiṃsā: Abstinence from all injury to life.—Life, as we have seen, exists not simply in the moving beings (*trasa*), but also in some non-living ones (*sthāvara*) such as plants and beings inhabiting bodies of earth. The ideal of the Jaina is, therefore, to avoid molesting life not only of the moving creatures but also of the non-moving ones. The Jaina saints who try to follow this ideal are, therefore, found even to breathe through a piece of cloth tied over their noses lest they inhale and destroy the life of any organism floating in the air. Ordinary laymen would find this ideal too high. They are advised, therefore, to begin with the partial observance of *ahiṃsā* by abstaining from injury to moving beings which are endowed with at least two senses.

The Jaina attitude of *ahiṃsā* is the logical outcome of their metaphysical theory of the potential equality of all souls and recognition of the principle of reciprocity, i.e. we should do to others as we would be done by. It is unfair to think that *ahiṃsā* is the remnant of the savage's primitive awe for life.

The five great vows form the basis of right conduct.

The principles underlying these accepted by many other faiths.

(1) The vow of *ahiṃsā* or non-injury to life.

It is based on the idea of potential equality of all souls.

as some critics have thought.¹ If every soul, however lowly now, can become as great as any other soul, then one should recognize the value and the claims of every life as his own. 'Respect for life wherever found' becomes then an irresistible duty.

The Jaina tries to perform this duty in every minute act in life, because he wants to be thoroughly consistent with the basic principle he has accepted. The Jaina also thinks,

Ahimsā must be practised in thought, speech and action.

therefore, that it is not sufficient simply not to take life; one should not even think and speak of taking life, nor even permit nor encourage others to take life. Otherwise the vow of *ahimsā* cannot be fully maintained.

Satyam: Abstinence from falsehood.—This vow also is taken very rigorously. Truthfulness is not speaking what is only true, but speaking what is true as well as good and pleasant. Without these qualifications the practice of truthfulness would be of little use as an aid to moral progress.

Because, merely speaking what is true may sometimes descend into garrulity, vulgarity, frivolity, vilification, etc. Truth set as the ideal of this vow is sometimes called, therefore, *suṇṛta*, to suggest the fuller meaning of truth which is also wholesome and pleasant. It is also pointed out that for the perfect maintenance of this vow, one must conquer greed, fear and anger and even restrain the habit of jesting.

Asteyam: Abstinence from stealing.—This vow consists in not taking what is not given. The sanctity of the property of others, like that of their lives, is recognized by the Jainas. A Jaina writer wittily remarks that wealth is but the outer life of man and to rob wealth is to rob life. If human

(2) The vow of *satya* or truthfulness consists in speaking what is true, as well as pleasant and good.

(3) The vow of *asteya* or non-stealing is based on the idea of the sanctity of property.

¹ Vide Mackenzie, *Hindu Ethics*, p. 112: "The root idea of the doctrine of *ahimsā* . . . is the awe with which the savage regards life in all its forms." But even the early Jaina teachers make it clear that it is in the sense of fellow-feeling and equity on which *ahimsā* is based. Vide *Ācārāṅga-sūtra*, I. 4. 2. (Jacobi, *Jainasūtras*, Part I, pp. 88-89), and *Sūtra-kṛtāṅga*, I. 1. 4. (op. cit. Part II, pp. 247-48), which speak of *ahimsā* as 'the legitimate conclusion from the principle of reciprocity.'

life is impossible without wealth in some form or other, there is no exaggeration in the Jaina thought that depriving a man of his wealth is virtually to deprive him of an essential condition on which his life depends. This vow, therefore, may be said to be logically inseparable from the vow of *ahimsā*, the sanctity of property being a logical sequence of the sanctity of life.

Brahmacaryam : Abstinence from self-indulgence.—

(4) The vow of *brahmacaryā* consists in abstaining from all forms of self-indulgence.

This vow is generally interpreted as that of celibacy. But the Jaina attaches to this also a deeper meaning that raises the standard of this vow far above mere sexual self-continnence.

It is interpreted as the vow to give up self-indulgence (*kāma*) of every form. The Jaina, bent on self-criticism, discerns that though outwardly indulgence may stop, it may continue still in subtle forms—in speech, in thought, in the hopes of enjoyment hereafter in heaven, even in asking or permitting others to indulge themselves. For the complete maintenance of this vow one must, therefore, desist from all forms of self-indulgence—external and internal, subtle and gross, mundane and extra-mundane, direct and indirect.

Aparigraha : Abstinence from all attachment.—This is

(5) The vow of *aparigraha* consists in abstaining from all attachment to sense-objects.

explained as the vow to give up all attachment for the objects of the five senses—pleasant sound, touch, colour, taste and smell.¹ As attachment to the world's objects means bondage to

the world, and the force of this causes rebirth, liberation is impossible without the withdrawal of attachment.

Knowledge, faith and conduct are inseparably

Right knowledge, faith and conduct jointly bring about liberation consisting in fourfold perfection.

bound up ; and the progress and degeneration of the one react on the other two. Perfection of conduct goes hand in hand with the perfection of knowledge and faith. When a person, through the harmonious development of these three

¹ *Acārāṅga-sūtra*, Jacobi, E. T., p. 208.

succeeds in overcoming the forces of all passions and karmas, old and new, the soul becomes free from its bondage to matter and attains liberation. Being free from the obstacles of matter, the soul realizes its inherent potentiality. It attains the fourfold perfection (*ananta-catustaya*), namely, infinite knowledge, infinite faith, infinite power and infinite bliss.

3. *Jainism as a Religion Without God*

Jainism presents, along with Buddhism, a religion without belief in God. The grounds of Jain atheism : atheism of the Jainas is based on the following chief grounds¹ :

- (i) God is not perceived, but sought to be proved through inference. The Nyāya holds, for example, that as every product, like a house, is the work of an agent (*kartā*), the world, which is a product, must also have an agent or creator who is called God. But this inference is inconclusive, because one of the premises, 'the world is a product,' is doubtful. How is it proved that the world is a product? It cannot be said that the world is a product because it has parts. Though *ākāśa* has parts, it is not admitted by the Nyāya to be a product; it is said to be an eternal substance not produced by anything else. Again, wherever we perceive anything being produced, the producer or the agent is found to work on the material with his limbs. God is said to be

¹ *Vide Prameya-kamala-mārtanda*, Chap. II, and *Syādvādamānjarī*, verse 6 and com. for elaborate arguments in support of atheism.

bodiless. How can He, then, work on matter to produce the world ?

(ii) Like the existence of God, the qualities of omnipotence, unity, eternity and perfection, generally

(2) The qualities attributed to God are not reasonable. attributed to Him, are also doubtful. If God is omnipotent, He

should be supposed to be the cause of all things. But this is not true, because we perceive daily that many objects like houses, pots, etc., are not produced by God. God is held to be one on the ground that, if there were many gods, they would act with different plans and purposes, and consequently a harmonious world, as we have, would not have been possible. But this argument is not sound, because we observe that many human beings like masons, and even lower animals like ants and bees, act together harmoniously to build objects like palaces, ant-hills, and hives. God, again, is said to be eternally perfect. But eternal perfection is a meaningless epithet. Perfection is only a removal of imperfection, and it is meaningless to call a being perfect who was never imperfect.

Though the Jainas thus come to reject God, as the

The Jainas worship the liberated souls possessing God-like qualities, instead of God. creator of the world, they think it necessary to meditate on and worship the liberated, perfect souls

(siddhas). The liberated souls possessing the God-like perfections mentioned already easily take the place of God. Prayers are offered to them for guidance and inspiration. The offering of prayers to five kinds of pure souls (pañca-parameṣṭi) ¹

¹ These are the Arhats, the Siddhas, the Acāryas, the Upādhyāyas and the Sādhus; vide *Draṅga-saṅgraha*, 49.

also forms a part of the daily routine of the devout Jainas. In spite of the absence of a creator-God, the

The religious fervour of the Jainas does not, therefore, suffer.

religious spirit of the Jaina lacks neither in internal fervour nor in external ceremonial expressions. By meditating on the pure qualities of the liberated and those who are advanced on the path to liberation, the Jaina reminds himself daily of the possibility of attaining the high destiny. He purifies his mind by the contemplation of the pure and strengthens his heart for the uphill journey to liberation. Worship, for the Jaina, is not seeking for mercy and pardon. The Jaina believes in the inexorable moral law of karma which no mercy can bend. The consequences of past misdeeds can only be counteracted by generating within the soul strong opposite forces of good thought, good speech and good action. Every one must work out his own salvation. The liberated souls serve only

Jainism is a religion of self-help.

as beacon lights. The religion of the Jaina is, therefore, a religion of the strong and the brave. It is a religion of self-help. This is why the liberated soul is called a victor (jina) and a hero (vira). In this respect it has some other parallels in India, in Buddhism, the Sāṅkhya and the Advaita-Vedānta.

CHAPTER IV

THE BAUDDHA PHILOSOPHY

I. INTRODUCTION

The life of Siddhārtha or Gautama Buddha, the
Light of Asia and the founder of
Buddhism, is fairly well-known.
The life of Gautama
Buddha.

Born in a royal family at Kapilā-
vastu (on the foot-hills of the Himālayas, north of
Bihar) in the sixth century B.C., Siddhārtha renounced
the world early in life. The sights of disease, old age
and death impressed the young prince with the idea
that the world was full of suffering, and the life of a
care-free mendicant suggested to him a possible way of
escape. As an ascetic, he was restless in search of the
real source of all sufferings and of the means of complete
deliverance. He sought light from many religious
teachers and learned scholars of the day and practised
great austerities ; but nothing satisfied him. This
threw him back on his own resources. With an iron
will and a mind free from all disturbing thoughts and
passions, he endeavoured to unravel, through continued
intense meditation, the mystery of the world's miseries,
till at last his ambition was crowned with success.
Siddhārtha became Buddha or the Enlightened. The
message of his enlightenment laid the foundation of
both Buddhistic religion and philosophy, which in
course of time spread far and wide—to Ceylon, Burma

and Siam in the south, and to Tibet, China, Japan and Korea in the north.

Like all great teachers of ancient times Buddha taught by conversation, and his teachings were also handed down for a long time through oral instruction imparted by his disciples to successive generations. Our knowledge about Buddha's teachings

The teachings of Buddha were oral.

They were recorded later by his followers.

depends to-day chiefly on the *Tripitakas* or the three baskets of teachings which are claimed to contain his views as reported by his most intimate disciples. These three canonical works are named

Vinaya-piṭaka, *Sutta-piṭaka* and *Abhidhamma-piṭaka*. Of these the first deals chiefly with rules of conduct, the second contains sermons with parables, and the third deals with problems of philosophical interest. All these three contain information regarding early Buddhist philosophy. These works are in the Pāli dialect.

The three accepted works—the Tripitakas.

In course of time, as his followers increased in number, they were divided into different schools. The most well-known division of Buddhism on religious principles was into the *Hīnayāna* and the *Mahāyāna*. The first flourished in the south and its present stronghold is in Ceylon, Burma and Siam. Its literature, which is vast, is in Pāli. It is claimed to be more orthodox and faithful to the teachings of Buddha. *Hīnayāna* is sometimes called also southern or Pāli Buddhism. *Mahāyāna* flourished mostly in

known division of Buddhism on religious principles was into the *Hīnayāna* and the *Mahāyāna*. The first flourished in the south and its present stronghold is in Ceylon, Burma and Siam. Its literature, which is vast, is in Pāli. It is claimed to be more orthodox and faithful to the teachings of Buddha. *Hīnayāna* is sometimes called also southern or Pāli Buddhism. *Mahāyāna* flourished mostly in

the north and its adherents are to be found in Tibet, China and Japan. It adopted Sanskrit for philosophical discussion and thus the enormous Buddhist literature in Sanskrit came to be developed. Most of this literature was translated into Tibetan and Chinese and thus became naturalized in the lands in which Buddhism flourished. Many such valuable Sanskrit works lost in India are now being recovered from those translations and restored to Sanskrit. Mahāyāna is also known as northern or Sanskrit Buddhism.

As Buddhism flourished in different lands, it became coloured and changed by the original
The vast literature of Buddhism.
 faiths and ideas of the converts.

The different schools of Buddhism which thus arose are so numerous and the total output of philosophical works in the different languages is so vast that a thorough acquaintance with Buddhist philosophy requires the talents of a versatile linguist, as well as the insight of a philosopher—and yet one life-time may be found all too short for the purpose. Our account of Bauddha philosophy will necessarily be very brief and so inadequate. We shall first try to give the chief teachings of Buddha as found in the dialogues attributed to him, and next deal with some aspects of Bauddha philosophy as developed later by his followers in the different schools, and conclude with a short account of the main religious tendencies of the Hīnayāna and the Mahāyāna school.

II. THE TEACHINGS OF BUDDHA : THE FOUR NOBLE TRUTHS

1. *The Anti-Metaphysical Attitude*

Buddha was primarily an ethical teacher and reformer, not a philosopher. The message of his enlightenment points to man the way of life that leads beyond suffering. When any one asked Buddha metaphysical questions as to whether the soul was different from the body, whether it survived death, whether the world was finite or infinite, eternal or non-eternal, etc., he avoided discussing them. Discussion of problems for the solution of which there is not sufficient evidence leads only to different partial views like the conflicting one-sided accounts of an elephant given by different blind persons who touch its different parts.¹ Buddha referred to scores of such metaphysical views advanced by earlier thinkers and warned that all of them were inadequate, since they were based on the uncertain sense-experience of those persons and their cravings, hopes and fears.² Such speculation should be avoided, Buddha repeatedly pointed out, also because it does not take man nearer to his goal, viz. Arhatship or Vimutti, the state of freedom from all suffering. On the contrary a man who indulges in such speculation remains all the more entangled in the net of theories he himself

¹ For this parable vide Rhys Davids, *Dialogues of Buddha*, I, pp. 187-88.

² *Brahma-jāla-sutta*, *op. cit.*, pp. 52-5

has woven.¹ The most urgent problem is to 'end misery. One who indulges in theoretical speculation on the soul and the world, while he is writhing in pain, behaves like the foolish man, with a poisonous arrow plunged into his flank, whiling away time on speculation regarding the origin, the maker and the thrower of the arrow, instead of trying to pull it out immediately.'²

Ten questions are often mentioned by Buddha (*vide* *Poṭṭhapāda Sutta, Dialogues*, I, R. Davids, pp. 254-57) as uncertain and ethically unprofitable and, therefore, not discussed by him: (1) Is the world eternal? (2) Is it non-eternal? (3) Is it finite? (4) Is it infinite? (5) Is the soul the same as the body? (6) Is it different from the body? (7) Does one who has known the truth live again after death? (8) Does he not live again after death? (9) Does he both live again and not live again after death? (10) Does he neither live nor not-live again after death? These have come to be known as the ten 'indeterminable questions' (in Pali, *avyākataṇi*) in Buddhist literature and made the subject of a discourse in *Saṃyutta Nikāya* called *Avyākata Saṃyutta*.³

Instead of discussing metaphysical questions, which are ethically useless and intellectually uncertain, Buddha always tried to enlighten persons on the most important questions of sorrow, its origin, its cessation and the path leading to its cessation. Because, as he puts it: "This does profit, has to do with fundamentals of religion, and tends to aversion, absence of passion, cessation, quiescence, knowledge, supreme wisdom and nirvāṇa."⁴

¹ *Ibid.*, p. 44.

² *Majjhima-nikāya-sutta*, 63 (Warren, p. 120).

³ *Vide Dialogues*, I, p. 167. ⁴ *Majjhima-nikāya-sutta*, 63 (Warren, p. 122).

The answers to the four questions noted above constitute, as we know, the essence of Buddha's enlightenment which he is eager to share with all fellow-beings. These have come to be known as the four noble truths (catvāri ārya-satyāni). They are: (1)

Life in the world is full of suffering. (2) There is a cause of this suffering. (3) It is possible to stop suffering. (4) There is a path which leads to the cessation of suffering (duḥkha, duḥkha-samudāya, duḥkha-nirodha, duḥkha-nirodha-mārga). All the teachings of Gautama centre round these four.

The four noble truths concerning suffering.

2. The First Noble Truth about Suffering

The sights of suffering which upset the mind of young Siddhārtha were of disease, old age and death. But to the enlightened mind of Buddha not simply these, but the very essential conditions of life, human and sub-human, appeared, without exception, to be fraught with misery. Birth, old age, disease, death, sorrow, grief, wish, despair, in short, all that is born of attachment, is misery.¹ We have mentioned in the *General Introduction* that pessimism of this type is common to all the Indian schools; and in emphasizing the first noble truth Buddha has the support of all important Indian thinkers. The Cārvāka materialists would, of course, take exception to Buddha's wholesale condemnation of life in the world, and point out the different sources of pleasure that exist in life along

Life is full of suffering.

Even apparent pleasures are fraught with pain.

human and sub-human, appeared, without exception, to be fraught with misery. Birth, old age, disease, death, sorrow, grief, wish, despair, in short, all that is born of attachment, is misery.¹ We have mentioned in the *General Introduction* that pessimism of this type is common to all the Indian schools; and in emphasizing the first noble truth Buddha has the support of all important Indian thinkers. The Cārvāka materialists would, of course, take exception to Buddha's wholesale condemnation of life in the world, and point out the different sources of pleasure that exist in life along

¹ *Digha-nikāya-sutta*, 22 (Warren, p. 368).

with those of pain. But Buddha and many other Indian thinkers would reply that worldly pleasures appear as such only to short-sighted people. Their transitoriness, the pains felt on their loss and the fears felt lest they should be lost, and other evil consequences, make pleasures lose their charm and turn them into positive sources of fear and anxiety.

To the far-sighted worldly pleasures are sources of fear.

3. *The Second Noble Truth about the Cause of Suffering: the Chain of Twelve Links*

Though the fact of suffering is recognized by all Indian thinkers, the diagnosis of this malady is not always unanimous. The origin of life's evil is explained by Buddha in the light of his special conception of natural causation (known as Pratītyasamutpāda). According to it, nothing is unconditional; the existence of everything depends on some conditions. As the existence of every event depends on some condition, there must be something which being there our misery comes into existence. Life's suffering (old age, death, despair, grief and the like, briefly denoted by the phrase *jarā-maraṇa*) is there, says Buddha, because there is *birth* (*jāti*). If a man were not born, he would not have been subject to these miserable states. Birth again has its condition. It is the *will to become* (*bhava*),¹ the force

Suffering, like every other thing, depends on some conditions.

The chain of causes and effects that leads to suffering in the world.

¹ Mrs. Rhys Davids' rendering of this word as 'the disposition for becoming' (*Buddhism*, p. 91) is better than its ordinary rendering as 'existence,' which is nearly meaningless in this context. 'Bhāva' is used in the meaning of 'disposition,' in the Sāṅkhya and other Indian systems.

of the blind tendency or predisposition to be born, which causes our birth. But what is the cause of this tendency? Our mental clinging to or *grasping* (*upādāna*) the objects of the world is the condition responsible for our desire to be born. This clinging again is due to our *thirst* (*trṣṇā*) or craving to enjoy objects—sights, sounds, etc. But wherefrom does this desire originate? We would not have any desire for objects, had we not tasted or experienced them before. Previous *sense-experience*, tinged with some pleasant feelings (*vedanā*), is, therefore, the cause of our thirst or craving. But sense-experience could not arise but for *contact* (*sparsa*), i.e. contact of sense-organs with objects. This contact again would not arise had there not been the *six organs of cognition*, the five senses and *manas* (*śaḍāyatana*). These six again depend for their existence on the *body-mind organism* (*nāma-rūpa*), which constitutes the perceptible being of man. But this organism could not develop in the mother's womb and come into existence, if it were dead or devoid of *consciousness* (*vijñāna*). But the consciousness that descends into the embryo in the mother's womb is only the effect of the *impressions* (*samskāra*) of our past existence. The last state of the past life, which initiates our present existence, contains in a concentrated manner the impressions or effects of all our past deeds. The impressions which make for rebirth are due to *ignorance* (*avidyā*) about truth. If the transitory, painful nature of the worldly existence were perfectly realized, there would not arise in us any karma resulting in rebirth. Ignorance, therefore, is the *root cause* of impressions or tendencies that cause rebirth.

Briefly speaking, then, (1) suffering in life is due to (2) *birth*, which is due to (3)

The twelve links in the chain of suffering.

the will to be born, which is due to

(4) our mental *clinging* to objects.

Clinging again is due to (5) *thirst* or desire for objects.

This again is due to (6) *sense-experience* which is due

to (7) *sense-object-contact*, which again is due to (8)

the *six organs* of cognition: these organs are dependent

on (9) the *embryonic organism* (composed of mind and

body), which again could not develop without (10) some

initial consciousness, which again hails from (11) the

impressions of the experience of past life, which lastly

are due to (12) *ignorance* of truth.

Thus we have the *twelve links* in the chain of causation. The order and number

These constitute the wheel of existence: birth and re-birth.

of the links are not always the

same in all the sermons; but the

above has come to be regarded as

the full and standard account of the matter. It has

been popularized among Buddhists by various epithets,

such as the twelve sources (*dvādaśa nidāna*), the

wheel of existence (*bhāva-cakra*). Some devout

Buddhists remind themselves, even to-day, of this

teaching of Buddha by turning wheels which are made

to symbolize the wheel of causation. Like the telling

of beads, this forms a part of their daily prayers.

The twelve links are sometimes interpreted to cover

The present life is the effect of the past and the cause of the future.

the past, the present and the future

life, which are causally connected, so

that present life can be conveniently

explained with reference to its

past condition and its future effect.

The twelve links are, therefore, arranged with reference to

140 AN INTRODUCTION TO INDIAN PHILOSOPHY

the three periods in the following way proceeding from cause to effect :

- | | | |
|---|---|---------------|
| (1) Ignorance (avidyā) | } | Past Life. |
| (2) Impressions (saṃskāra) | | |
| (3) The initial consciousness of the embryo (vijñāna) | | |
| (4) Body and mind, the embryonic organism (nāma-rūpa) | } | Present Life. |
| (5) Six organs of knowledge (ṣaḍ-āyatana) | | |
| (6) Sense-contact (sparśa) | | |
| (7) Sense-experience (vedanā) | | |
| (8) Thirst (trṣṇā) | | |
| (9) Clinging (upādāna) | | |
| (10) Tendency to be born (bhava) | | |
| (11) Rebirth (jāti) | } | Future Life. |
| (12) Old age, death, etc. (jarā-maraṇa) | | |

Before we close this topic, we may note one very important contribution made by Indian thinkers in general and Buddha in particular; namely, the conception that the external phenomenon of life or the living organism is due to an internal impetus of desire, conscious or unconscious. The evolution of life is sought to be explained mechanically by modern biologists—both Darwinians and anti-Darwinians—with the help of material conditions, inherited and environmental. The first appearance of a horn on the cow's head, or the formation of an eye, is to them nothing more than an accidental variation, slow or sudden. The famous contemporary French philosopher, Bergson, shows that the development of life cannot be satisfactorily explained as merely accidental, but that it must be thought to be the outward expression of an internal urge or life-impetus (*élan vital*). Buddha's basic principle of the explanation of life, namely that bhava (internal predisposition, the tendency to be) leads to birth (existence of the body), or that consciousness is the condition of the development of the embryo, anticipates the Bergsonian contention that the living body is not caused simply by collection of

pieces of matter, but is the outward manifestation or explosion of an internal urge. Incidentally we may note also that Bergson's philosophy of reality as change resembles the Buddhistic doctrine of universal impermanence.

4. *The Third Noble Truth about the Cessation of Suffering*

The third noble truth that there is cessation of suffering, follows from the second truth that misery depends on some conditions. If these conditions are removed, misery would cease. But we should try to understand clearly the exact nature of the state called cessation of misery.

Suffering must cease if its cause is stopped.

First of all it should be noted that liberation from misery is a state attainable here in this very life, if certain conditions are fulfilled. When the perfect control of passions and constant contemplation of truth lead a person through the four stages of concentration to perfect wisdom (as will be described hereafter), he is no longer under the sway of worldly attachment. He has broken the fetters that bound him to the world. He is, therefore, free, liberated. He is said then to have become an Arhat—a venerable person. The state is more popularly known now as nirvāṇa—the extinction of passions and, therefore, also of misery.

Cessation of suffering, i.e. nirvāṇa, is attainable here, in this very life.

We should remember next that the attainment of this state is not necessarily a state of inactivity, as it is ordinarily misunderstood. It is true that for the attainment of perfect, clear and steady knowledge

Nirvāṇa is not inactivity.

of the fourfold truth one has to withdraw all his attention from outside and even from other ideas within, and concentrate it wholly on repeated reasoning and contemplation of the truths in all their aspects. But once wisdom has been permanently obtained, through concentrated thought, the liberated person should neither always remain rapt in meditation nor wholly withdraw from active life. We know what an active

Buddha's life was full of activity, even after his enlightenment.

life of travelling, preaching, founding brotherhood, Buddha himself led during the long forty-five years that he lived after enlightenment, and even to the last days of his eightieth year when he passed away ! Liberation then was not incompatible with activity in the life of the founder himself.

As he clearly pointed out once, there are two kinds of action, one that is done under the influence of attachment, hatred, infatuation (*rāga, dveṣa, moha*), another that is done without these. Work without attachment, hatred and infatuation does not cause bondage.

It is only the first that strengthens our desire to cling to the world and generates the seeds of karma causing rebirth. The second kind of action, done with perfect insight into the real nature of the universe and without attachment, does not create a karma producing rebirth. The difference between the two kinds of karma, Buddha points out, is like that between the sowing of ordinary productive seeds and the sowing of seeds which have been fried and made barren.¹ This lesson is further taught when he points out, in telling the story of his enlightenment,² that after he had attained *nirvāṇa*, he was at first seized with a temporary reluctance to work for the deliverance of others ; but he shook this off when he

¹ *Aṅguttara-nikāya* (Warren, pp. 215 f.).

² *Majjhima-nikāya*, 26 (*ibid.*, pp. 339 f.).

perceived that it would be shirking duty. His enlightened heart then beat with sympathy for the countless beings who were still writhing in pain. He

Buddha set the example of such selfless service of fellow beings.

and not allowed to perish.¹ Nirvāṇa, he thus shows by his own example and precept, does not require the Arhat to shun activity; on the contrary, love and sympathy for all beings increase with enlightenment and persuade the perfect man to share his wisdom with them and work for their moral uplift.

If this be a correct interpretation of Buddha's life and teaching, then it is wrong to think, as it is very often done, that nirvāṇa means total extinction of existence. The etymological meaning of 'nirvāṇa'

is 'blown out.' The metaphor of a 'blown out light' ■ there; and the liberated one is sometimes compared to it. Depending on such etymological meaning and the negative description of nirvāṇa as the absence of all physical and mental states known to us, some interpreters of Buddhism—Buddhists and non-Buddhists—have explained nirvāṇa as complete cessation of existence. But against this view we have to remember, first, that if nirvāṇa or liberation be extinction of all existence, then Buddha cannot be said to have been liberated till he died; his attainment of

perfect wisdom and freedom, for which we have his own words, turns then into a myth. It is difficult to hold, therefore, that nirvāṇa as taught by Buddha means cessation of all existence.² Secondly, we are to remember that, though nirvāṇa, according to Buddha, stops rebirth and, therefore, means the extinction of all misery and of the conditions that cause future existence in this world after death, it does not

¹ *Majjhima-nikāya* (vide Silācāra's trans. p. 170).

² Rhys Davids shows that the Pali word for 'liberated,' 'Purinibbuto,' is used of living persons and scarcely of dead Arhants. (*Vide Dialogues*, II, p. 132, f.n.)

mean necessarily that after death the liberated saint does not continue in any form. This last point, as we mentioned previously, is one of the

Buddha's silence about the condition of the liberated after death does not mean his denial of the existence of such a person after death.

So that even the view that, after death, the person who attains nirvāṇa ceases to exist altogether is one which Buddha cannot be said to have held. Buddha's silence might just mean that the state of liberation cannot be described in terms of ordinary experience.¹

The important question that arises here then is: If Buddha is not explicit about the fate of a liberated person after death, what according to him is gained by

The double gain of nirvāṇa: stopping of rebirth and future misery, and attainment of perfect peace in this life.

nirvāṇa? The gain is double, negative and positive. Nirvāṇa is a guarantee that rebirth, whose conditions have been destroyed, will not occur. Nirvāṇa also positively means that one who has attained it enjoys perfect peace even in this life so long as he lives after enlightenment. This peace is not, of course, like any of the pleasures born of the fulfilment of desires. It is, therefore, said to be beyond worldly pleasures and pains. But it is a state of serenity, equanimity and passionless self-possession. It cannot be described in terms of ordinary experiences; the best way of understanding it in the light of our imperfect experience is to think of it as a relief from all painful experience from which we suffer. We can understand this because all of us have experience at least of temporary feelings of relief from some pain or

Even the partial fulfilment of the conditions of nirvāṇa causes palpable benefits.

other, such as freedom from disease, debt, slavery imprisonment.² Besides, the advantages of nirvāṇa can be enjoyed in part, even before it has been obtained, by the partial fulfilment of its conditions. As Buddha explains to King Ajātasatru in a discourse on the advantages of the life of a recluse, every bit of ignorance removed, and passion conquered, brings about palpable benefit, such

¹ Vide Prof. Radhakrishnan's article. 'The teaching of Buddha by speech and silence,' *Hibbert Journal*, April, 1934.

² Vide *Sāmañña-phala-sutta* (*Dialogues*, I, p. 84).

as purity, good-will, self-possession, courage, unperplexed mind, unruffled temper.¹ This heartens him and gives him the strength to pursue the difficult goal of nirvāṇa till it is fully obtained.

We know that a later Buddhist teacher of great eminence, Nāgasena, while instructing the Greek King Menander (Milinda) who accepted his discipleship, tried to convey to him the idea of the blissful character of nirvāṇa with a series of metaphors: Nirvāṇa is profound like an ocean, lofty like a mountain peak, sweet like honey, etc.² But all these, as Nāgasena points out, can scarcely convey to the imperfect man the idea of what that thing is. Reasoning and metaphor are of little avail for convincing a blind man what colour is like.

5. *The Fourth Noble Truth about the Path to Liberation*

The fourth noble truth, as seen already, lays down that there is a path (mārga)—which Buddha followed and others can similarly follow—to reach a state free from misery. Clues regarding this path are derived from the knowledge of the chief conditions that cause misery. The path recommended by Buddha consists of eight steps or rules and is, therefore, called the eightfold noble path.³ This gives in a nutshell the essentials of Bauddha Ethics. This path is open to all, monks as well as laymen.⁴ The noble path consists in the acquisition of the following eight good things:

Right views (sammāditthi or samyagdr̥ṣṭi).—As ignorance, with its consequences, namely, wrong

¹ Ibid.

² Vide *Milinda-poṭha*.

³ Full discussion occurs in *Digha-nikāya-sutta*, 22 (Warren, pp. 872-74), *Majjhima-nikāya* (quoted by Sogen, *Systems*, pp. 169-71).

⁴ Vide Rhys Davids, *Dialogues*, I, pp. 62-63.

views (*mīthyādr̥ṣṭi*) about the self and the world,

(1) Right views, or knowledge of the four noble truths. is the root cause of our sufferings, it is natural that the first step

to moral reformation must be the acquisition of right views or the knowledge of truth. Right view is defined as the correct knowledge about the four noble truths. It is the knowledge of these truths alone, and not any theoretical speculation regarding nature and self, which, according to Buddha, helps moral reformation, and leads us towards the goal—*nirvāṇa*.

Right resolve (*sammāsaṅkappa* or *samyaksaṅkalpa*).

—A mere knowledge of the truths would be useless

unless one resolves to reform life in their light. The moral aspirant is asked, therefore, to renounce worldli-

ness (or attachment to the world), to give up ill-feeling towards others and desist from doing any harm to them. These three constitute the contents of right determination.

Right speech (*sammāvācā* or *samyagvāk*).—

Right determination should not remain a mere 'pious wish' but must issue forth

(3) Right speech, or control of speech. into action. Right determination should be able to guide and control

our speech, to begin with. The result would be right speech consisting in abstention from lying, slander, unkind words and frivolous talk.

Right conduct (*sammākammanta* or *samyak-karmānta*).—Right determination

(4) Right conduct, or abstention from wrong action. should end in right action or good conduct and not stop merely with good speech. Right conduct consists, therefore, in

desisting from destroying life, from stealing and from improper gratification of the senses.

Right livelihood (sammā-ājīva or samyagājīva).—Renouncing bad speech and bad actions, one should earn his livelihood by honest means.

(5) Right livelihood, or maintaining life by honest means.

The necessity of this rule lies in showing that even for the sake of maintaining one's life, one should not take to forbidden means but work in consistency with good determination.

Right effort (sammāvāyāma or samyagvyāyāma).—While a person tries to live a reformed life, through

(6) Right effort, or constant endeavour to maintain moral progress by banishing evil thoughts and entertaining good ones.

right views, resolution, speech, action and livelihood, he is constantly knocked off the right path by old evil ideas which were deep-rooted in the mind as also fresh ones which constantly arise. One cannot progress steadily unless he maintains a constant effort to root out old evil thoughts, and prevent evil thoughts from arising anew. Moreover, as the mind cannot be kept empty, he should constantly endeavour also to fill the mind with good ideas, and retain such ideas in the mind. These fourfold constant endeavour, negative and positive, is called right effort. This rule points out that even one high up on the path cannot afford to take a moral holiday without running the risk of slipping down.

Right mindfulness (sammāsati or samyaksmṛti).—

(7) Right mindfulness or constant remembrance of the perishable nature of things.

The necessity of constant vigilance is further stressed in this rule, which lays down that the aspirant should constantly bear in mind the things he has already learnt. He should constantly re-

member and contemplate the body as body, sensations as sensations, mind as mind, mental states as mental states. About any of these he should not think, "This am I," or "This is mine."¹ This advice sounds no better than asking one to think of a spade as a spade.

This is necessary for keeping off attachment to things, and grief over their loss.

But ludicrously superfluous as it might appear to be, it is not easy to remember always what things really are. It is all the more difficult to practise it when false ideas about the body, etc., have become so deep-rooted in us and our behaviours based on these false notions have become instinctive. If we are not mindful, we behave as though the body, the mind, sensations and mental states are permanent and valuable. Hence arise attachment to them and grief over their loss, and we become subject to bondage and misery. But contemplation on the frail, perishable, loathsome nature of these helps us to remain free from attachment and grief. This is the necessity of constant mindfulness about truth.

In *Digha-nikāya*, sutta 22, Buddha gives very detailed

The practice of such thought is recommended by Buddha in minute details in *Digha-nikāya*.

instructions as to how such contemplation is to be practised. For example, regarding the body, one should remember and contemplate that the body is only a combination of the four elements (earth, water, fire, air), that it is filled with all sorts of loathsome matter, flesh, bone, skin, entrails, dirt, bile, phlegm, blood, pus, etc. Going to a cemetery one should observe further how the dead body rots, decays, is eaten by dogs and vultures and afterwards gradually becomes reduced to and mixed up with the

¹ Vide *Majjhima-nikāya*, I, p. 171 (E. T. by Sīlācāra, German Pāli Society).

elements. By such intense contemplation he is able to remember what the body really is: how loathsome, how perishable, how transitory! 'He gives up all false emotions and affection for the body, his own and others'. By similar intense contemplation about sensation, mind and harmful mental states he becomes free from attachment and grief regarding all these. The net result of this fourfold intense contemplation is detachment from all objects that bind man to the world.¹

Right concentration (*sammāsamādhi* or *samyak-samādhi*).—One who has successfully guided his life in

(8) Right concentration, through four stages, is the last step in the path that leads to the goal—*nirvāṇa*.

the light of the last seven rules and thereby freed himself from all passions and evil thoughts is fit to enter step by step into the four deeper and deeper stages of concentration that gradually take him to the goal of his long and arduous journey—cessation of suffering. He concentrates his pure and unruffled mind on reasoning (*vitarka*) and investigation (*vicāra*) regarding the

(a) The first stage of concentration is on reasoning and investigation regarding the truths. There is then a joy of pure thinking.

truths, and enjoys in this state joy and ease born of detachment and pure thought. This is the first stage of intent meditation (*dhyāna* or *jhāna*).

When this concentration is successful, belief in the

(b) The second stage of concentration is unruffled meditation, free from reasoning, etc. There is then a joy of tranquillity.

fourfold truth arises dispelling all doubts and, therefore, making reasoning and investigation unnecessary. From this results the second stage of concentration, in which there are joy, peace and internal tranquillity

¹ *Vide Warren, Buddhism in Trans., p. 364.*

born of intense, unruffled contemplation. There is in this stage a consciousness of this joy and peace too.

In the next stage attempt is made by him to initiate an attitude of indifference, to be able to detach himself even from the joy of concentration. From this results the third deeper kind of concentration, in which one experiences perfect equanimity, coupled with an experience of bodily ease. He is yet conscious of this ease and equanimity, though indifferent to the joy of concentration.

(c) The third stage of concentration is detachment from even the joy of tranquillity. There is then indifference even to such joy, but a feeling of bodily ease still persists.

(d) The fourth stage of concentration is detachment from this bodily ease too. There are then perfect equanimity and indifference. This is the state of nirvāṇa or perfect wisdom.

Lastly, he tries to put away even this consciousness of ease and equanimity and all the sense of joy and elation he previously had. He attains thereby the fourth state of concentration, a state of perfect equanimity, indifference and self-possession—without pain, without ease. Thus he attains the desired goal of cessation of all suffering, he attains to arhatship or nirvāṇa.¹ There are then perfect wisdom (prajñā) and perfect righteousness (śīla).

To sum up the essential points of the eightfold path (or, what is the same, Buddha's ethical teachings), it may be noted first that the path consists of three main things—knowledge, conduct and concentration, harmoniously cultivated. In

Knowledge, conduct and concentration form the essentials of the path.

¹ Vide *Paṭṭhapāda-sutta*, for the detailed treatment of the Jhānas (*Dialogues*, I, pp. 245 f.).

Indian philosophy knowledge and morality are thought inseparable—not simply because morality, or doing of good, depends on the knowledge of what is good, about

Perfect knowledge is impossible without morality.

which all philosophers would agree, but also because perfection of knowledge is regarded as impossible without morality, the voluntary control of passions and prejudices. Buddha explicitly states in one of his

"Virtue and wisdom purify one another," says Buddha.

discourses that virtue and wisdom purify one another and the two are inseparable.¹ In the eightfold path one starts with 'right views'—a mere intellectual apprehension of the fourfold truth. The mind is not

Reformation of life—ideas, will and emotion—in the light of truth forms a major part of the eightfold path.

yet purged of the previous wrong ideas and the passions or wrong emotions arising therefrom; moreover, old habits of thinking, speaking and acting also continue still. In a word, conflicting forces—the new good ones and the old bad ones—create, in terms of modern psychology, a divided personality. The seven steps beginning with right resolve furnish a continuous discipline for resolving this conflict by reform of the old personality. Repeated contemplation of what is true and good, training of the will and emotion accordingly, through steadfast determination and passionless behaviour, gradually achieve the harmonious personality in which thought and will and emotion are all thoroughly cultured and purified in the light of truth. The last step of perfect concentration is thus made possible by

¹ *Sopadanda-sutta* (*ibid.*, p. 156).

the removal of all obstacles. The result of this unhampered concentration on truth is perfect insight or wisdom, to which the riddle of existence stands clearly revealed once for all. Ignorance and desire are cut at their roots and the source of misery vanishes. Perfect wisdom, perfect goodness and perfect equanimity—complete relief from suffering—are simultaneously attained, therefore, in nirvāṇa. "Goodness is a function of intelligence," said Matthew Bassendine,¹ "as beauty is of health." In Buddha's view, goodness, wisdom and tranquillity are the joint and inseparable functions of the complex fact of nirvāṇa.

6. *The Philosophical Implications of Buddha's Ethical Teachings*

We may discuss here briefly some of the more important ideas of the world and man underlying Buddha's ethical teachings. Some of these are explicitly stated by Buddha himself. We shall mention four of these views, on which his ethics mainly depends, namely, (1) the theory of dependent origination, (2) the theory of karma, (3) the theory of change, and (4) the theory of the non-existence of the soul.

(i) *The Theory of Dependent Origination or Conditional Existence of Things*

There is a spontaneous and universal law of causation which conditions the appearance of all events, mental and physical. This law (dharma or

Everything depends on some condition.

¹ Vide Rhys Davids, *Dialogues*, I, p. 137.

dharmas) works automatically without the help of any conscious guide. In accordance with it, whenever a particular event (the cause) appears, it is followed by another particular event (the effect). 'On getting the cause, the effect arises.' The existence of *everything* is *conditional*, dependent on a cause. Nothing happens fortuitously or by chance. This is called the theory of dependent origination (*Pratītyasamutpāda* in Sanskrit and *Paṭiccasamuppāda* in Pāli).¹ This view, as Buddha himself makes clear, avoids two extreme views: on the one hand, eternalism

Nothing exists without a cause, nor does it perish without leaving some effect.

This is the middle view avoiding the two extremes of eternalism and nihilism.

or the theory that some reality eternally exists independently of any condition and, on the other hand, nihilism or the theory that something existing can be annihilated or can cease to be. Buddha claims, therefore, to hold the middle view,² namely, that everything that we perceive possesses an existence but is dependent on something else, and that thing in turn does not perish without leaving some effect.

Buddha attaches so much importance to the understanding of this theory that he calls this the Dhamma. "Let us put aside questions of the Beginning and the End," he says, "I will teach you the Dhamma: That being thus, this comes to

¹ *Vissuddhimagga*, Chap. xvii (Warren, pp. 169 f.). Etymologically, *pratītya* = getting (something), *samutpāda* = origination (of something else).

² *Saṃyutta-nikāya*, xxi (ibid., p. 165).

be. From the coming to be of that, this arises. That being absent, this does not happen. From the cessation of that, this ceases." "He who sees the paṭicca-samuppāda sees the Dhamma, and he who sees the Dhamma, sees the paṭiccasamuppāda." It is again compared to a staircase, by mounting which one can look round on the world and see it with the eye of a Buddha.¹ It is the failure to grasp this standpoint which, Buddha asserts, is the cause of all our trouble.² Later Buddhism, as Rhys

The failure to grasp this principle of causation is the cause of all troubles.

Davidson notes, does not pay much heed to this theory. But Buddha himself says that this theory is very profound.³ We have seen already how this theory is applied to the solution of the question regarding the origin of misery, as well as to that regarding the removal of misery. We shall see just now how profound in its many-sided implications this theory is in some other respects as well.

(ii) The Theory of Karma

The belief in the theory of karma, it will be seen, is only an aspect of this doctrine.

The law of karma is an aspect of this principle of causation.

The present existence of an individual is, according to this doctrine, as according to that of karma, the effect of its past; and its future would be the effect of its present

¹ *Dialogues*, II, p. 44.

² *Mahānidāna-sutta* (Warren, p. 203).

³ *Ibid.*

existence. This has been seen very clearly already in connection with the explanation of the origin of suffering in the light of the theory of dependent origination. The law of karma is only a special form of the more general law of causation as conceived by Buddha.

(iii) The Doctrine of Universal Change and Impermanence

The doctrine of dependent origination also yields the Buddhist theory of the transitory nature of things. All things, Buddha repeatedly teaches, are subject to change and decay. As everything originates from some condition, it disappears when the condition ceases to be. Whatever has a beginning has also an end. Buddha, therefore, says, "Know that whatever exists arises from causes and conditions and is in every respect impermanent."¹ "That which seems ever-lasting will perish, that which is high will be laid low; where meeting is, parting will be; where birth is, death will come."²

Transitoriness of life and worldly things is spoken of by many other poets and philosophers. Buddha logically perfects this view into the doctrine of impermanence. His later followers develop this further into a theory of *momentariness*, which means not only that everything has conditional and, therefore, non-permanent existence, but also that things last not even for short periods of time, but exist for one partless moment only. This doctrine

Subsequent Buddha thinkers further develop the theory of impermanence into that of momentariness.

¹ *Mahāparinirvāṇa-sūtra* (quoted in Sogen's *Systems*, p. 9).

² *Dhammapadam* (*ibid.*).

of momentariness of all things is supported by later writers with elaborate arguments, one of which may be briefly noticed here: The criterion of the existence

This view is deduced from the criterion of existence as causal efficiency.

(sattā) of a thing is its capacity to produce some effect (artha-kriyā-kāritva-lakṣaṇam sat). A non-existent thing, like a hare's horn, cannot produce any effect. Now, from this criterion of existence, it may be deduced that a thing having existence must be momentary. If, for example, a thing like a seed be not accepted to be momentary, but thought to be lasting for more than one moment, then we have to show that it is capable of producing an effect during each moment it exists. Again, if it really remains the same unchanging thing during these moments, then it should be able to produce the same effect at every one of those moments. But we find that this is not the case. The seed in the house does not produce the seedling which is generated by a seed sown in the field. The seed in the house cannot then be the same as that in the field. But it may be said that though the seed does not actually produce the same effect always, it always has the potentiality to produce it, and this potentiality becomes kinetic in the presence of suitable auxiliary conditions like earth, water, etc. Therefore, the seed is always the same. But this defence is weak; because then it is virtually confessed that the seed of the first moment is not the cause of the seedling, but that the seed modified by the other conditions really causes the effect. Hence the seed must be admitted to have changed. In this way it may be shown regarding everything that it does not stay unchanged during any two moments, because it does not produce the identical effect during both moments. Hence everything lasts only for a moment.

(40) The Theory of the Non-existence of the Soul

The law of change is universal; neither man, nor any other being, animate or inanimate, is exempt from

it. It is commonly believed that in man there is an

The common belief is that there is a permanent substance in man, namely, the soul. But this belief is untenable, because of the law of universal change and impermanence.

abiding substance called the soul (ātmā), which persists through changes that overcome the body, exists before birth and after death, and migrates from one body to another. Consistently with his

theories of conditional existence and universal change, Buddha denies the existence of such soul. But how, it may be asked, does he then explain the continuity of a person through different births, or even through the different states of childhood, youth and old age? Though denying the continuity of an identical substance in man, Buddha does not deny the continuity of the stream of successive states that compose his life. Life is an unbroken series of states; each of these states depends on the condition just preceding and gives rise to the

Life is an unbroken stream of successive states which are causally connected.

one just succeeding it. The continuity of the life-series is, therefore, based on a causal connection run-

ning through the different states. This continuity is often explained with the example of a lamp burning throughout the night. The flame of each moment is dependent on its own conditions and different from that of another moment which is dependent on other conditions. Yet there is an unbroken succession of the different flames. Again, as from one flame

This stream extends backward and forward and makes the past, present and future lives continuous.

another may be lighted, and though the two are different, they are connected causally, similarly, the end-state of this life may cause the beginning of the next. Rebirth is, therefore, not transmigration, i.e. the migration of the same soul

into another body ; it is the causation of the next life by the present.¹ The conception of a soul is thus

The soul is thus replaced by a continuous stream of states. replaced here by that of an unbroken stream of consciousness as in the philosophy of William

James. As the present state of consciousness inherits its characters from the previous one, the past in a way continues in the present, through its effect. Memory thus becomes explicable even without a soul. This theory of the non-existence of soul (*Anattā-vāda*) plays a very important part in understanding the teachings of Buddha. He, therefore, repeatedly exhorts his disciples to give up the false view about the self. Buddha points out that people

The illusion of a permanent soul causes attachment and misery.

who suffer from the illusion of the self, do not know its nature clearly ; still they strongly protest that they love the soul ; they want

to make the soul happy by obtaining salvation. This, he wittily remarks, is like falling in love with the most beautiful maiden in the land though she has never been seen nor known.² Or, it is like building a staircase for mounting a place which has never been seen.³

Man is only a conventional name for a collection

Man is an unstable collection of body, manas and consciousness.

of different constituents,⁴ the material body (*kāya*), the immaterial mind (*manas* or *citta*), the formless

¹ *Vide* Warren, pp. 234 f.

³ *Ibid.*, p. 261.

⁴ *Ibid.*, pp. 259-61.

consciousness (*vijñāna*), just as a chariot is a collection of wheels, axles, shafts, etc.¹ The existence of man depends on this collection and it dissolves when the collection breaks up. The soul or the ego denotes nothing more than this collection. From

Man may also be regarded as a combination of five kinds of changing states—*pañca-skandhas*.

a psychological point of view, man, as perceived from without and within, is analysable also into a collection of five groups (*pañca-skandha*) of changing elements, namely, (1) form (*rūpa*) consisting of the different factors which we perceive in this body having form, (2) feelings (*vedanā*) of pleasure, pain and indifference, (3) perception (*sañjñā*), (4) predispositions or tendencies generated by the impressions of past experience (*samskāras*), and (5) consciousness itself (*vijñāna*).²

In summing up his teachings, Buddha himself once said: "Both in the past and even now do I set forth just this: suffering (*duḥkha*) and cessation of suffering." Rhys Davids, quoting this authority, observes that the theory of dependent origination (in its double aspect of explaining the world and explaining the origin of suffering), together with the formula of the eightfold path, gives us "not only the whole of early Buddhism in a nutshell, but also just those points concerning which we find the most emphatic affirmations of Dhamma as Dhamma ascribed to

The essence of Buddha's teachings: suffering and cessation of suffering.

Gautama."¹ And this is the substance of what we have learnt in the above account of Buddha's teachings.

III. THE SCHOOLS OF BAUDDHA PHILOSOPHY

It has been found again and again in the history of human thought that every reasoned attempt to avoid philosophy lands a thinker into a new kind of philosophy. In spite of Buddha's aversion to theoretical speculation, he never wanted to accept, nor did he encourage his followers to accept, any course of action without reasoning and criticism. He was extremely rational and contemplative, and wanted to penetrate into the very roots of human existence, and tried to supply the full justification of the ethical principles he followed and taught. It was no wonder, therefore, that he himself incidentally laid down the foundation of a philosophical system. His philosophy, partly expressed and partly implicit, may be called positivism in so far as he taught that our thoughts should be confined to this world and to the improvement of our existence here. It may be called phenomenism in so far as he taught that we were sure only of the phenomena we experienced. It is, therefore, a kind of empiricism in method because experience, according to him, was the source of knowledge.

Buddha's attempt to avoid metaphysics gives rise to a new kind of metaphysics.

His teachings contained the germs of positivism, phenomenism and empiricism.

¹ *Dialogues*, II, p. 44.

These different aspects of his philosophy came to be developed by his followers along

These are developed by his diverse followers along different lines.

different lines, as they were required to justify Buddha's teaching, to defend it from the severe criticism it had to face in India and outside, and to convert other thinkers to their faith. Buddha's reluctance to discuss the ten metaphysical questions concerning things beyond our experience and his silence about them came to be interpreted by his followers in different lights. Some took this attitude as only the sign of a thoroughgoing empiricism which must frankly admit the inability of the mind to decide non-empirical questions. According to this explanation, Buddha's attitude would be

Empiricism and scepticism.

regarded as scepticism. Some other followers, mostly the Mahāyānists, interpreted Buddha's view neither as a denial of reality beyond objects of ordinary experience, nor as a denial of any means of knowing the non-empirical reality, but only as signifying the indescribability of that transcendental experience and reality. The justification of this last interpretation can be obtained from some facts of Buddha's life and teachings. Ordinary empiricists believe that our sense-experience is the only basis of all our knowledge; they do not admit the possibility of any non-sensuous experience. Buddha, however, taught the possibility of man's attaining in nirvāṇa an experi-

Mysticism and transcendentalism.

ence or consciousness which was not generated by the activity of the senses. The supreme value and importance that he attached to this non-empirical

consciousness, justify his followers in supposing that he regarded this as the supreme reality, as well. The fact that very often Buddha used to say¹ that he had a profound experience of things 'far beyond,' which is 'comprehended only by the wise' and 'not grasped by mere logic,' may be taken to mean that his non-empirical experience can neither be logically proved with arguments nor be expressed in empirical ideas and language. These grounds lead some followers, as we shall see, to raise a philosophy of mysticism and transcendentalism out of the very silence of Buddha. The nemesis of neglected metaphysics thus overtakes Buddhism soon after the founder's passing away.

Buddhism, though primarily an ethical-religious movement, thus came to give birth to about thirty schools, not counting the minor ones.² And some of these get into the deep waters of metaphysical speculation, heedless of the founder's warning. Of these many schools of Buddhist thought we shall first notice the four well-known systems as discussed generally by Indian writers. According to this account, (1) some Buddha philosophers are nihilists (*Sūnya-vādi* or *Mādhyamika*), (2) others are subjective idealists (*Vijñāna-vādi* or *Yogācāra*), (3) others again are representationists or critical realists (*Bāhyānumeya-vādi* or *Sautrāntika*), and (4) the rest are direct realists (*Bāhya-pratyakṣa-vādi* or *Vaibhāṣika*). The first two of the

There are about thirty chief schools of later Buddhism.

Four schools of Buddha philosophy distinguished by Indian critics of Buddhism.

² Vide Sogen, *Systems*, p. 3.

above four schools come under Mahāyāna and the last two under Hīnayāna. It should be noted, however, that under both Mahāyāna and Hīnayāna there are many other schools.¹

The fourfold classification of Bauddha philosophy is based upon two chief questions,

This fourfold division is based on two problems: (1) Is there any reality? Three replies to this question.

one metaphysical or concerning reality and the other epistemological or concerning the knowing of reality. To the metaphysical

question "Is there at all any reality, mental or non-mental?" three different replies are given: (a) The Mādhyamikas hold² that there is no reality, mental or non-mental; that all is void (śūnya). Therefore, they have been known as the nihilists (śūnya-vādins). (b) The Yogācāras hold that only the mental is real, the non-mental or the material world is all void of reality. They are, therefore, called subjective idealists (vijñāna-vādins). (c) Still another class of Bauddhas hold that both the mental and the non-mental are real. They may, therefore, be called realists. Sometimes they are styled Sarvāstivāda-vādins (*i.e.* those who hold the reality of all things), though this term is used in a little different sense by some Buddhist writers. But when the further

(2) How is external reality known? Two replies to this question.

epistemological question is asked: "How is external reality known to exist?" this third group of thinkers, who believe in external reality, give two

¹ Ibid. Bogen mentions 21 schools of Hīnayāna and eight of Mahāyāna, which are said to have many more or less known schools.

² According to non-Buddhist Indian critics. This interpretation is not supported by the Mahāyānist writers, as will be shown later.

different answers. Some of them, called Sautrāntikas, hold that external objects are not perceived but known by inference. Others, known as Vaibhāṣikas, hold that the external world is directly perceived. Thus we have the four schools, representing the four important standpoints. This classification has much philosophical importance, even in the light of contemporary Western thought, where we find some of these different views advocated with great force. Let us consider these four schools.

1. *The Mādhyamika School of Sūnya-vāda*

The founder of this school is said to be Nāgārjuna, who was a Brahmin born in South India about the second century A.D.¹ Nāgārjuna, the founder of this school of Sūnya-vāda, Aśvaghōṣa, the author of *Buddhacarita*, is also regarded as its pioneer. In his famous work, *Mādhyamikaśāstra*, Nāgārjuna states, with great dialectical skill and scholarship, the philosophy of the Mādhyamika school.

The doctrine of Sūnyavāda has been understood in India, by non-Buddhist philosophers in general, to mean that the universe is totally devoid of reality, that everything is sūnya or void. In setting forth this doctrine in his *Sarvadarśana-saṅgraha*, Mādhavācārya has mentioned the following as an argument in its support. The self (or the knower), the object (or the known) and knowledge are mutually interdependent. The reality of

Sūnya-vāda is understood as nihilism by Indian writers.

A proof of nihilism or the unreality of all things : objects, knowledge and knower.

¹ Vide Sogen, *Systems*, Chap. V, p. 187.

one depends on each of the other two, and if one be false, the others also must be so (just as the fatherhood of any person will be proved false if the existence of his children be proved to be false). But it must be admitted by all that when we perceive a snake, in a rope, the object perceived, namely, the snake is absolutely false. Hence the mind or the subject which knows such an object turns out to be false and all knowledge also becomes false. Thus it may be concluded that all that we perceive within or without, along with their perception and the perceiving mind, are illusory like dream-objects. There is, therefore, nothing, mental or non-mental, which is real. The universe is *sūnya* or void of reality.

From such arguments it would appear that, according to the Mādhyamika view, everything is unreal. Hence it is that such a view came to be known as nihilism in Europe as well as in India (where it has also been termed *Sarva-vaināśika-vāda* by some writers). The word *sūnya*, used by the Mādhyamikas themselves, is chiefly responsible for this notion—because *sūnya* means ordinarily void or empty. But when we study this philosophy more closely, we come to realize that the Mādhyamika view is not really nihilism, as ordinarily supposed, and that it does not deny all reality, but only the apparent phenomenal world perceived by us. Behind this phenomenal world there is a reality which is not describable by any character, mental or non-mental, that we perceive. Being devoid of phenomenal characters, it is called *sūnya*. But this is only the

sūnya-vāda really denies only the phenomenal world, and not all reality.

negative aspect of the ultimate reality ; it is only a description of what it is not. In the *Laṅkāvatāra-sūtra* (quoted by Mādhavācārya himself) it is stated that the real nature of objects cannot be ascertained by the intellect and cannot, therefore, be described. That which is real must be independent and should not

Sūnya means the indescribable nature of phenomena.

A thing cannot be said to be either real or unreal, or both real and unreal, or neither real nor unreal. depend on anything else for its existence and origination. But every thing we know of is dependent on some condition. Hence it cannot be real. Again, it cannot be said to be unreal. Because an unreal thing, like a castle in the air, can never come into existence. To say that it is both real and unreal, or that it is neither real nor unreal, would be unintelligible jargon.¹ Sūnyatā or voidness is the

Sūnyatā is this indeterminate nature.

name for this indeterminable, indescribable real nature of things. Things appear to exist, but when we try to understand the real nature of their existence our intellect is baffled. It cannot be called either real or unreal, or both real and unreal, or neither real nor unreal.

It will be seen that in the above argument, the indescribable nature of things is deduced from the fact of their being dependent on other things or conditions. Nāgārjuna says, therefore, "The fact of dependent origination is called by us sūnyatā."² "There is no dharma (character) of things which is not dependent on some other condition regarding

Sūnyatā is only an aspect of the dependent nature of things.

¹ *Sarvadarśana-saṅgraha*, Chap. II.

² *Mādhvamika-sūtra*, Chap. 24, Kārikā 18.

its origin. Therefore, there is no dharma which is not *sūnya*.¹ It would appear, therefore, that *sūnya* only means the conditional character of things, and their consequent constant changeability and indeterminability or indescribability.²

This view is called the middle (*madhyama*) path,

This view avoids the two extreme views of the absolute reality and the absolute unreality of things. Hence it is known as the middle (*madhyama*) view.

because it avoids extreme views by denying, for example, both absolute reality and absolute unreality of things and asserting their conditional existence. This was the reason why Buddha, as we saw, called the theory of dependent origination—the middle path.³ And so Nāgārjuna says⁴ that

sūnya-vāda is called the middle path because it implies the theory of dependent origination.

The conditionality of things which makes their own

sūnyavāda is a kind of relativity.

nature (*svabhāva*) unascertainable, either as real or unreal, etc., may be also regarded as a kind of relativity. Every character of a thing is condi-

tioned by something else and, therefore, its existence is relative to that condition. *Sūnyavāda* can, therefore, also be interpreted as a theory of relativity which declares that no thing, no phenomenon experienced, has a fixed, absolute, independent character of its own (*svabhāva*) and, therefore, no description of any phenomenon can be said to be unconditionally true.

To this philosophy of phenomena (or things as they

The positive side of the *Mādhyamika* doctrine: there is a reality behind phenomena; it is unconditional and free from change.

appear to us), the *Mādhyamikas* add a philosophy of noumenon (or reality in itself). Buddha's teachings regarding dependent origination, impermanence, etc., apply, they hold, only to the phenomenal world, to things commonly observed by us in ordinary experience.

But when *nirvāṇa* is attained and the conditions of sense-experience and the appearance of phenomena are controlled, what would be the nature of the resultant experience? To

¹ *Ibid.*, *Kārikā* 10.

² Sogen, *Systems*, p. 14 and pp. 191-98; Suzuki, *Outlines*.

³ *Vide ante*.

⁴ *Kārikā* 18 quoted above.

this we cannot apply the conditional characters true of phenomena. The *Mādhyamikas*, therefore, hold that there is a transcendental reality (noumenon) behind the phenomenal one and it is free from change, conditionality and all other phenomenal characters. As Nāgārjuna says: "There

Nāgārjuna speaks, therefore, of two truths, empirical or phenomenal and transcendental or noumenal.

are two truths, on which Buddha's teaching of Dharma depends, one is empirical (*saṃvṛti-satya*) and meant for the ordinary people, another is the transcendental or the absolutely true one (*paramārtha-satya*). Those who do not know the distinction between these two kinds of truth, cannot understand the profound mystery of Buddha's teachings." ¹

The truth of the lower order is only a stepping-stone to the attainment of the higher. The nature of nirvāṇa-experience which takes one beyond ordinary experience cannot be described, it can only be suggested negatively with the help of words which describe our common experience. Nāgārjuna, therefore, describes nirvāṇa with a series of negatives, thus: "That which is not known (ordinarily), not acquired anew, not destroyed, not eternal, not suppressed, not generated is called nirvāṇa." ²

No positive description of it is possible. As with nirvāṇa so also with the Tathāgata or one who has realized nirvāṇa. His nature also cannot be described. That is why, when Buddha was asked what becomes of the Tathāgata after nirvāṇa is attained, he declined to discuss the question.

In the same light the silence of Buddha regarding all metaphysical questions about non-empirical things can be interpreted to mean that he believed in a transcendental experience and reality, the truths about which cannot be described in terms of common experience. Buddha's frequent statements that he had realized some

¹ *Mādhyamika-kāstra*, Chap. 24, *Kārikā* 8-9.

² *Ibid.*, Chap. 25, *Kārikā* 3.

profound truth which reasoning cannot grasp, can be cited also to support this Mādhyamika contention about the transcendental.¹

It may be noted here that in its conception of twofold truth, its denial of the phenomenal world, its negative description of the transcendental, and its conception of nirvāṇa as the attainment of unity with the transcendental self, the Mādhyamika approaches very close to Advaita Vedānta as taught in some Upaniṣads and elaborated later by Śaṅkarācārya.

The points of agreement between Buddha's teaching (as interpreted by the Mādhyamikas) and that of the Upaniṣads.

2. *The Yogācāra School of Subjective Idealism*

While agreeing with the Mādhyamikas, as to the unreality of external objects, the Yogācāra school differs from them in holding that the mind (citta) cannot be regarded as unreal. For then all reasoning and thinking would be false and the Mādhyamikas cannot establish that even their own arguments are correct. To say that everything mental or non-mental is unreal is suicidal. The reality of the mind must, therefore, be admitted. The mind should at least be admitted in order to make correct thinking possible.

The mind, consisting of a stream of different kinds of ideas, is the only reality. Things that appear to be outside the mind, our body as well as other objects, are merely ideas of the mind. Just as in cases of dreams and hallucinations a man fancies to perceive

Denial of the reality of the mental is self-contradictory.

The objects perceived are all ideas in the mind.

¹ Vide Prof. Radhakrishnan's article, "The teaching of Buddha by speech and silence," *Hibbert Journal*, April, 1934, for a fuller discussion.

things outside, though they do not really exist there, similarly the objects which appear to be out there, are really ideas in the mind. The existence of any external object cannot be proved, because it cannot be shown that the object is different from the consciousness of the object. As Dharmakīrti states, the blue colour and the consciousness of the blue colour are identical, because they are never perceived to exist separately. Though really one, they appear as two due to illusion, just as the moon appears as two to some due to defective vision. As an object is never known without the consciousness of it, the object cannot be proved to have an existence independent of consciousness.

The Yogācāras also point out the following absurdities which arise on the admission of an object external to the mind. An external object, if admitted, must be either partless (i.e. atomic) or composite (i.e. composed of many parts). But atoms are too small to be perceived. A composite thing (like a pot) also cannot be perceived, because it is not possible to perceive simultaneously all the sides and parts of the whole object. Nor can it be said to be perceived part by part, because, if those parts are atomic, they are too small to be perceived, and if they are composite, then the original objection again arises. So if one admits extra-mental objects, the perception of these objects cannot be explained. These objections do not arise if the object be nothing other than consciousness, because the question of parts and whole does not arise with regard to consciousness. Another difficulty is that the consciousness of the object cannot arise before

The mind alone is real.

There is no external reality.

If any external reality is admitted, many difficulties arise.

(1) An external object cannot be perceived.

(2) How a momentary object causes perception is unexplained.

consciousness of

the object has come into existence. Neither can it arise afterwards, because the object, being momentary, vanishes as soon as it arises. The external object, according to those who admit it, being the cause of consciousness cannot be simultaneous with consciousness. Nor can it be said that the object may be known by consciousness after it has ceased to exist. For in that case the object being in the *past* there cannot be any *immediate* knowledge or *perception* of it. Perception of *present* objects, as we must admit always to have, remains, therefore, unexplained if objects are supposed to be external to the mind. This difficulty does not arise, if the object be supposed to be nothing other than consciousness.

The Yogācāra view is called Vijñāna-vāda or idealism

The Yogācāra view is called Vijñāna-vāda because it admits vijñāna or consciousness as the only reality. It is *subjective* idealism.

because it admits that there is only one kind of reality which is of the nature of consciousness (vijñāna) and objects which appear to be material or external to consciousness are really ideas or states of consciousness. This theory may be described further as *subjective* idealism, because according

to it the existence of an object perceived is not different from the subject or the perceiving mind.

One of the chief difficulties of subjective idealism is:

The ideas of objects are all latent in the mind. The conditions of a particular moment make a particular idea mature or become conscious and vivid.

If an object depends for its existence solely on the subject, then, how is it that the mind cannot create at will any object at any time? How is it explained that objects do not change, appear or disappear at the will of the perceiver? To explain this difficulty, the Vijñānavādin says that the mind

is a stream of momentary conscious states and within the stream there lie buried the impressions (saṃskāra) of all past experience. At a particular moment that latent impression comes to the surface of consciousness for which the circumstances of the moment are the most favourable. At that moment that impression attains maturity (pari-

Hence a particular object is perceived at a particular time.

pāka), so to say, and develops into immediate consciousness or perception. It is thus that at that particular moment *only that object*, whose latent impression can, under the circumstances, reveal

itself, becomes perceived; just as in the case of the revival of past impressions in memory, though all the impressions are in the mind, only some are remembered at a particular time. This is why only some object can be perceived at a time and not any at will.

The mind considered in its aspect of being a store-house or home of all impressions is called by the Vijñānavādins Ālaya-vijñāna.¹ It may be regarded as the potential mind and answers to the soul or ātman of other systems, with the difference that it is not one unchanging substance like the soul, but is a stream of continuously changing states.

The mind, as the home of all latent ideas, is called Ālaya-vijñāna.

Culture and control of the mind can stop the illusions of external objects and attachment to them.

Otherwise, it only gives rise to thoughts, desires, attachment which bind one more and more to the fictitious external world. The mind, the only reality according to this school, is truly its own place, it can make heaven of hell and hell of heaven.²

The Yogācāras are so called either because they used to practise yoga³ by which they came to realize the sole reality of mind (as Ālayavijñāna) dispelling all belief in the external world or because they combined in them both critical inquisitiveness (yoga) and good conduct (ācāra).⁴ Asaṅga, Vasubandhu, Dignāga are the famous leaders of the Yogācāra school. *Laṅkāvatāra-sūtra* is one of its most important works. *Tattvasaṅgraha* of Śāntarakṣita, with a commentary of Kamalaśīla,⁵ is another very scholarly work of the school.

⁴ *Sarvadarśana-saṅgraha*. Ch. II.

⁵ This work has been published recently in 'Gaekwad's Oriental Series.' Vide p. 14 of the Sanskrit Introduction for the view that this work belongs to the Yogācāra school.

3. *The Sautrāntika School of Representationism*

The Sautrāntikas believe in the reality not only of the mind, but also of external objects. They point out that without the supposition of some external objects,

Proofs for the reality of external objects :

(1) If there were no external object, it would be meaningless to say 'consciousness appears as the external object.'

it is not possible to explain even the illusory appearance of external objects. If one never perceived anywhere any external object, he could not say, as a Vijñānavādin does, that, through illusion, consciousness appears like an external object. The phrase 'like an external object' is as meaningless

(2) Objects are felt directly as being outside the self.

as 'like the son of a barren mother,' because an external object is said by the Vijñānavādin

to be wholly unreal and never perceived. Again, the argument from the simultaneity of consciousness and object to their identity is also defective. Whenever we have the perception of an object like a pot, the pot is felt as external and consciousness of it as internal (i.e. to be in the mind). So the object from the very

(3) If a pot were perceived as identical with the self, then one would say, 'I am the pot' and not, 'There is the pot.'

beginning is known to be different from and not identical with consciousness. If the pot perceived were identical with the subject, then we would have said, "I am the pot." Besides, if there were no external objects, the distinction between the 'consciousness of a pot' and 'the consciousness of a cloth' could not be explained, because as consciousness both are identical; it is only regarding the objects that they differ.

Hence we must admit the existence of different

Ideas are not objects, but only copies of them. Hence objects outside can be inferred from their mental pictures or ideas.

external objects outside consciousness. These objects give particular forms to the different states of consciousness. From these forms or representations of the objects in the mind we can infer the existence of their causes, i.e. the objects outside the mind.

The reason why we cannot perceive at will any object

Perception of external objects depends on four factors: object, mind, sense and auxiliary conditions.

at any time and place, lies in the fact that a perception depends on four different conditions and not simply on the mind. There must be the object to impart its form to consciousness, there must be the conscious mind (or the state of the mind at the just previous moment) to cause the consciousness of the form, there must be the sense to determine the kind of the consciousness, that is, whether the consciousness of that object would be visual, tactual or of any other kind. Lastly, there must be some favourable auxiliary condition, such as light, convenient position, perceptible magnitude, etc. All these combined together bring about the perception of the object. The form of the object thus generated in the mind, is the effect of the object, among other things. The existence of the object is not of course perceived, because what mind immediately knows is the copy or representation of the object in its own consciousness. But from this it can infer the object without which the copy would not arise.

The effect of these conditions is the copy or idea of the object produced in the mind. We infer the object from this idea.

The Sautrāntika theory is, therefore, called also the theory of the inferability of external objects (*Bāhyānumeya-vāda*). The name 'Sautrāntika' is given to this school because it attaches exclusive importance to the authority of the *Sūtra-piṭaka*.¹ The arguments used by

¹ Many works of this class are named 'sūtrānta.' Vide Bögen, *Systems*, p. 5, for this interpretation of 'sautrāntika.'

this school for the refutation of subjective idealism anticipated long ago some of the most important arguments which modern Western realists like Moore use to refute the subjective idealism of Berkeley. The Sautrāntika position, in epistemology, resembles 'representationism' or the 'copy theory of ideas' which was common among Western philosophers like Locke. This exists even now in a modified form among some critical realists.

4. The Vaibhāṣika School

While agreeing with Sautrāntikas regarding the reality of both the mental and the non-mental, the Vaibhāṣikas, like many modern neo-realists, point out that unless we admit that external objects are perceived by us, their existence cannot be known in any other way. Inference of fire from the perception of smoke is possible because in the past we have perceived both smoke and fire together. One who has never perceived fire previously cannot infer its existence from the perception of smoke. If external objects were *never perceived*, as Sautrāntikas hold, then they *could not even be inferred* simply from their mental forms. To one unacquainted with an external object, the mental form would not appear to be the *copy* or the *sign* of the existence of an external object, but an original thing which does not owe its existence to anything outside the mind. Either, therefore, we have to accept subjective idealism (Vijñāna-vāda) or, if that has been found unsatisfactory, we must admit that the external object is directly known.

Vaibhāṣikas admit, like Sautrāntikas, the reality of both mind and external objects.

But unlike Sautrāntikas they hold that external objects are directly known in perception and not inferred.

The Vaibhāṣikas thus come to hold a theory of direct realism ¹ (bāhya-pratyakṣa-vāda).

The Abhidhamma treatises formed the general foundation of the philosophy of the realists. The Vaibhāṣikas followed exclusively a particular commentary, *Vibhāṣā* (or *Abhidhamma-mahāvibhāṣā*), on an Abhidhamma treatise (*Abhidharma-jñāna-prasthāna*).² Hence their name.

IV. THE RELIGIOUS SCHOOLS OF BUDDHISM: HINAYĀNA AND MAHĀYĀNA

In respect of religion Buddhism is divided, as we know, into the two great schools, the Hinayāna and the Mahāyāna.

Representing faithfully the earlier form of Buddhism the Hinayāna, like Jainism, stands as the example of a religion without God. The place of God is taken in it by the universal moral law of karma or dhamma which governs the universe in such a way that no fruit of action is lost and every individual gets the mind, the body and the place in life that he deserves by his past deeds. The life and teachings of Buddha furnish the ideal as well as the promise or the possibility of every fettered individual's attaining liberation. With an unshaken confidence in his own power of achievement and a faith in the moral law that guarantees the preservation of every bit of progress made, the Hinayānist hopes to obtain liberation in this or any

The Hinayāna school adheres to the teaching of Buddha that everyone should work out his own salvation.

¹ Vide J. E. Turner, *A Theory of Direct Realism*, p. 8.

Vide Sogen, *Systems*, pp. 102 and 106.

other future life by following Buddha's noble path. His goal is Arhatship or Nibbāna, the state that extinguishes all his misery. Hinayāna is, therefore, a religion of self-help. It sticks fast to Buddha's saying: "Be a light unto thyself."¹ *Everyone can and should achieve the highest goal for and by himself.* It is inspired by the last words that Buddha said before he passed away: "Decay is inherent in all things composed of parts. Work out your salvation with diligence."

This path which depends neither on divine mercy nor on any other foreign help, Hinayāna is the difficult path of self-help. except the Ideal set by Buddha and the moral law of the universe, is meant only for the strong, who are all too few in this world.

As the fold of Buddhism widened in course of time, it came to include not only the few select persons fit to follow this difficult

It did not suit, therefore, the multitudes of ordinary converts. ideal, but also multitudes of half-convinced nominal converts

who neither understood the Path nor had the necessary moral strength to follow it. With the support of royal patrons like Aśoka, Buddhism gained in number but lost its original quality. The bulk of people who accepted Buddhism, on grounds other than moral, brought it down to their own level. They came with their own habits, beliefs and traditions which soon became a part of the new faith they accepted. The teachers had to choose between upholding the ideal at the cost of number and upholding the

¹ 'Ātma-dīpo bhava.'

number at the cost of the ideal. A few sturdy ones preferred the first. But the majority could not resist the temptation of the second. They came thus to

This gives rise to Mahāyāna which tries to suit all tastes and cultures.

build what they were pleased to call the Greater Vehicle, the Mahāyāna, contrasting it with the orthodox faith of the former, which they nicknamed the Lesser Vehicle, Hīnayāna. By the criterion of number Mahāyāna surely deserved the name, for it was designed to be a religious omnibus, with room enough to hold and suit persons of all tastes and cultures.

Its accommodating spirit and missionary zeal made it possible for Mahāyāna to penetrate into the Himalayas and move across to China, Japan and Korea and absorb peoples of diverse cultures. As it progressed, it assumed newer and newer forms, assimilating the beliefs of the people it admitted. Modern Mahāyānist writers are reasonably proud of their faith and love to call it a living, progressive religion whose adaptability is the sign of its vitality.

The accommodating spirit of Mahāyānism can be traced back to the catholic concern which Buddha himself had for the salvation of all beings. Mahāyānism emphasizes this aspect of the founder's life and teachings. Mahāyānists point out that the long life of Buddha, after enlightenment, dedicated to the service of the suffering beings, sets an example and an ideal, namely, that enlightenment should be sought

Mahāyāna lays great stress on Buddha's anxiety for the salvation of fellow beings.

The object of enlightenment is not one's own salvation.

not for one's own salvation, but for being able to minister to the moral needs of others. In fact, in

It is the ability to liberate all suffering beings.

ment of selfishness

The greatness of Mahāyāna lies in this spirit, and the inferiority of Hīnayāna is due to the lack of it.

faith, Mahāyānists contend, consists in this ideal and the inferiority of the Hīnayānists in the lack of it.¹

The new elements which Mahāyānism came to acquire or develop in its different branches were many and sometimes conflicting. We shall mention here only a few of the more important ones.

(a) *The Ideal of Bodhisattva*: As noted previously Mahāyāna regards even the desire for one's own salvation as selfish at bottom. In the place of personal liberation, it establishes the 'liberation of all sentient

¹ All these aspects of Mahāyānism are summed up by the eminent Japanese writer, D. T. Suzuki, in his *Outlines of Mahāyāna Buddhism*, thus: "It (Mahāyānism) is the Buddhism which, inspired by a progressive spirit, broadened its original scope, so far as it did not contradict the inner significance of the teachings of the Buddha, and which assimilated other religio-philosophical beliefs within itself, whenever it felt that, by so doing, people of more widely different characters and intellectual endowments could be saved" (p. 10).

beings' as the ultimate goal of every Mahāyānist's spiritual aspirations. The

The ideal of Bodhisattva is attainment of perfect wisdom with a view to being able to lead all beings out of misery.

vow that a devout Mahāyānist is expected to take is that he would try to achieve the State of Enlightenment, Bodhisattva (the Wisdom-State-of-Existence), not to live aloof from the world but to work with perfect wisdom and love among the multitudes of suffering beings for removing their misery and achieving their salvation. The spiritual ideal of Mahāyāna has, therefore, come to be called Bodhisattva.

One who has attained this ideal of Enlightenment

Love of all beings, along with wisdom, marks the perfect person or Bodhisattva.

and works for the salvation of other beings is also called a Bodhisattva. Love and wisdom (karuṇā and prajñā) constitute the essence of his

existence.¹ Speaking about such perfect persons Nāgārjuna says in the *Bodhicitta*: "Thus the essential nature of all Bodhisattvas is a great loving heart (mahākaruṇā-citta) and all sentient beings constitute the object of its love."² "Therefore, all Bodhisattvas, in order to emancipate sentient beings from misery, are inspired with great spiritual energy and mingle themselves in the filth of birth and death. Though thus they make themselves subject to the laws of birth and death, their hearts are free from sins and attachments. They are like unto those

A Bodhisattva exchanges his deserts with those of the fellow beings and suffer to relieve their misery.

immaculate, undefiled lotus-flowers which grow out of mire, yet are not contaminated by it."³ By an exchange (parivarta) of the fruits of action, a Bodhi-

¹ Vide Suzuki, *Outlines*, p. 226. ² *Ibid.*, p. 222. ³ *Ibid.*, pp. 298-94.

sattva relieves the miseries due to others with his own good deeds and suffers the consequences of their actions himself.

This ideal of Bodhisattva is nurtured by the Mahāyāna philosophy, which comes to think that all individuals are unreal as separate particular phenomena, and that they are all really grounded in one transcendental Reality (Ālaya-vijñāna, according to some Yogācāras, or Śūnya or Tathātā, according to some Mādhyamikas), of which they are the partial or illusory manifestations.

The ideal of Bodhisattva is based on the philosophy of the unity of all beings.

This philosophy favoured the rejection of the idea of the individual ego and acceptance of an universal absolute self (Mahātman or Paramātman)¹ as the real self of man. Striving for the liberation of all and not simply for the little self (hīnātman) was, therefore, the logical outcome of this philosophy of the unity of all beings. Moreover, the idea that the transcendental Reality is not away from but within the phenomena paved the way for the belief that perfection or nirvāṇa is not to be sought away from the world but within it. Nirvāṇa, says Nāgārjuna, is to be found within the world by those who can see what the world really is at bottom.² Asceticism of the Hinayāna is, therefore, replaced by a loving, enlightened interest in the world's affairs.

(b) *Buddha as God*: The philosophy which gives the advanced followers of Mahāyāna, on the one hand, the ideal of Bodhisattva, supplies the backward ones, on the other hand, with a religion of promise and hope. When an ordinary man finds himself crushed in life's struggle and fails, in spite of all his natural egoism, to avert misery, his weary spirit craves for

Buddha comes to be conceived as God.

¹ Vide Bogen, *Systems*, pp. 23-24.

² Vide Nāgārjuna's saying "na sarvasāraṇya nirvāṇāt kiñcidasti viśeṣaṇam," etc., *Mādhyamika-sūtra*, Chap. 25, *Kārikā* 19.

some unfailing source of mercy and help. He turns to God. A religion of self-help, such as we have in early Buddhism, is a cold comfort to him. To such forlorn multitudes Mahāyāna holds out the hope that Buddha's watchful eyes are on all miserable beings.

Buddha is identified with the transcendental Reality that Mahāyāna philosophy accepted. The historical Buddha or Gautama is believed, in the common Indian way, to be the incarnation of that ultimate Reality or Buddha. Many other previous incarnations of Buddha are also believed in and described in the famous Jātakas (or stories of the different *births* of Buddha). As in Advaita Vedānta, so also here, the ultimate Reality in itself is conceived as beyond all description (like the Nirguṇa Brahma). But this reality is also thought of as manifesting itself in this world, as the Dharmakāya or the regulator of the universe. In this aspect of Dharmakāya the ultimate Reality or Buddha is anxious for the salvation of all beings, lends himself to incarnation in the different spiritual teachers and

Buddha is identified with transcendental Reality and is attributed the power of incarnation.

Buddha incarnated as teachers and helpers of beings.

helps all beings out of misery. So Buddha as the Dharmakāya, for all practical purposes, takes the place of God to whom the weary heart can pray for help, love and mercy. In this aspect Buddha is also called Amitābha Buddha. Thus the religious hankerings of those who accepted Buddhism are also satisfied by the Mahāyāna by identifying Buddha with God.

(c) *The Restoration of the Self*: One of the sources of the ordinary man's dread of earlier Buddhism must

have been the negation of self. If there is no self, for

Though individual selves are unreal, there is one universal self, i.e. the Reality behind all phenomena. This fact is the Real Self of all beings.

whom is one to work? Mahāyāna philosophy points out that it is the little individual ego which is false.

But this apparent self has behind it the reality of one transcendental

self (Mahātman), which is the Self of all beings. The devout Mahāyānist thus finds his self restored in a more elevating and magnified form.

At the present day the followers of Hinayāna and Mahāyāna often try to belittle one another. But to the discerning outsider they stand as the living examples of a fight between two equally noble motives, namely, greater purity and greater utility. To impartial

The Hinayāna and the Mahāyāna are inspired by two different, but equally noble, motives.

observers the mighty current of Buddhism, like every current, naturally divides itself into two parts—the narrow but pure and im-

petuous stream that runs through the solitary uplands near the source, and the gradually widening river that floods and fertilises the vast plains below, though not unmingled with the indifferent streams that increase its volume on the way and not unsoiled with the vast amount of dirt that it carries down. The first without the second would remain sublime but relatively useless; the second without the first would cease to be.

CHAPTER V

THE NYĀYA PHILOSOPHY

I. INTRODUCTION

The Nyāya philosophy was founded by the great sage Gotama who was also known as Gautama and Akṣapāda. Accordingly, the Nyāya is also known as the Akṣapāda system. This philosophy is primarily concerned with the conditions of correct thinking and the means of acquiring a true knowledge of reality. It is very useful in developing the powers of logical thinking and rigorous criticism in its students. So we have such other names for the Nyāya philosophy as Nyāyavidyā, Tarkaśāstra (i.e. the science of reasoning), and Ānvikṣikī (i.e. the science of critical study).

But the logical problem as to the methods and conditions of true knowledge or the canons of logical criticism is not the sole or the ultimate end of the Nyāya philosophy. Its ultimate end, like that of the other systems of Indian philosophy, is liberation, which means the absolute cessation of all pain and suffering. It is only in order to attain this ultimate end of life that we require a philosophy for the knowledge of reality, and a logic for determining the conditions and methods of true knowledge. So we may say that the Nyāya, like other Indian systems, is a philosophy of life, although

Its ultimate end is liberation, although its main interest is in logic.

it is mainly interested in the problems of logic and epistemology.

The first work of the Nyāya philosophy is the *Nyāya-sūtra* of Gotama. It is divided into five adhyāyas or books, each containing two āhnikas or sections. The subsequent works of the Nyāya system, such as Vātsyāyana's *Nyāya-bhāṣya*, Uddyotakara's *Nyāya-vārttika*, Vācaspati's *Nyāya-vārttika-tātparyā-ṭīkā*, Udayana's *Nyāya-vārttika-tātparyā-parīśuddhi* and *Kusumāñjali*, Jayanta's *Nyāyamañjarī*, etc., explain and develop the ideas contained in the *Nyāya-sūtra*, and also defend them against the attacks of hostile critics. The ancient school of the Nyāya (prācīna-nyāya) is thus a development of the sūtra-philosophy of Gotama through a process of attack, counter-attack and defence among the Naiyāyikas and their hard critics. The modern school of the Nyāya (navya-nyāya) begins with the epoch-making work of Gaṅgeśa, viz. the *Tattvacintāmaṇi*. This school flourished at first in Mithilā, but subsequently became the glory of Bengal with Navadvīpa as the main centre of its learning and teaching. The modern school lays almost exclusive emphasis on the logical aspects of the Nyāya, and develops its theory of knowledge into a formal logic of relations between concepts, terms and propositions. With the advent of the modern Nyāya, the ancient school lost some of its popularity. The syncretist school of the Nyāya is a later development of the Nyāya philosophy into the form of a synthesis or an amalgamation between the Nyāya and the Vaiśeṣika system.

The whole of the Nyāya philosophy may be conveniently divided into four parts, namely, the theory of knowledge, the theory of the physical world,

The sixteen philosophical topics of the Nyāya.

the theory of the individual self and its liberation, and the theory of God. It should, however, be observed here that the Nyāya system is in itself an elaboration of sixteen philosophical topics (padārtha). These are (1) *pramāṇa*, the sources or methods of knowledge ; (2) *prameya*, the objects of knowledge ; (3) *samśaya*, doubt ; (4) *prayojana*, the end for the sake of which one acts ; (5) *dṛṣṭānta*, an undisputed fact cited as an example ; (6) *siddhānta*, a proved doctrine ; (7) *avayava*, the constituent propositions of inference ; (8) *tarka*, a hypothetical argument ; (9) *nirṇaya*, the ascertainment of truth ; (10) *vāda*, a discussion for the attainment of truth ; (11) *jalpa*, mere wrangling or a wordy warfare for mere victory in a debate ; (12) *vitandā*, a merely destructive criticism ; (13) *hetvābhāsa*, the fallacies of inference ; (14) *chala*, the fallacy of ambiguity or the illicit process of contradicting a statement by taking it in a sense other than the intended one ; (15) *jāti*, a futile objection based on mere similarity or dissimilarity, without any universal principle of relation among things ; (16) *nigrahassthāna*, the point at which one has to admit defeat.¹

The Nyāya philosophy is a system of logical realism.

It is a system of logical realism.

In philosophy realism means the theory or doctrine that the existence of things or objects of the world is independent of all knowledge or relation to mind. The

¹ *Nyāya-sūtra*, I. 1. 1.

existence of ideas and images, feelings of pleasure and pain, is dependent on some mind. These cannot exist unless they are experienced by some mind. But the existence of tables and chairs, plants and animals, does not depend on our minds. These exist and will continue to exist, whether we know them or not. Realism is a philosophical theory which holds that the existence of all things or objects of the world is quite

independent of all minds, finite or
 Definitions of real- infinite, human or divine. Idealism,
 ism and idealism. on the other hand, holds that

things or objects can exist only as they are related to some mind. Just as feelings and cognitions exist only as they are in some mind, so the objects of the world exist only as they are actually experienced or at least thought of by us or by God. Now the Nyāya is a realistic philosophy in so far as it holds that the objects of the world have an independent existence of their own apart from all knowledge or experience. In the Nyāya this realistic view of the world is based, not on mere faith or feeling, intuition or scriptural testimony, but on logical grounds and critical reflections. According to it, the highest end of life, i.e. liberation, can be attained only through a right knowledge of reality. But a true knowledge of reality presupposes an understanding of what knowledge is, what the sources of knowledge are, how true knowledge is distinguished from wrong knowledge, and so forth. In other words, a theory of reality or metaphysics presupposes a theory of knowledge or epistemology. Hence the realism of the Nyāya is based on the theory of knowledge which is the logical foundation of all philosophy. Thus we

see that the Nyāya is a system of philosophy which may be justly characterized as logical realism.

II. THE NYĀYA THEORY OF KNOWLEDGE

The Nyāya theory of reality is based on the Nyāya theory of knowledge. According to this, there are four distinct and separate sources of true knowledge. These are (i) *pratyakṣa*, perception ; (ii) *anumāna*, inference ; (iii) *upamāna*, comparison ; and (iv) *śabda*, testimony. We shall explain them separately. But before we come to these *pramāṇas* or sources of valid knowledge, let us understand what knowledge is, what the different kinds of knowledge are, and how true knowledge is distinguished from false knowledge.

1. *Definition and Classification of Knowledge*¹

Knowledge or cognition (*jñāna* or *buddhi*) is the manifestation of objects. Just as the light of a lamp reveals or shows physical things, so knowledge manifests all objects that come before it. Knowledge is of different kinds. First we have valid knowledge (*pramā* or *pramiti*), which has been subdivided into perception, inference, comparison and testimony. Then, we have non-valid knowledge (*apramā*), which includes memory (*smṛti*), doubt (*saṁśaya*), error (*bhrama* or *viparyaya*) and hypotheti-

¹ Vide *Tarkasaṅgraha*, pp. 32-35, 82 ; *Tarkabhāṣā*, p. 29 ; *Tātparyā*, (ikā, 1. 1. 1 f.

cal argument (tarka). True or valid knowledge is a

Definition of valid knowledge. definite or certain (asandigdha), and

a faithful or unerring (yathārtha) presentation (anubhava) of the object. My visual perception of the table before me is a true cognition, because in it the table is presented to me directly

Different kinds of non-valid knowledge: memory, doubt, error and hypothetical argument. just as it really is, and I am certain about the truth of my cognition. Memory is not valid knowledge, because in it the remembered

object is not directly presented, since it is past, but only represented or recalled by the mind.¹

Doubtful cognition cannot be called pramā, because it is not certain knowledge. Error is undoubted knowledge indeed, and may also be presentative, but it is not true to the nature of its object. Sometimes we perceive a snake in a rope in the twilight and have then no doubt about the reality of what we see. Still this perception is erroneous, because it is not a true cognition of the object (yathārthānubhava). Tarka is not pramā, since it does not give us any knowledge of objects. A tarka is like this: Looking out of the window of your class-room, you see a mass of smoke rising from a distant house and say that the house has caught fire. A friend contradicts you and asserts that there is no fire. Now you argue: if there is no fire, there cannot be smoke. This argument, starting with an 'if' and exposing the absurdity

¹ Some Mīmāṃsakas exclude memory from valid knowledge, on the ground that it does not give us any new knowledge. It is only a reproduction of some past experience and not a cognition of anything not known before (anadhigata).

of your friend's position, and thereby indirectly proving your own, is *tarka*. It is not *pramā* or valid knowledge, because to argue like this is not to know the fire, but to confirm your previous inference of fire from smoke. That there is fire, you know by inference. To argue that if there is no fire there cannot be smoke, is not to know the fire as a real fact either by way of perception or by that of inference.

The next question is: How is true knowledge distinguished from false knowledge?

How true knowledge is distinguished from false knowledge.

Knowledge is true when it agrees with or corresponds to the nature of its object, otherwise it becomes false.

Your knowledge of the rose as red is true if the rose has really a red colour as you judge it to have (*tadvati tatprakāra*). On the contrary, your perception of the sun as moving is wrong, since the motion belongs really to the earth and is wrongly transferred to the sun which remains relatively motionless or stationary (*tadabhāvavati tatprakāra*). But then it may be asked: How do we know that the first knowledge

is true and the second false? In

The tests of truth and error.

other words: How do we test the truth or falsity of knowledge? The

Naiyāyikas (also the Vaiśeṣikas, Jains and Bauddhas) explain it in the following manner: Suppose you want a little more sugar for your morning tea and take a spoonful of it from the cup before you and put it into your tea. Now the tea tastes sweeter than before and you know that your previous perception of sugar was true. Sometimes, however, it happens that while looking for sugar, you find some white powdered substance and put

a pinch of it into your mouth under the impression that it is sugar. But to your utter surprise and disappointment, you find that it is salt and not sugar. Here then we see that the truth and falsity of knowledge consist respectively in its correspondence and non-correspondence to facts. On the other hand, the test of the truth or falsity of knowledge is the success or failure of our practical activities in relation to its object (*pravṛttisāmarthyā* or *pravṛttivisaṃvāda*). True knowledge leads to successful practical activity, while false knowledge ends in failure and disappointment.¹

2. Perception

In Western logic the problem of perception as a source of knowledge has not been properly discussed. The reason probably is this. We generally believe that what is given in perception must be true. Ordinarily, no man questions the truth of what he perceives by his senses. So it is thought that it is unnecessary, if not ridiculous, to examine the validity of perception, or to determine the conditions of perception as a source of valid knowledge. Indian thinkers are more critical than dogmatic in this respect, and make a thorough examination of perception in almost the same way as Western logicians discuss the problem of inference.

¹ For a detailed account of the nature and forms of knowledge, and the tests of truth and error, *vide* S. C. Chatterjee, *The Nyāya Theory of Knowledge*, Chaps. III, V.

(i) Definition of Perception

In logic perception is to be regarded as a form of true cognition. Taking it in this sense, some Naiyāyikas define perception as a definite cognition which is produced by sense-object contact and is true or unerring.¹ The perception of the table before me is due to the contact of my eyes with the table, and I am definite that the object is a table. The perception of a distant figure as either a man or a post is a doubtful and indefinite cognition, and, therefore, not a true perception. The perception of a snake in a piece of rope is definite but false; and so it is different from valid perception.

Perception is a definite and true cognition of objects produced by sense-object contact.

The definition of perception as a cognition due to the stimulation of our sense organs by the perceived object is generally accepted by us. It is accepted also by many systems of philosophy, Indian and Western. Some Naiyāyikas, the Vedāntins and others, however, reject it on the ground that there may be perception without sense-object contact. God, we are told, perceives all things, but has no senses. When I see a snake in a rope, there is really no snake to come in contact with my eyes. Mental states like the feelings of pleasure and pain are directly cognised or perceived by us without the help of any sense organ. All this shows that sense-object contact is not common to, and cannot, therefore, be a defining character of, perceptions. What, however, is really common to, and distinctive of, all perceptions is a feeling of *directness* or *immediacy* of the knowledge given by them. We are said to perceive an object, if and when we know it directly, i.e. without taking the help of previous experiences or any reasoning process (jñānākaraṇaka). If

Another definition of perception is that it is immediate cognition.

¹ *Nyāya-sūtra*, 1. 1. 4.

at midday you turn your eyes overhead, you see the sun directly, and not by means of any process of inference or reasoning. There is neither any necessity nor any time for you to think and reason before the perception of the sun arises in your mind. So some Indian logicians propose to define perception as immediate cognition (*sākṣāt pratīti*), although they admit that perception is in almost all cases conditioned by sense-object contact.¹

(ii) Classification of Perception *

There are different ways of classifying perception.

First, we have the distinction between *laukika* or ordinary and *alaukika* or extraordinary perceptions.

This distinction depends on the way in which the senses come in contact with their objects. We have *laukika* perception when there is the usual sense-contact with objects present to sense. In *alaukika* perception, however, the object is such as is not ordinarily present to sense, but is conveyed to sense through an unusual medium. Ordinary perception, again,

is of two kinds, namely, external (*bāhya*) and internal (*mānasa*). The former is due to the external senses of sight, hearing and touch, taste and smell. The latter is brought about by the mind's contact with mental states and processes. Thus we have six kinds of *laukika* or ordinary perceptions, viz. the visual (*cākṣuṣa*), auditory (*śrautṛa*), tactual (*spāṛśana*), gustatory (*rāsana*), olfactory (*ghrāṇaja*), and the internal or

External and internal perceptions.

¹ Vide *Tarkabhāṣā*, p. 5; *Siddhāntamuktāvalī*, pp. 285-86; *Tattva-cintāmaṇi*, pp. 539-43, 552.

² Vide *Bhāṣāpariccheda* and *Muktāvalī*, 52.

mental (mānasa) perception. *Alaukika* or extraordinary perception is of three kinds, viz. sāmānya-lakṣaṇa, jñāna-lakṣaṇa and yogaja.

According to the Nyāya (also the Vaiśeṣika, Mīmāṃsā, and Jaina), there are six organs of knowledge. Of these, five are external and one is internal.

The six organs of knowledge, viz. the five external senses and the internal sense, manas.

The five external senses are the organs of smell (ghrāṇa), taste (rasanā), sight (cakṣuḥ), touch (tvak), and hearing (śrotra). These perceive respectively the physical qualities of smell, taste, colour, touch and sound. They are physical in nature and each of them is constituted by that very same physical element whose qualities are sensed by it. This seems to be suggested by the fact that in many cases we use the same name for both the sense organ and the physical quality sensed by it. It is probably based on the principle that only like can perceive like. Mind (manas) is the internal organ which perceives such qualities of the soul as desire (icchā), aversion (dveṣa), striving or willing (prayatna), pleasure (sukha), pain (duḥkha) and cognition. It is not made of the material elements (bhūtas) like the external senses. It is not limited to the knowledge of any particular class of things or qualities, but functions as a central co-ordinating organ in all kinds of knowledge. The Nyāya view of mind as an 'internal sense' (antarindriya) is accepted by the Vaiśeṣikas, the Sāṅkhyas, the Mīmāṃsakas and others. But some Vedāntins criticise and reject the Nyāya view of mind as an 'inner sense.'

(iii) Extraordinary Perception¹

Alaukika or extraordinary perception is of three kinds.

There are three kinds of extraordinary perceptions. The first is *sāmānyalakṣaṇa* or the perception of classes.

The first is called *sāmānyalakṣaṇa*. When we say, "All men are mortal," we know that mortality is true of all men. This means that mortality is true, not of this or that man only, nor of all men who are dead and gone, but of all men in the past, present and future. In other words, it means that mortality is true of the class of men. But the question is: How do we know the whole class of men? We cannot know it by ordinary perception, since all men cannot be physically present to our senses. Yet we must somehow know all men. The Naiyāyika explains this knowledge of the class by extraordinary perception, in which the class *men* is presented through the class-essence or the universal "manhood." When I perceive a man as man, I do perceive the manhood in him; otherwise I cannot directly recognise him as man. Now this direct knowledge or perception of the universal *manhood*, is the medium through which I perceive all men or the class of men. To perceive manhood is to perceive all men so far as they are possessed of the universal "manhood." In short, to perceive manhood is to perceive all men as the individuals in which the universal "manhood" inheres. This perception of the class of men, being due to the perception of the universal (*sāmānya*), is called *sāmānyalakṣaṇa* perception and is marked off as extraordinary (*alaukika*) on account of its obvious difference from our ordinary perceptions.

The second kind of extraordinary perception is called *jñānalakṣaṇa*. We often use such expressions as "ice looks cold," "the stone looks hard," "the grass looks soft," and so forth. This means that the coldness of ice, the hardness of a stone, the softness of luxuriant grass are perceived by us with our eyes. But the question is: How can the eyes perceive touch qualities, like hardness and softness, which can ordinarily be sensed only by the sense of touch? Among Western

¹ *Op. cit.*, 63-65. For a fuller account, vide S. C. Chatterjee, *The Nyāya Theory of Knowledge*, Ch. X.

psychologists, Wundt, Ward and Stout explain such perceptions by "complication,"¹ a process by which sensations or perceptions of different senses become so closely associated as to become integral parts of a single perception. Similarly, when on seeing something one says, "I see a piece of fragrant sandalwood," he has a perception of its fragrance by means of his eyes. How can we explain this visual perception of fragrance which can be ordinarily sensed only by the sense of smell? The Naiyāyika says that here our past olfactory experience of fragrance as closely associated with the visual appearance of sandalwood (since every time we smelt it we saw its colour, unless that was in a dark room) brings about the present visual perception of fragrance simultaneously with that of its colour. This present perception of fragrance, being due to the past knowledge of fragrance (*saṃbhā-jāna*), has been called *jñānalakṣaṇa* perception, which is also extraordinary in the sense that it is brought about by a sense organ which is not ordinarily capable of perceiving fragrance.

The third kind of extraordinary perception is called *yogaja*. It is the intuitive perception

The third is *yogaja* or intuitive perception of *yogins*.

of all objects—past and future, hidden and infinitesimal—by one who possesses some supernatural power generated by devout meditation (*yogābhyāsa*). In

the case of those who have attained spiritual perfection (*yukta*), such intuitive knowledge of all objects is constant and spontaneous. In the case of others who are on the way to perfection (*yujāna*), it requires the help of concentration as an auxiliary condition. The reality of *yogaja* perception is generally accepted in Indian philosophy on the authority of the scriptures (*śruti* and the like). It is to be observed also that the Vedāntins² severely criticise and reject the Nyāya theory of *sāmānyalakṣaṇa* and *jñānalakṣaṇa* perceptions, although they do not repudiate the idea of *yogipratyakṣa* out of respect for the scriptural texts in its favour.

¹ Vide Stout, *Manual of Psychology*, p. 102; Wundt, *Human and Animal Psychology*, pp. 285-88; Ward, Article "Psychology," *Encyclopædia Britannica*, 9th ed., Vol. XX, p. 57. Cf. Woodworth, *Psychology* (9th ed.), p. 115, where the perception of the smell of roses shut in a glass-cage and seen through the glass is cited as an example of hallucination.

² Vide *Advaitasiddhi*, pp. 187-89; *Vedāntaparibhāṣā*, Ch. I.

(iv) Three Modes of Perception ¹

According to another classification, ordinary perception is of two kinds, namely, *nirvikalpaka* or the indeterminate and *savikalpaka* or the determinate. Here the principle of classification is the more or less developed character of perceptual knowledge. To these two we may add *pratyabhijñā* or recognition. Keeping in view the nature of perception, the *Naiyāyikas* distinguish between three modes of ordinary perception. Extraordinary perception is always determinate, since it is definite and explicit knowledge.

Nirvikalpaka or indeterminate perception is the cognition of an object as just an existent thing without an explicit recognition and characterization of it as this or that kind of thing. Suppose you look at an orange placed on the other side of your table. Immediately after the first glance, or after the first moment of contact between your eyes and the object, you apprehend something, its colour, shape, etc., along with a general character called orangeness. But at first sight, you do not think of it as yellow or round, or as an orange. There may be a simple perception of an object and its specific and generic qualities, without any judgment of it as this or that kind of thing. Suppose on the first day of your examination you enter the bath room engrossed in thinking about the possible questions and their answers. It is not unlikely that you may finish your bath without thinking of the water used by you as water. Yet it cannot be said that you do not perceive the water: but for a very real perception of it, your act of bathing cannot be explained. This perception of water and its characters, without any thought or judgment of it as water, as liquid, as cold, etc., is the *nirvikalpaka* or indeterminate perception of it.

¹ Vide *Nyāya-bhāṣya* and *Tātparyasikṣā*, 1.1.4; *Tarkabhāṣā*, p. 5; *Nyāyatīlāvati*, p. 53. For a detailed account, vide S. C. Chatterjee, *The Nyāya Theory of Knowledge*, Ch. IX.

Savikalpaka perception is the cognition of an object as possessed of some character. While

The second is savikalpaka, in which the object is judged as a particular kind of thing.

nirvikalpaka is the cognition of the existence of a thing as such, savikalpaka may be said to be the recognition of its nature. Thus when, looking at the orange, I judge within myself "this is an orange," I do not only cognise the existence of the orange as such, but also explicitly recognize or mentally assert what existence it is. Here the existent fact, *this*, becomes the subject of a proposition and orangeness is related to it as a predicate. Thus we may say that nirvikalpaka is a simple apprehension and savikalpaka a predicative judgment of the same object. There cannot be any savikalpaka perception of an object without a previous nirvikalpaka perception of it. Unless we first know the existence of an object we cannot possibly know it as this or that kind of object. Unless I first perceive water as something there in a pool, I cannot know it as water or as a substance which is qualified by certain attributes.

Pratyabhijñā is recognition in its literal meaning. It is

The third is pratyabhijñā, which is the cognition of an object as what was cognised before.

a re-cognition of some object, i.e. a cognition of it as that which was cognised before. In it we know that the thing which we now cognise is the same as that which was cognised before, as when one says: "This must be the same man who pushed me down the tram-car yesterday." It should be remarked here that the distinctions of nirvikalpaka perception, savikalpaka perception, and pratyabhijñā have not been recognized, or recognized in the same way, in all the systems of Indian philosophy. While the Vaiśeṣika, the Sāṅkhya and the Mīmāṃsā system accept, on the whole, the Nyāya view as explained here, the Bauddha and the Advaita Vedānta system reject it and hold very different views.

3. Inference

(i) Definition of Inference

After perception comes anumāna or inference. Anumāna (anu—after, māna—knowledge) literally

means a cognition or knowledge which follows some other knowledge. Take the following

Inference is the process of knowing something, not by observation, but through the medium of a mark that is invariably related to it.

illustrations: "The hill is fiery, because it smokes, and whatever smokes is fiery ;" "Devadatta is mortal, because he is a man, and all men are mortal." In

the first example, we pass from the perception of smoke in the hill to the knowledge of the existence of fire in it, on the ground of our previous knowledge of the universal relation between smoke and fire. In the second example, we know the mortality of Devadatta, which is not now perceived, from the presence of manhood in him. Thus we see that inference is a process of reasoning in which we pass from the apprehension of some mark (*liṅga*) to that of something else, by virtue of a relation of invariable concomitance (*vyāpti*) between the two. As Dr. B. N. Seal puts it: "Anumāna (inference) is the process of ascertaining, not by perception or direct observation, but through the instrumentality or medium of a mark, that a thing possesses a certain character."¹

(ii) The Constituents of Inference ²

From the definition of inference it will appear that an inference must have as its

Inference has three terms and at least three propositions.

constituents three terms and at least three propositions. In in-

ference we arrive at the knowledge of some character

¹ *The Positive Sciences of the Ancient Hindus*, p. 250.

² *Vide Muktāvaṇī*, 56-57.

of a thing through the knowledge of some mark and that of its universal relation to the inferred character. Thus in the above inference of fire we know the unperceived fire in the hill through the perception of smoke in it and the knowledge of an invariable relation between smoke and fire. There is, first, the knowledge or apprehension of smoke as a mark in the hill. Secondly, there is a recollection of the relation of invariable concomitance between smoke and fire, as we have observed it in the past. Thirdly, we have the resulting knowledge of the existence of the unperceived fire in the hill. Now in this inference the

Pakṣa is the minor term, sādhyā the major term, and sādhanā the middle term of *anumāna* or inference.

hill is the pakṣa (minor term), since it is the subject under consideration in the course of the inferential reasoning. Fire is the sādhyā (major term), as that is something which we want to prove or establish in relation to the hill by means of this inference. Smoke is the liṅga (middle term), as it is the mark or sign which indicates the presence of fire. It is also called the *hetu* or sādhanā, i.e. the reason or ground of inference. Thus corresponding to the minor, major and middle terms of the syllogism, inference, in Indian logic, contains three terms, namely, pakṣa, sādhyā and *hetu*. The pakṣa is the subject with which we are concerned in any inference. The sādhyā is the object which we want to know in relation to the pakṣa, or the inferable character of the pakṣa. The *hetu* is the reason for our relating the sādhyā to the pakṣa. It is the ground of our knowledge of the sādhyā as related to the pakṣa.

In order of the events which take place when a certain thinker is inferring, the first step in inference is the apprehension of the *hetu* (smoke) in the *pakṣa* (hill), the second a recollection of the universal relation between *hetu* and *sādhya* (smoke and fire), and the last is the cognition of the *sādhya* (fire) as related to the *pakṣa* (hill). But as a matter of formal statement or verbal expression, the first step in inference is the predication of the *sādhya* with regard to the *pakṣa*, e.g. "The hill is fiery." The second is the affirmation of the *hetu* as related to the *pakṣa*, e.g. "Because the hill is smoky." The third is the affirmation of the *hetu* as invariably related to the *sādhya*, e.g. "Wherever there is smoke, there is fire, as in the kitchen." Thus in inference we must have at least three propositions, all of which are categorical, and may be affirmative or negative. The first proposition corresponds to the conclusion of the syllogism, the second to the minor premise, and the third to the major premise. Thus inference, in Indian logic, may be said to be a syllogism consisting of three categorical propositions. But the order of the propositions is reversed in Indian logic, in so far as it puts the conclusion of the syllogism first, and its usual major premise last, in the formal statement of an inference.

Indian logicians are agreed that so far as inference is *svārtha* or for oneself, it requires no formal statement by way of a number of propositions. It is only in the case of inference which is *parārtha*, i.e. meant to prove or demonstrate some truth, that we require

The three steps and propositions in an inference.

Indian and Western terms of the syllogism.

to state an inference in the form of a rigorous chain of argument without any gap. This is the logical form of an inference. We may say that in Indian logic inference corresponds roughly, in respect of its form, to the categorical syllogism of Western logic. But there are certain important differences between the Indian and Western forms of the syllogism. In Western logic, the syllogism is generally stated in the form of three propositions, of which the first is the major premise, the second is the minor premise, and the last is the conclusion. According to the Naiyāyikas, however, inference, as a conclusive proof, must be stated in the form of five propositions, called its *avayavas* or members. These are *pratijñā*, *hetu*, *udāharaṇa*, *upanaya*, and *nigamana*.¹ The five-membered syllogism may be thus illustrated:

- (1) Ram is mortal (*pratijñā*) ;
- (2) Because he is a man (*hetu*) ;
- (3) All men are mortal, *e.g.* Socrates, Kant, Hegel (*udāharaṇa*) ;
- (4) Ram also is a man (*upanaya*) ;
- (5) Therefore he is mortal (*nigamana*).

The *pratijñā* is the first proposition, which asserts something. The *hetu* is the second proposition, which states the reason for this assertion. The *udāharaṇa* is the universal proposition, showing the connection between the reason and the asserted fact, as supported by known instances. *Upanaya* is the application of the universal proposition to the present case. *Nigamana*

¹ *Vide Tarkadhāṛṣā*, pp. 48-49. For a critical discussion of the logical form of inference, *vide* S. C. Chatterjee, *The Nyāya Theory of Knowledge*, pp. 297-305.

is the conclusion which follows from the preceding propositions.¹

(iii) The Grounds of Inference²

Now we come to the consideration of *vyāpti* or invariable concomitance between the middle term and the major term, which is the logical ground of inference. In inference our knowledge of the *sādhya* (fire) as related to the *pakṣa* (hill) depends on the previous knowledge of the *hetu* (smoke) as related to the *pakṣa*, on the one hand, and universally connected with the *sādhya*, on the other. We infer that there is fire in the hill, because we see that there is smoke in the hill and know that smoke is always accompanied by fire. It appears, therefore, that an inference has two conditions. The first is cognition of the *hetu* or middle term (smoke) in the *pakṣa* or minor term (the hill). The second is the relation of invariable concomitance between the middle and the major term. That there is fire in the hill is a conclusion which we can justify only if we know that there is an invariable concomitance between the hill-smoke and fire. This relation of invariable concomitance between the *hetu* and the *sādhya*, or the middle term and the major term of inference is technically called *vyāpti*, and is regarded as the logical ground of inference, since it guarantees the truth of the conclusion. So the questions we are to consider now, are: What is *vyāpti*? How is *vyāpti* known by us?

With regard to the first question, we have to say that *vyāpti* literally means the state of pervasion. It implies a correlation between two facts, of which one is pervaded (*vyāpaka*), and the other pervades (*vyāpaka*). A fact is said to pervade another when it always accompanies the other. A fact is said to be

¹ The *Mīmāṃsā* and the *Vedānta* hold that the first three or the last three propositions suffice for inference.

² Vide *Tarkabhāṣā*, pp. 7 f.; *Tarkasaṅgraha*, pp. 43 f.; *Bhāṣa-pariccheda* and *Muktāvalī*, pp. 137-38; *Sarvadarśan*, Ch. II; *Paribhāṣā*, Ch. II.

pervaded by another when it is always accompanied by the other. In this sense smoke is pervaded by fire, since it is always accompanied by fire, or, all smoky objects are fiery. But while all smoky objects are fiery, all fiery objects are not smoky, e.g. the red-hot iron ball. A vyāpti between terms of unequal extension, such as smoke and fire, is called *asamavyāpti* or *viṣamavyāpti*. It is a relation of non-equipollent concomitance between two terms, from one of which we may infer the other, but not *vice versa*. We may infer fire from smoke, but not smoke from fire. As distinguished from this, a vyāpti between two terms of equal extension is called *samavyāpti* or equipollent concomitance. Here the vyāpti holds between two terms which are co-extensive, so that we may infer either of them from the other, e.g. 'nameable' and 'knowable.' Whatever is nameable is knowable, and *vice versa*.

For any inference the minimum condition is some kind of vyāpti between the middle and the major term. This satisfies the fundamental law of syllogistic inference that one of the premises must be universal. Now the vyāpti between the middle and the major term means generally a relation of co-existence (*sābhacarya*) between the two, e.g. "wherever there is smoke, there is fire." Every case of co-existence, however, is not a case of vyāpti. In many instances fire may co-exist with smoke. Still there is no vyāpti or universal relation between fire and smoke, since there may be fire without smoke. The reason is that in such cases the relation of co-existence is dependent on certain conditions (*upādhi*) other than the terms related. Thus the presence of smoke in fire is conditioned by wet fuel (*ārdrendhana*). So we are to say that vyāpti is that relation of co-existence between the middle and the major term which is independent of all conditions. It is an invariable and unconditional relation of concomitance (*nitya anaupādhika sambandha*) between the middle and the major term.

Vyāpti is an invariable and unconditional relation of concomitance between the middle and major terms.

The second question is: How is vyāpti known? How do we get a universal proposition like "all smoky objects are fiery," or "all men are mortal"? This is the problem of induction. For the Cārvākas, who are radical empiricists, there is no problem, because there is no inference as a source of true knowledge. All the

Different methods of ascertaining vyāpti.

other systems of Indian philosophy which admit the validity of inference try to solve this problem in some way or other.

The Buddhist method. The Buddhists base the knowledge of universal propositions on the principles of causality and essential identity, which they regard as *a priori* and necessary principles of human thought and action. If two things are related as cause and effect, we know that they are universally related, for there cannot be any effect without its cause. To determine the causal relation between them, the Buddhists adopt the method of *pañcakāraṇī* which is as follows: (a) neither the cause nor the effect is perceived, (b) the cause is perceived, (c) immediately, the effect is perceived, (d) the cause disappears, (e) immediately, the effect disappears. Similarly, if two things are essentially identical (*i.e.* possess a common essence), they must be universally related. All men are animals, because animality belongs to the essence of both, and men without animality will not be men.

The Vedāntins hold that *vyāpti* or the universal proposition is the result of an induction by simple enumeration. It is derived from the uncontradicted experience of agreement in presence between two things. When we find that two things go together or co-exist, and that there is no exception to their relation (*vyabhiçārādarsane sati sahaçārādarsanam*), we may take them as universally related.

The Naiyāyikas agree with the Vedāntins in holding that *vyāpti* is established by the uncontradicted experience of the relation between two things, and not on any *a priori* principle like causality or essential identity. They, however, go further than the Vedāntins and supplement uncontradicted experience of the relation between two facts by *tarka* or indirect proof and by *sāmānyalakṣaṇa* perception. The Nyāya method of induction or generalisation may be analysed into the following steps.

The Nyāya method which includes—

First we observe that there is a relation of agreement in presence (*anvaya*) between two things, or that in all cases in which one is present, the other also is present, *e.g.* wherever there is smoke, there is fire. Secondly, we

see that there is uniform agreement in absence (vyatireka)

(b) vyatireka, between them, e.g. wherever there is no fire, there is no smoke.

These two steps taken together correspond very well to Mill's Joint method of agreement in presence and in absence. Thirdly, we do not observe any contrary instance in which one of them is present

(c) vyabhicārāgraha, without the other (vyabhicārāgraha). From this we may conclude that there must be a natural relation of invariable concomitance between the two things.

Still we cannot be sure if the relation in question is unconditional or free from upādhis, which a real vyāpti must be. Hence the fourth step of the inductive method

(d) upādhinirāsa, is elimination of upādhis or conditions (upādhinirāsa). I put on the switch and there is light; if I do not, there is no light. From this if anybody concludes that there is a vyāpti or invariable relation between switching on and lighting the room, then he would commit the mistake of ignoring the upādhi or condition, viz. the electric current, in the presence of which alone there can be light. This upādhi, viz. electric current, must be present when there is light, but it may not be present wherever there is switching on. So an upādhi is defined as a term which is co-extensive with the major (sādhyaśamavyāpti) but not with the middle term of an inference (avyāptasādhana). Taking the stock example, when one infers the existence of smoke from fire, he relies on the conditional relation of fire to smoke, since fire is attended with smoke on the condition of its being fire from "wet fuel." It will be seen here that the condition "wet fuel" is always related to the major term "smoky," but not so related to the middle term "fire," as there are cases of fire without "wet fuel." Hence to eliminate the suspected conditions of an invariable relation between two things we must make repeated observation (bhūyodarśana) of their agreement in presence and in absence under varying circumstances. If in the course of this process

¹ The inference is like this: "Whatever is fiery is smoky. X is fiery, therefore X is smoky." Here the conclusion is contradicted by the red-hot iron ball, lightning, etc. The reason is that the relation of the middle "fiery" to the major "smoky" is conditional on its being fiery from "wet fuel."

we see that there is no material circumstance which is present or absent just when the major term is present or absent, we are to understand that its concomitance with the middle term is unconditional. In this way we can exclude all the suspected conditions of a relation of invariable concomitance between the middle and the major term and say that it is a relation of *vyāpti* or invariable and unconditional concomitance.

But there is still room for a sceptical doubt about the *vyāpti* or universal proposition thus arrived at. It may be urged by a sceptic like Hume or the *Cārvāka* that so far as our past and present experience is concerned, there is no exception to the uniform relation of concomitance between smoke and fire. But there is no knowing whether this relation holds good in distant regions, like the planets, or will hold good in the remote future. To end this sceptical doubt, the *Naiyāyikas* try next to fortify the induction by *tarka*. The proposition "all smoky objects are fiery"

(e) *tarka*, may be indirectly proved by a *tarka* like this: If this proposition is not true, then its contradictory, "some smoky objects are not fiery," must be true. This means that there may be smoke without fire. But this supposition is contradicted by the law of universal causation, for to say that there may be smoke without fire is just to say that there may be an effect without a cause (since fire is the only known cause of smoke). If any one has the obstinacy to say that sometimes there may be effects without causes, he must be silenced by reference to the practical contradictions (*vyāghāta*) involved in his position. If there can be an effect without a cause, why seek for fire to smoke your cigar or to cook your food? This process of indirect proof in the *Nyāya* may be said to correspond roughly to the method of *reductio ad absurdum* in Western logic.

Although the *Naiyāyikas* take great pains to establish *vyāpti* or a universal proposition on the ground of the observation of particular facts, still they feel that a generalisation from particulars as mere particulars cannot give us that certainty which we claim when we lay down a general proposition like "all men are mortal." The proposition "all crows are black" is not so certain as the proposition "all men are mortal." We find it less difficult

(f) *sāmānyalakṣaṇa* perception.

to think of a crow which is not black, than to think of a man who is not mortal. Just as a cuckoo may be black or grey and spotted, so crows may be black or dark, grey or brown. We cannot, however, seriously and honestly think of ourselves as immortal, and regulate our practical activities accordingly. Why this difference in the sense of security or certainty? The answer that naturally suggests itself, and that not unreasonably, is that while there is nothing in the nature of a crow to prevent it from being grey or brown, there seems to be something in the nature of man that makes him mortal. We say that all crows are black, not because they cannot be otherwise, but because they happen to be so, as far as we have seen. On the other hand, we say that all men are mortal because they are men, i.e. because they possess some essential nature, manhood, which is related to mortality. This becomes clear when we say that "A, B, C are mortal, not because they are A, B, C, but because they are men." It follows from this that an inductive generalisation must be ultimately based on the knowledge of the essential nature of things, i.e. the class-essence or the universal in them. Hence it is that the Naiyāyikas finally establish an induction by *sāmānyalakṣaṇa* perception.¹ They hold that a universal proposition like "all men are mortal," or "all smoky objects are fiery," must be due to the perception of the universal "manhood" as related to "mortality," or that of "smokeness" as related to "fireness." It is only when we perceive "manhood" as related to mortality that we can say that all men are mortal, for to perceive "manhood" is to perceive all men so far as they are *man-as-such*, and not this or that man. So we may say that the essence of induction is not an inference of the form "some men are mortal, therefore all men are mortal." This is not a logically valid inference, because there is an obvious illicit distribution of the subject term *men*. On the other hand, induction is a process of generalisation from the particulars of experience through the knowledge of the class-essences or universals underlying such particulars.²

¹ Vide *Muktāvalī*, p. 280; *Tattvacintāmaṇi*, ii, pp. 153-54.

² For a somewhat similar theory of induction the reader may be referred to R. M. Eaton, *General Logic*, Part IV. Vide *The Nyāya Theory of Knowledge*, Chaps. X, XII, for a fuller account.

(iv) The Classification of Inference

As we have seen before, inference is, in Indian logic, a combined deductive-inductive reasoning consisting of at least three categorical propositions. All inferences are thus pure syllogisms of the categorical type which are at once formally valid and materially true. Hence we have not here a classification of inferences into deductive and inductive, immediate and mediate, syllogistic and non-syllogistic, pure and mixed types. The Naiyāyikas give us three different classifications of inferences which we shall now consider.

According to the first classification, inference is of two kinds, namely, *svārtha* and *parārtha*. This is a psychological classification which has in view the use or purpose which an inference serves. An inference may be intended either for the acquisition of some knowledge on our part or for the demonstration of a known truth to other persons. In the first case we have *svārthānumāna* or inference for oneself. In the second, we have *parārthānumāna* or inference meant for others. The first is illustrated by a man who first perceives a mass of smoke in the hill, then remembers that there is a universal relation between smoke and fire, and finally infers that there is fire in the hill. On the other hand, an inference is *parārtha* when in making it a man aims at proving or demonstrating the truth of the conclusion to other men. This is illustrated when a man, having inferred or known the existence of fire in a hill, tries to convince

Inference is *svārtha* or *parārtha*, according as it is meant for oneself or for others.

another man who doubts or questions the truth of his knowledge, and argues like this: "The hill must be fiery; because it smokes; and whatever is smoky is fiery, e.g. the kitchen; so also the hill is smoky; therefore it is fiery."¹

According to another classification, we have three kinds of inferences, namely, *pūrvavat*, *śeṣavat* and *sāmānyatodṛṣṭa*.²

It is *pūrvavat* or *śeṣavat*, according as it passes from cause to effect, or from effect to cause.

This classification has reference to the nature of the *vyāpti* or universal

relation between the middle and major terms. While *pūrvavat* and *śeṣavat* inferences are based on causal uniformity, the last is based on non-causal uniformity. A cause is defined as the invariable and unconditional antecedent of an effect. Conversely, an effect is the invariable and unconditional consequent of a cause.³ Accordingly, a *pūrvavat* inference is that in which we infer the unperceived effect from a perceived cause, e.g. the inference of future rain from the appearance of dark heavy clouds in the sky. A *śeṣavat* inference is that in which we infer the unperceived cause from a perceived effect, e.g. the inference of past rain from the swift muddy current of the river. In these two kinds of inference, the *vyāpti* or universal relation between the middle and the major term is a uniform relation of causality between them. They are thus dependent on what is known as "scientific induction." In *sāmānyatodṛṣṭa* inference, however, the *vyāpti* or

¹ Vide *Tarkasaṅgraha*, pp. 46-49.

² Vide *Nyāya-sūtr.* and *Bhāṣya*, I.1.5.

³ Vide *Tarkabhāṣā*, p. 2; *Tarkasaṅgraha* and *Tattva-dīpikā*, pp.

universal relation between the middle and the major term does not depend on a causal uniformity. The middle term is related to the major neither as a cause nor as an effect. We infer the one from the other, not because

It is *sāmānyatodṛṣṭa* when based on certain observed points of general similarity between objects of experience.

we know them to be causally connected, but because they are uniformly related in our experience. This is illustrated when, on seeing the different positions of the moon at long intervals, we infer that it moves, although the motion might not have been perceived by us. In the case of other things whenever we perceive change of position, we perceive motion also. From this we infer motion in the moon, although the movement of the planet is not perceived. Similarly, we may infer the cloven hoof of an unknown animal simply by seeing its horns. These inferences depend not on a causal connection, but on certain observed points of general similarity between different objects of experience. *Sāmānyatodṛṣṭa* inference is thus similar to analogical argument.¹

A third classification gives us the three kinds of *kevalānvayi*, *kevalavyatireki* and

Inference is called *kevalānvayi* when based on a middle term which is always positively related to the major term.

anvayavyatireki inferences.² This classification is more logical, inasmuch as it is based on the nature of the induction by which we get the knowledge of *vyāpti*, on which inferences depend. An inference is called

kevalānvayi when it is based on a middle term which is

¹ According to another interpretation, *pūrvavat* inference is that which is based on previous experience of the concomitance between two things, and *śeṣavat* is *pariśeṣa* or inference by elimination, e.g. sound is a quality, because it cannot be a substance or an activity or anything else.

² Vide *Tarkasāgrika*, pp. 51-52 ; *Bhāṣāpariccheda* and *Muktāvalī*, 142-43.

always positively related to the major term. Hence the knowledge of vyāpti between the middle and the major term is arrived at only through the method of agreement in presence (anvaya), since there is no negative instance of their agreement in absence. This is illustrated by the following inference:

All knowable objects are nameable ;
The pot is a knowable object ;
Therefore the pot is nameable.

In this inference the major premise is a universal affirmative proposition in which the predicate "nameable" is affirmed of all knowable objects. It is not really possible for us to deny the predicate with regard to the subject and say that here is a knowable object which is not nameable, because we have at least to speak of it as "unnnameable." The minor premise and the conclusion of this inference are also universal affirmative propositions and cannot be otherwise. Hence, in its logical form, this inference is a syllogism of the first mood of the first figure, technically called Barbara.

A kevalavyatireki inference is that in which the middle term is only negatively related to the major term. It depends on a vyāpti between the absence of the major term and that of the middle term. Accordingly, the knowledge of vyāpti is here arrived at only through the method of agreement in absence (vyatireka), since there is no positive instance of agreement in presence between the middle and the major term excepting the minor term. This is illustrated thus by the Naiyāyikas:

It is kevalavyatireki when the middle term is only negatively related to the major.

What is not-different-from-other-elements has no smell ;
The earth has smell ;
Therefore the earth is different-from-other-elements.¹

In this inference the major premise is a universal negative proposition in which the predicate or the middle term "smell" is denied of the subject or the major term "what is not-different-from-other-elements." It is not pos-

¹ Another example of such inference would be : The sun is different from other planets, since it is stationary, and what is not different from the other planets is not stationary.

sible for us to affirm the predicate "smell" of any other subject excepting the earth which is the minor term of the inference. Hence the only way in which we can relate the middle to the major is the negative way of saying that "what is not different from the other elements has no smell." Hence the major premise is a universal negative proposition arrived at only through the method of agreement in absence between the major and the middle term. The minor premise is an affirmative proposition. But although one of the premises is negative, the conclusion is affirmative, which is against the general canons of the syllogism in Formal Logic. Hence we are to say that this inference is not any of the valid moods of syllogism recognized by Formal Logic, nor should we forcibly convert the conclusion into a negative proposition. But the validity of such inferences has been admitted by Bradley as a special case of negative reasoning.¹

An inference is called *anvayavyatireki* when its middle term is both positively and negatively related to the major term. In it there is a *vyāpti* or universal relation between the middle and the major term in respect of both their presence and absence. So the knowledge of the *vyāpti* or the universal proposition is based on the Joint method of agreement in presence (*anvaya*) and in absence (*vyatireka*). The universal proposition is affirmative when it is the result of the observation of positive instances of agreement in presence, and negative when based on the observation of negative instances of agreement in absence, between the middle and the major term. The difference between the universal affirmative and negative propositions (*anvaya* and *vyatireka vyāpti*) is that the subject of the affirmative proposition becomes predicate and the contradictory of the predicate becomes subject in the corresponding negative proposition. Hence *anvayavyatireki* inference may be based on both universal affirmative and universal negative propositions. It is illustrated in the following pair of inferences:

- (1) All smoky objects are fiery;
The hill is smoky;
Therefore the hill is fiery.

1 Cf. Bradley, *Principles of Logic*, Vol. I, pp. 274-82.

- (2) No non-fiery object is smoky;
The hill is smoky;
Therefore the hill is fiery.

(v) The Fallacies of Inference¹

The fallacies of inference (*hetvābhāsa*) in Indian logic are all material fallacies. So far as the logical form of inference is concerned, it is the same for all inferences. There is, strictly speak-

Fallacies in Indian logic are all material fallacies.

ing, no fallacious form of inference in logic, since all inferences must be put in one or other of the valid forms. Hence if there is any fallacy of inference, that must be due to the material conditions on which the truth of the constituent premises depends. It may be observed here that in the Aristotelian classification of fallacies into those in *dictione* and those *extra dictionem* there is no mention of the formal fallacies of inference like the undistributed middle, the illicit process of the major or minor term, and so forth. The reason for this, as Eaton² rightly points out, is that "to one trained in the arts of syllogistic reasoning, they are not sufficiently persuasive to find a place even among sham arguments." As for Aristotle's fallacies in *dictione*, i.e. those that occur through the ambiguous use of words, they are all included by the Naiyāyika among the fallacies of *chala*, *jāti* and *nigrahasthāna* with their numerous subdivisions.

In Indian logic, a fallacy is technically called *hetvābhāsa*, a word which literally means a *hetu* or reason

¹ Vide *Tarkasāgraha*, pp. 54-60. ² *General Logic*, p. 334.
98—(1180B)

which *appears* as, but really is not, a valid reason. The fallacies of inference being ultimately due to such fallacious reasons, the Naiyāyikas consider these only, and not such other fallacies as may infect the constituent propositions of the syllogism. According to the Naiyāyikas, there are five kinds

of fallacies. These are (1) Savyabhicāra, (2) Viruddha, (3) Satpratipakṣa, (4) Asiddha, (5) Bādhita.¹

The first kind of fallacy is called savyabhicāra or the irregular middle. To illustrate :

The first is called savyabhicāra or the irregular middle. All bipeds are rational;
Swans are bipeds;
Therefore swans are rational.

The conclusion of this inference is false. But why ? Because the middle term ' biped ' is not uniformly related to the major ' rational.' It is related to both rational and non-rational creatures. Such a middle term is called savyabhicāra or the irregular middle.

The savyabhicāra hetu or the irregular middle is found to lead to no one single conclusion, but to different opposite conclusions. This fallacy occurs when the ostensible middle term violates the general rule of inference, namely, that it must be universally related to the major term, or that the major term must be present in all cases in which the middle is present. The savyabhicāra middle, however, is not uniformly concomitant with the major term. It is related to both the existence and the non-existence of the major term, and is, therefore, also called *anaikāntika* or an inconsistent concomitant of the major term. Hence from such a middle term we can infer both the existence and the non-existence of the major term. To take another illustration :

All knowable objects are fiery;
The hill is knowable;
Therefore the hill is fiery.

¹ Vide *The Nyāya Theory of Knowledge*, Ch. XIV, for a detailed account of the fallacies.

Here the middle 'knowable' is indifferently related to both fiery objects like the kitchen, and fireless objects like the lake. All knowables being thus not fiery, we cannot argue that a hill is fiery because it is knowable. Rather, it is as much true to say that, for the same reason, the hill is fireless.

The second kind of fallacy is called *viruddha* or the contradictory middle. Take this inference: "Air is heavy, because it is empty." In this inference the middle term 'empty' is contradictory because it disproves the heaviness of air. Thus the *viruddha* or the contradictory middle is one which disproves the very proposition which it is meant to prove.

The second is *viruddha* or the contradictory middle.

This happens when the ostensible middle term, instead of proving the existence of the major in the minor, which is intended by it, proves its non-existence therein. Thus, to take the Naiyāyikas' illustration, if one argues, "Sound is eternal, because it is caused," we have a fallacy of the *viruddha* or contradictory middle. The middle term, 'caused' does not prove the eternality of sound, but its non-eternality, because whatever is caused is non-eternal. The distinction between the *savyabhicāra* and the *viruddha* is that while the former only fails to prove the conclusion, the latter disproves it or proves the contradictory proposition.

The third kind of fallacy is called *satpratipakṣa* or the inferentially contradicted middle.

This fallacy arises when the ostensible middle term of an inference is validly contradicted by some other middle term which proves the non-existence of the major term of the first inference. Thus the inference "sound is eternal, because it is audible" is validly contradicted by another inference like this: "sound is non-eternal, because it is produced like a pot." Here the non-existence of eternality (which is the major term of the first inference) is proved by the second inference with its middle term 'produced,' as against the first inference with its middle term 'audible.' The distinction between the *viruddha* and the *satpratipakṣa* is that, while in the former the middle itself proves the contradictory of its conclusion, in the latter the contradictory of the conclusion of one middle term is proved by another middle term.

The fourth kind of fallacy is called *asiddha* or *sādhya-sama*, i.e. the unproved middle. The

The fourth is *asiddha* or the unproved middle. *sādhya-sama* middle is one which is not yet proved, but requires to be proved, like the *sādhya* or the major term.

This means that the *sādhya-sama* middle is not a proved or an established fact, but an *asiddha* or unproved assumption. The fallacy of the *asiddha* occurs when the middle term is wrongly assumed in any of the premises, and so cannot be taken to prove the truth of the conclusion. Thus when one argues, "the sky-lotus is fragrant, because it has *lotusness* in it like a natural lotus," the middle has no *locus standi*, since the sky-lotus is non-existent, and is, therefore, *asiddha* or a merely assumed but not proved fact.

The last kind of fallacy is called *bādhita* or the non-inferentially contradicted middle. It is

The fifth is called *bādhita* or the non-inferentially contradicted middle. the ostensible middle term of an inference, the non-existence of whose major is ascertained by means of some other *pramāṇa* or source of knowledge.

This is illustrated by the argument: "Fire is cold, because it is a substance." Here 'coldness' is the *sādhya* or major term, and 'substance' is the middle term. Now the non-existence of coldness, nay more, the existence of hotness is perceived in fire by our sense of touch. So we are to reject the middle 'substance' as a contradicted middle. The fallacy of *satpratipakṣa*, as explained before, is different from this fallacy of *bādhita*, because in the former one inference is contradicted by another inference, while in the latter an inference is contradicted by perception or some other non-inferential source of knowledge. Another example of *bādhita* would be: Sugar is sour, because it produces acidity.

4. *Upamāna* or Comparison

Upamāna is the third source of valid knowledge

Upamāna is the process of naming objects through a given description.

accepted by the Nyāya. It is the source of our knowledge of the relation between a name and things so named or between a word and its

denotation (*sañjñāsañjñīsambandha*). We have such

knowledge when we are told by some authoritative person that a word denotes a class of objects of a certain description and then, on the basis of the given description, apply the word to some object or objects which fit in with that description, although we might not have seen them before. For example, a man, who does not know what a *gavaya*¹ or wild cow is, may be told by a forester that it is an animal like the cow. If subsequently he happens to meet with such an animal in the forest and knows or recognises it as a *gavaya*, then his knowledge will be due to *upamāna* or comparison.² A boy, who does not know what a jackdaw is, may be told by you that it is like a crow, but of bigger size and glazy black colour. When next he sees a jackdaw and says, 'this must be a jackdaw,' we know that he has learnt the denotation of the word. To take another example from Dr. L. S. Stebbing,³ suppose you do not know what "saxophone" means. You may be told by a musician: "A saxophone is a musical instrument something like a U-shaped trumpet." If, on subsequently seeing a saxophone, you are able to give its name, it will be clear that you understand what "saxophone" means. Now, *upamāna* is just this way of knowing the denotation of words, or the relation between names and the objects denoted by them.

¹ In some parts of India, the 'gavaya' is more commonly known as 'nilgai'.

² Vide *Tarkasāhgraha*, pp. 62-63.

³ *Modern Introduction to Logic*, p. 19.

That upamāna or comparison, as explained by the Naiyāyikas, is a distinct source of valid knowledge, has not been recognised in the other systems of Indian philosophy. The Cārvākas¹ contend that upamāna is not a pramāṇa at all, since it cannot give us any true knowledge about the denotation of words as maintained by the Naiyāyikas. The Buddhist logicians recognise upamāna as a form of valid knowledge, but they reduce it to perception and testimony, so that we do not require a separate source of knowledge like upamāna.² So also, the Vaiśeṣika³ and the Sāṅkhya⁴ system explain upamāna as a form of inference, and, therefore, neither a distinct type of knowledge nor an independent way of knowing. The Jainas⁵ reduce upamāna to *pratyabhijñā* or recognition. While recognising upamāna as a separate source of knowledge, the Mīmāṃsakas⁶ and the Vedāntins⁷ explain it in a different way which will be considered under the Mīmāṃsā.⁸

5. *Śabda or Testimony*

(i) The Nature and Classification of Śabda

Śabda is the last pramāṇa accepted by the Nyāya.

Śabda consists in understanding the meaning of the statement of a trustworthy person.

Literally śabda means verbal knowledge. It is the knowledge of objects derived from words or sentences. All verbal knowledge, however, is not valid. Hence

śabda, as a pramāṇa, is defined in the Nyāya as valid verbal testimony. It consists in the assertion of a

¹ Vide *Nyāya-sūtr.* and *Bhāṣya*, 2.1.42.

² Vide *Nyāya-dṛṣṭikā*, 1.1.6.

³ Vide *Tarkasaṅgraha* and *Dīpikā*, p. 68.

⁴ *Tattvakaumudī*, 5.

⁵ *Prameyaka-māla-mārtanḍa*, pp. 97-100.

⁶ *Sāstradīpikā*, pp. 74-76.

⁷ *Vedānta-Paribhāṣā*, Ch. III.

⁸ Vide *The Nyāya Theory of Knowledge*, Ch. XVI, for a critical discussion of upamāna as a distinct source of knowledge.

trustworthy person.² A verbal statement is valid when it comes from a person who knows the truth and speaks the truth about anything for the guidance of other persons.³ But it is a matter of common observation that a sentence or statement is not by itself sufficient to give us any knowledge of things. Nor again does the mere perception of the words of a sentence lead to any knowledge about objects. It is only when one perceives the words and *understands* their meanings that he acquires any knowledge from a verbal statement. Hence while the validity of verbal knowledge depends on its being based on the statement of a trustworthy person, its possibility depends on the understanding of the meaning of that statement. Hence śabda or testimony, as a source of valid knowledge, consists in understanding the meaning of the statement of a trustworthy person.⁴

There are two ways of classifying śabda or verbal knowledge. According to the one, there are two kinds of śabda, namely, that relating to perceptible objects (dṛṣṭārtha), and that relating to imperceptible objects (adrṣṭārtha).⁴ Under the first head we are to include the trustworthy assertions of ordinary persons, the saints and the scriptures in so far as they bear on the perceptible objects of the world, e.g. the evidence given by witnesses in law courts, the statements of a reliable farmer about plants, the scriptural

There are two ways of classifying śabda, which give us (a) dṛṣṭārtha and adrṣṭārtha;

² Nyāya-sūtr., 1.1.7.

³ Tārkikarākṣa, pp. 94-95.

⁴ Tarkasāggraha, p. 73; Bhāṣāpariccheda and Mukṭāvālī, 81.

⁴ Nyāya-sūtr. and Bhāṣya, 1.1.8.

injunctions to perform certain rites to bring about rain-fall, etc. The second will include all the trustworthy assertions of ordinary persons, saints, prophets and the scriptures in so far as they bear on supersensible realities, e.g. the scientists' assertions about atoms, ether, electrons, vitamins, etc., the prophets' instructions about virtue and vice, the scriptural texts on God, freedom and immortality.

According to another classification, there are two kinds of testimony, the scriptural (vaidika) and the secular (laukika).¹

(b) *laukika* and *vaidika śabda*. In *vaidika* testimony we have the words of God. *Vaidika* or scriptural testimony is thus perfect and infallible by its very nature. But *laukika* or secular testimony is not all valid. It is the testimony of human beings and may, therefore, be true or false. Of *laukika* testimony, only that which proceeds from trustworthy persons is valid, but not the rest. It will be observed here that the first classification of testimony (*śabda*) has reference to the nature of the objects of knowledge, the second to the nature of the source of knowledge. But the two classifications, given by different *Naiyāyikas*, agree in implying that testimony must always be personal, i.e. based on the words of some trustworthy person, human or divine. In respect of their truth, however, there is no difference among the trustworthy statements of an ordinary person, a saint, a prophet, and the scriptures as revealed by God.²

¹ *Tarkasamgraha*, p. 73; *Tarkabhāṣā*, p. 14.

² For a critical discussion of *śabda* as an independent source of knowledge, vide *The Nyāya Theory of Knowledge*, pp. 381-89.

(ii) The Logical Structure of a Sentence

Sabda or testimony, we have seen, gives us knowledge about certain things through the understanding of the meaning of sentences, either spoken or written by some authoritative person. Hence the question is: What is

a sentence and how does it become intelligible? A sentence, we are told, is a group of words (pada) arranged in a certain way. A word,

again, is a group of letters arranged in a fixed order.¹ The essential nature of a word lies in its meaning. A word is that which has a fixed relation to some object, so as to recall it whenever it is heard or read, i.e. it means an object. So we may say that words are significant symbols. This capacity of words to mean their respective objects is called their *śakti* or potency, and it is said to be due to the will of God.² That a word has a fixed and an unalterable relation to certain things only, or that this word always means this object and not others, is ultimately due to the Supreme Being who is the ground and reason of all the order and uniformity that we find in the world.

A sentence (vākya) is a combination of words having a certain meaning. Any combination of words, however, does not make a significant sentence. The construction of an intelligible sentence must conform to four conditions. These are *ākāṅkṣā*, *yogyatā*, *sannidhi* and *tātparyā*.³

By *ākāṅkṣā* or expectancy is meant that quality of the words of a sentence by which they expect or imply one another. Generally speaking, a word cannot by itself convey a complete meaning. It must be brought into relation with other words in order to express a full judgment. When one hears the word 'bring,' he at once asks: 'what?' The verb 'bring' has a need for some other words denoting some object or objects, e.g. 'the jar.' *Ākāṅkṣā* is

¹ *Tarkasaṃgraha*, pp. 63-64.

² *Ibid.*, p. 64.

³ *Ibid.*, p. 72; *Bhāṣāpariccheda*, 89.

this mutual need that the words of a sentence have for one another in order to express a complete sense.

The second condition of the combination of words in a sentence is their *yogyatā* or *mutual fitness*. It consists in the absence of contradiction in the relation of objects denoted by a sentence. When the meaning of a sentence is not contradicted, there is *yogyatā* or fitness between its constituent words. The sentence 'moisten with fire' is faulty of unfitness, because there is a contradiction between 'fire' and 'moistening.'

Sannidhi or *āsatti* is the third condition of verbal knowledge. It consists in the juxtaposition or *proximity* between the different words of a sentence. If there is to be an intelligible sentence, then its constituent words must be continuous with one another in time or space. Spoken words cannot make a sentence when separated by long intervals of time. Similarly, written words cannot construct a sentence when they are separated by long intervals of space. Thus the words 'bring—a—cow' will not make a sentence when uttered on three days or written on three pages, even though they possess the first two marks of *ākāṅkṣā* or expectancy and *yogyatā* or fitness.

Tātparya as a condition of verbal knowledge stands for the meaning intended to be conveyed by a sentence. A word may mean different things in different cases. Whether it means this or that thing in a particular case depends on the intention of the person who uses the word. To understand the meaning of a sentence, therefore, we must consider the intention of the writer or the speaker who uses it. Thus when a man is asked to bring a 'bat,' he is at a loss to understand whether he is told to bring a particular kind of animal or a wooden implement, for the word means both. This can be ascertained only if we know the intention of the speaker. Hence the understanding of a sentence depends on the understanding of its *tātparya* or intended meaning. In the case of ordinary sentences used by human beings, we can ascertain their *tātparya* from the context (*prakaraṇa*) in which they are used. For the understanding of the Vedic texts we are to take the help of the

logical rules of interpretation systematised by the *Mīmāṃsā*.

III. THE NYAYA THEORY OF THE PHYSICAL WORLD¹

So far we have considered the Nyāya doctrine of

pramāṇa or the methods of know-
ledge. Now we come to the second
topic of *prameya* or the objects of

knowledge. According to the Naiyāyikas, the objects of knowledge are the self, the body, the senses and their objects, knowledge, mind (*manas*), *pravṛtti* or activity, *doṣa* or the mental imperfections, *pretyabhāva* or rebirth, *phala* or the feelings of pleasure and pain, *duḥkha* or suffering, *apavarga* or absolute freedom from all suffering. There are also such objects as *dravya* or substance, *guṇa* or quality, *karma* or motion, *sāmānya* or the universal, *viśeṣa* or particularity, *samavāya* or the relation of inherence, and *abhāva* or non-existence.

All of these *prameyas* or knowables are not to be found in the physical world, because it includes only those objects that are either physical (*bhūta*) or somehow belong to the world of physical nature. Thus the self, its attribute of knowledge and *manas* are not at all physical. Time and space are two substances which, although different from the physical substances, yet somehow belong to the physical world. *Ākāśa* is a physical substance which is not a productive cause of anything. The physical world is constituted by the four physical substances of

Of these, the physical elements—time, space and *ākāśa*—constitute the physical world.

¹ *Vide Nyāya-sūtr. and Bhāṣya*, I. 1. 9-22.

earth, water, fire and air. The ultimate constituents of these four substances are the eternal and unchanging atoms of earth, water, fire and air. Ākāśa or ether, kāla or time, and dik or space are eternal and infinite substances, each being one single whole. Thus the physical world is the product of the four kinds of atoms of earth, water, fire and air. It contains all the composite products of these atoms, and their qualities and relations, including organic bodies, the senses, and the sensible qualities of things. To it belong also the physical substance of ākāśa or ether, and the non-physical substances of kāla or time and dik or space with all their various relations and apparent modifications. The Nyāya theory of the physical world, in respect of these and other connected subjects, is the same as that of the Vaiśeṣika. The Vaiśeṣika theory, which is a more detailed account of the subject, is accepted by the Nyāya as *samānatānta* or an allied theory common to the Nyāya and the Vaiśeṣika system. So we propose to take up this subject when we come to the Vaiśeṣika philosophy.

IV. THE INDIVIDUAL SELF AND ITS LIBERATION

The Nyāya is a philosophy of life and seeks to guide individual selves in their search for truth and freedom. With regard to the individual self (*jīvātmā*) we have to consider first its nature and attributes. There are four main views of the self in Indian philosophy. According to the Cārvākas, the self is the living body with the attribute of consciousness.

Different conceptions of the self: materialistic, empiricist and idealistic.

This is the materialistic conception of the self. The Bauddhas reduce the self to a stream of thought or a series of cognitions. Like some empiricists and sensationists, they admit only the empirical self. The Advaita Vedānta takes the self as one, unchanging and self-shining intelligence (svaprakāśa caitanya) which is neither a subject nor an object, neither the 'I' nor the 'me.' The Viśiṣṭādvaita Vedānta, however, holds that the self is not pure intelligence as such, but an intelligent subject called the ego or the 'I' (jñātā abamartha evātmā). Both these views of the self may be called idealistic in a broad sense.

The Nyāya-Vaiśeṣikas adopt the realistic view of the self. According to them, the self is a unique substance, to which all cognitions, feelings and conations belong as its attributes. Desire, aversion and volition, pleasure, pain and cognition are all qualities of the soul. These cannot belong to the physical substances, since they are not physical qualities perceived by the external senses. Hence we must admit that they are the peculiar properties of some substance other than and different from all physical substances. There are different selves in different bodies, because their experiences do not overlap but are kept distinct. The self is indestructible and eternal. It is infinite or ubiquitous (vibhu), since it is not limited by time and space.¹

¹ Nyāya-bhāṣya, I.1.10; *Podārthadharmasamgraha*, pp. 30 f.; *Tarka-bhāṣā*, pp. 18-19.

The body or the senses cannot be the self because consciousness cannot be the attribute of the material body or the senses. The body is, by itself, unconscious and unintelligent. The senses cannot explain functions like imagination, memory, ideation, etc., which are independent of the external senses. The manas too cannot take the place of the self. If the manas be, as the Nyāya-Vaiśeṣikas hold, an atomic and, therefore, imperceptible substance, the qualities of pleasure, pain, etc., which should belong to the manas, must be equally imperceptible. But pleasure and pain are experienced or perceived by us. Nor can the self be identified with the series of cognitions as in Bauddha philosophy, for then memory becomes inexplicable. No member of a mere series of cognitions can, like a bead of the rosary, know what has preceded it or what will succeed it. The Advaita Vedāntin's idea of the self as eternal self-shining intelligence is no more acceptable to the Naiyāyika than that of the Buddhists. There is no such thing as pure intelligence unrelated to some subject and object. Intelligence cannot subsist without a certain locus. Hence the self is not intelligence as such, but a substance having intelligence as its attribute. The self is not mere consciousness or knowledge, but a knower, an ego or the 'I' (*ahaṅkāśraya*), and also an enjoyer (*bhoktā*).¹

¹ *Bhāṭṭāpariccheda* and *Muktāvahī*, 48-50; *Nyāya-sūtr.* and *Bhāṭṭya*, 3.1.4 ff.

Although knowledge or consciousness belongs to the self as an attribute, yet it is not an essential and inseparable attribute of it. All cognitions or conscious states arise in the self when it is related to the manas, and the manas is related to the senses, and senses come in contact with the external objects. Otherwise, there will be no consciousness in the self. In its disembodied condition, therefore, the self will have no knowledge or consciousness. Thus the attributes of cognition, feeling and conation—in a word, consciousness—is an accidental attribute of the self, the accident being its relation to the body.¹

Consciousness is not an essential attribute of the soul-substance.

How do we know that there is any self of the individual, which is distinct from his body, his senses and his mind? Some old Naiyāyikas² seem to think that there cannot be a perception or direct cognition of the self. According to them, the self is known either from the testimony of spiritual authorities or by inference from the functions of desire, aversion and volition, the feelings of pleasure and pain, and the phenomenon of knowledge in us. That we have desire, aversion, etc., nobody can doubt. But these cannot be explained unless we admit a permanent self. To desire an object is to strive to obtain it as something pleasurable. But before we obtain it, we cannot get any pleasure out of it. So in desiring the object we only judge it to be similar to such objects as were found to be pleasurable in the past. This means that desire supposes some permanent self which had experienced pleasure in relation to certain objects in the past and which considers a present object to be similar to any of those past objects, and so strives to get possession of it. Similarly, aversion and volition cannot be explained

Proofs for the existence of the self.

¹ *Vārttika*, 1. 1. 22; *Nyāyamañjarī*, p. 432.

² *Vide Nyāya-bhāṣya*, 1. 1. 9-10.

without a permanent self. The feelings of pleasure or pain also arise in an individual when he gets something considered to be the means of attaining a remembered pleasure, or gets into something which had previously led to a painful experience. So too knowledge as a process of reflective thinking requires a permanent self which first desires to know something, then reflects on it, and finally attains certain knowledge about it. All these phenomena of desire, etc., cannot be explained either by the body or the senses or the mind as a series of cognitions or a stream of consciousness. Just as the experience of one man cannot be remembered by another man, so the body or the senses which are really series of different physiological states and stages, and the mind or the empirical self, which is admittedly an aggregate of different momentary psychical states and processes, cannot explain the phenomena of desire, aversion and volition, pleasure, pain and cognition.¹

The later Naiyāyikas go a step further and maintain that the self is directly known through internal or mental perception (*mānasapratyakṣa*). Of course, when its existence is denied or doubted by any one, the self must be inferred and proved in the way explained above. The mental perception of the self may take either of two forms. It may be a perception in the form of pure self-consciousness, which is due to a contact between the mind and the pure self, and is expressed in the judgment 'I am.' According to some Naiyāyikas, however, the pure self cannot be an object of perception. The self is perceived only through some such quality of it as cognition, feeling or willing, and so the perceptual judgment is in the form, 'I am knowing,' 'I am happy,' and so forth. We do not perceive the self as such, but as knowing or feeling or doing something. Hence self-consciousness is a mental perception of the self as present in some mode of consciousness. While one's own self can be perceived, other selves in other bodies can only be inferred from their intelligent bodily actions, since these cannot be explained by the unintelligent body and require a conscious self for their performance.²

¹ *Vide Bhāṣya*, I, 1. 10.

² *Vide Tarkabhāṣā*, p. 6; *Tarkakaumudī*, p. 8; *Bhāṣāpariccheda* and *Mukṛdāra*, 49-50.

The end of almost all the systems of Indian philosophy is the attainment of *mukti* or liberation for the individual self. This is especially true

Liberation is freedom from all pain and suffering.

of the Nyāya system which proposes, at the very outset, to give us a knowledge of reality or realities for the realization of the highest good or the *summum bonum* of our life. The different systems, however, give us different descriptions of this consummate state of the soul's existence. For the Naiyāyikas it is a state of negation, complete and absolute, of all pain and suffering. *Apavarga* or liberation is absolute freedom from pain. This implies that it is a state in which the soul is released from all the bonds of its connection with the body and the senses. So long as the soul is conjoined with a body, it is impossible for it to attain the state of utter freedom from pain. The body with the sense organs being there, we cannot possibly prevent their contact with undesirable and unpleasant objects, and so must submit to the inevitable experience of painful feelings. Hence in liberation, the soul must be free from the shackles of the body and the senses. But when thus severed from the body,

In it the self ceases to have any experience, painful or pleasurable, and exists as a pure substance devoid of consciousness.

the soul ceases to have not only painful but also pleasurable experiences, nay more, it ceases to have any experience or consciousness. So in liberation the self exists as a pure substance free from all connection with the body, neither suffering pain, nor enjoying pleasure, nor having consciousness even. Liberation is the negation of pain, not in the sense of a suspen-

sion of it for a longer or shorter period of time, as in a good sleep or a state of recovery from some disease or that of relief from some bodily or mental affliction. It is absolute freedom from pain for all time to come. It is just that supreme condition of the soul which has been variously described in the scriptures as 'freedom from fear' (abhayaṃ), 'freedom from decay and change' (ajaram), 'freedom from death' (amṛtyupadam),¹ and so forth.¹

To attain liberation one must first listen to the scriptural instructions about the self (śravaṇa). Then, he should firmly establish the knowledge of the self by means of reasoning (manana). Finally, he must meditate on the self in conformity with the principles of yoga (nididhyāsana). These help him to realize the true nature of the self as distinct from the body. With this realization, the wrong knowledge that 'I am the body and the mind' is destroyed, and one ceases to be moved to action by passions and impulses. When a man becomes thus free from desires and impulses, he ceases to be affected by the effects of his present actions, done with no desire for fruits. His past karmas or deeds being exhausted by producing their effects, the individual has to undergo no more birth in this world. The cessation of birth means the end of its connection with the body and, consequently, of all pain and suffering ; and that is liberation.²

¹ Vide *Bhāṣya*, 1, 1. 22.

² Cf. *Tarkasaṅgraha* and *Dīpikā*, pp. 106-67

V. THE NYĀYA THEOLOGY

It is by no means true to say that the Nyāya and the Vaiśeṣika sūtra make no mention of God.¹ We do find short references to the Divine Being in both the sūtras.² The later Naiyāyikas give us an elaborate theory of God and connect it with the doctrine of liberation. According to these Naiyāyikas, the individual self can attain true knowledge of realities and, through it, the state of liberation only by the grace of God. Without God's grace neither the true knowledge of the categories of philosophy nor the highest end of liberation is attainable by any individual being of the world. So the questions that arise are: What is God? How do we know that God exists?

Reference to God in the Nyāya and Vaiśeṣika sūtras.

1. *The Idea of God*

God is the ultimate cause of the creation, maintenance and destruction of the world. He does not create the world out of nothing, but out of eternal atoms, space, time, ether, minds (manas) and souls. The creation of the world means the ordering of the eternal entities, which are coexistent with God, into a moral world, in which individual selves enjoy and suffer according to the merit and demerit of their actions, and all physical objects serve as means to the moral and spiritual ends of our

God is the eternal infinite self who creates, maintains and destroys the world.

¹ Vide Hiriyanna, *Outlines of Indian Philosophy*, p. 242.

² Vide Nyāya-sūt., 4. 1. 19-21; Vaiśeṣika-sūt., 2. 1. 17-19.

life. God is thus the creator of the world in the sense of being the first efficient cause of the world and not its material cause, *i.e.* a sort of demiurgus or a builder of the ordered universe. He is also the preserver of the world in so far as the world is kept in existence by the will of God. So also He is the destroyer who lets loose the forces of destruction when the exigencies of the moral world require it. Then, God is one, infinite and eternal, since the world of space and time, minds and souls does not limit Him, but is related to Him as a body to the self which resides in it. He is omnipotent, although He is guided in His activities by moral considerations of the merit and demerit of human actions. He is omniscient in so far as He possesses right knowledge of all things and events. He has eternal intelligence as a power of direct and steadfast cognition of all objects. Eternal intelligence is only an inseparable attribute of God, and not His very essence as maintained in the Advaita Vedānta. He possesses to the full all the six perfections (*ṣaḍaiśvaryya*) and is majestic, almighty, all-glorious, infinitely beautiful, and possessed of infinite knowledge and perfect freedom from attachment.¹

Just as God is the efficient cause of the world, so He

He is also the moral governor of all living beings including ourselves.

is the directive cause of the actions of all living beings. No creature, not even man, is absolutely free in his actions. He is relatively free, *i.e.* his actions are done by him under the direction and guidance of the Divine Being. Just as a wise and benevolent father

¹ Vide *Śaḍdarśana*., Ch. I; *Kuṣumāñjali*, 5.

directs his son to do certain things, according to his gifts, capacities and previous attainments, so God directs all living beings to do such actions and feel such natural consequences thereof as are consistent with their past conduct and character. While man is the efficient instrumental cause of his actions, God is their efficient directive cause (*prayojaka-kartā*). Thus God is the moral governor of the world of living beings including ourselves, the impartial dispenser of the fruits of our actions (*karmaphaladātā*), and the supreme arbiter of our joys and sorrows.¹

2. *Proofs for the Existence of God*

Now the more important question which naturally arises here is this: What are the proofs for the existence of God? The Nyāya-Vaiśeṣikas have to their credit an array of proofs which include almost all the arguments given in Western philosophy for God's existence. There are as many as ten proofs, of which the more important may be considered here.

(i) *The Causal Argument*

All composite objects of the world, formed by the combination of atoms (*e.g.* mountains, seas, etc.) must have a cause, because they are of the nature of effects, like a pot. That all such objects of the world are effects follows first from their being made up of parts (*sāvayava*) and, secondly, from their possessing an intermediate magnitude (*avāntaramahattva*).

All composite and limited objects of the world must have an intelligent maker who is omnipotent and omniscient, and that maker is God.

¹ Vide *Nyāya-bhāṣya*, 4. 1. 21.

Space, time, ether and self are not effects, because these are infinite substances, not made up of parts. Atoms of earth, water, light and air, and the mind are not the effects of any cause, because they are simple, indivisible and infinitesimal substances. All other composite objects of the world, like mountains and seas, the sun and the moon, the stars and the planets, must be the effects of some cause, since they are both made up of parts and possess medium dimensions. These objects are what they are because of the concurrence of a number of material causes. Therefore, there must be an intelligent cause (kartā), for all these effects. Without the guidance of an intelligent cause the material causes of these things cannot attain just that order, direction and co-ordination which enable them to produce these definite effects. This intelligent cause must have a direct knowledge of the material causes (the atoms) as means, a desire to attain some end, and the power of will to accomplish or realize the end (jñāna-cikīrṣū-kṛti). He must also be omniscient (sarvajña), since only an omniscient being can have direct knowledge of such absolutely simple and infinitely small entities as atoms and the like. That is, He must be God and none but God. ¹

The first argument of the Naiyāyikas, it will be

observed, resembles the causal argument for God's existence as explained by some Western thinkers like Paul Janet, ² Hermann Lotze ³ and James

A comparison of the Naiyāyika's causal argument with that of Western theologians.

¹ Vide *Kusumāñjali*, 5; *Sarvadarśana*, Ch. XI; *Tarkasaṅgraha* and *Dīpikā*, pp. 21-22.

² Vide *Final Causes*, Bk. I, Ch. I.

³ Vide *Outlines of a Philosophy of Religion*, Chs. I, II.

Martineau.¹ According to them, the world of finite objects requires an intelligent cause which gives order and co-ordination to their concurrent physical causes. Thus Janet lays it down as a principle that all co-ordination between divergent phenomena implies a final cause or an intelligent agent who effects the complex combination of such separate phenomena. So also, both Lotze and Martineau start from the fact of physical causation in the world and rise up to the conception of an intelligent principle as its ultimate ground and reason. Indeed, the Naiyāyika view of cause as an intelligent agent strikingly anticipates Martineau's idea of cause as will directed to the realization of ends. There is, however, some difference between these theists and the Naiyāyikas. Western theists generally believe that God is not only the cause of the order and unity of things in the world, but also the creative energy that gives existence to the things of Nature. For the Naiyāyikas, however, God is only the cause of the order of Nature, and not of the existence of the ultimate constituents of it.

(ii) The Argument from Adṛṣṭa

The second argument of the Naiyāyikas is this. The question here is: How are we to account for the differences in our lot here on earth? Some people are happy and some miserable, some wise and some ignorant. What may be the cause of all these variations in our worldly life? We cannot say that they have no causes, because these are so many events in our life, and every event must have its cause. Now the causes which produce our joys and sorrows in this life are our own actions in this or some previous life. We enjoy or suffer in this life because of our good or bad actions. The law that governs the lives of individual souls is the moral law of karma which requires that every individual being must reap the fruits of its own actions, good or bad, right or wrong. There is nothing strange or improbable in this. It follows logically from the law of universal causation, which means that every cause must produce its effect and every effect must be produced by

The differences in our lot require an explanation which must be given in terms of our good or bad deeds.

¹ Vide *A Study of Religion*, Bk. II, Ch. I.

its cause. That our moral actions are as good causes as our physical actions must be admitted by every one who believes in the law of causation and extends it to the moral world. Just as bodily acts produce bodily changes, and mental functions produce mental changes and dispositions, so morally good or bad actions lead to good or bad moral consequences, such as reward or punishment, happiness or misery. Hence it is established that our joys and sorrows are due to our own actions.¹

But the next question is: How do our moral actions produce their consequences which may be separated from them by long intervals of time? Many of our joys and sorrows cannot be traced to any work done by us in this life. Even those that are due to acts done in this life, do not arise out of them immediately, but after some time. A sinner in the heyday of youth may be a sufferer in the infirmity of old age. So it is maintained that our good actions produce a certain efficiency called merit (*punya*), and bad actions produce some deficiency called demerit (*pāpa*) in our souls, and these persist long after our actions have ceased and disappeared. This stock of merit and demerit accruing from good and bad actions is called *adrṣṭa*. There is nothing more mysterious in the concept of *adrṣṭa* than in those of virtue and vice. Just as good actions have a purifying, so bad actions have a corrupting effect on our minds. And just as virtue conduces to a sense of security, serenity and peace (in a word, happiness), so vice plunges the mind into the ruffled waters of suspicion, distraction

¹ If the world be created by God, who is not only omnipotent but also morally perfect, it is not unreasonable to think that good actions must produce good effects and bad actions must produce bad effects in our lives. If God is both the creator and moral governor of the world, it logically follows that human beings are responsible to God for their actions. It follows also that our actions are judged by God as good or bad, right or wrong, according as they do or do not help us to realize the end of our life, or to perform our own duties to God and man. And from this it is but natural and rational to conclude that God rewards us for our good acts and punishes us for bad ones. In other words, in a world created by God, good actions must lead to good results and evil actions must not fail to lead to evil consequences.

and uneasiness (in a word, unhappiness). In the same way, *adrṣṭa*, as the sum total of merit and demerit accruing from our past actions, produces our present joys and sorrows.

But how is it that *adrṣṭa* manages to produce the proper consequences? It is an unintelligent

But *adrṣṭa* being an unintelligent principle requires to be guided by a supremely wise person, namely, God.

principle which cannot by itself lead to just that kind and degree of joy and sorrow which are due to our past actions. So it is argued that *adrṣṭa* must be guided by some intelligent agent to produce its proper consequences. Individual selves cannot be said to direct or control *adrṣṭa*, for they do not know anything about their *adrṣṭa*, and further, it is not infrequently that *adrṣṭa* defies the control of their will. So the intelligent agent, who guides *adrṣṭa* through the proper channels to produce the proper effects, is the eternal, omnipotent and omniscient Divine Being. It is God who controls our *adrṣṭa*, and dispenses all the joys and sorrows of our life, in strict accordance with it. Or, as Kant would say, it is God who combines happiness with virtue and misery with vice. God gives us the fruits of our actions in the shape of enjoyments or afflictions in a way similar to that in which a wise and potent monarch rewards or punishes his subjects according to the merit or guilt attaching to their good or bad actions.¹

(iii) The Argument from the Authoritativeness of the Scriptures

Another argument for God's existence is based on the authoritative character of the Vedas.

The scriptures (Vedas) are valid and authoritative texts. This is due to the supreme authority of their author who must be omniscient, and so none other than God.

The authority of the scriptures is accepted as unquestionable and infallible in all religions. Now the question, we are to consider here, is this: What is the source of the authority of the Vedas? According to the Naiyāyikas, the authority (prāmānya) of the Vedas has its source in the supreme authority of their author (āptaprāmānya). Just as the authoritativeness of the medical science, or for the matter of that, of all sciences, is derived from the scientists who

¹ Vide *Kaumārājali*, 1.

founded them, so the authoritativeness of the Vedas is derived from some person who imparted that character to them. The validity of the Vedas may be tested like that of any science, by following their injunctions about worldly objects and seeing how they produce the desired results. Of course, the truth of other Vedic texts bearing on supersensible objects cannot, like some scientific truths, be tested in this way. Still, we may accept the whole of the Vedas as valid and authoritative, in the same way in which we accept the whole of a science as true when, as a matter of fact, we can verify only some parts of it. So we must explain the authority of the Vedas by referring them to some authoritative person. Now the individual self (jīva) cannot be the author of the Vedas, since the supramundane realities and the transcendent principles related in the Vedas cannot be objects of the knowledge of any ordinary individual. Hence the author of the Vedas must be the supreme person who has a direct knowledge of all objects, past, present and future, finite, infinite and infinitesimal, sensible and supersensible. That is, the Vedas, like other scriptures, are revealed by God.¹

(iv) The Testimony of Śruti

Another proof of God's existence is this: God exists, because the Vedic scripture (śruti)

The śruti bears testimony to the existence of God.

bears testimony to His existence. Here are some of the scriptural texts: "The highest eternal self is the Lord of all, the ruler of all, the protector of all...." "The great unborn spirit is the receiver of all offerings and the giver of all gifts."² "The one God lies hidden in all, is all-pervading, is the inmost self of all and the controller and sustainer of all."³ "He is the ruler of all selves and the creator of the world."⁴ In the *Bhagavadgītā* also, the Lord says: "I am the Father and the Mother of this world, its Foster-parent, and its eternal and immutable God." "I am the highest end of all, the maintainer of all, the controller of all, the witness of all, the abode of all, the shelter of all, the friend of all, the

¹ *Ngāya-bhāṣya*, 2. 1. 68; *Kuṣumāṅjali*, 5, p. 62.

² *Bṛhadāraṇyaka Upaniṣad*, 4. 4. 22, 4. 4. 24.

³ *Svetāśvatara Upaniṣad*, 6. 11.

⁴ *Kauṣītaki Upaniṣad*, 4. 18.

creator of all, the destroyer of all, the substratum of all, and the unchanging ground of the origin and destruction of all." ¹

It will appear from the above that the śruti or the scripture bears unmistakable testimony to the existence of God. But the question that may

But why should one accept the testimony of the scripture on this point?

agitate the mind of the reader, is: Why should one believe in God simply on the authority of the scriptures? A religious man may be inclined to do

so, because he has not the spirit of critical enquiry in him. But a critical philosopher may say that scriptural testimony has no importance for philosophy, which is satisfied with nothing short of logically valid arguments in the attainment of true knowledge about anything, human or divine. So long as these are not forthcoming, the appeal to authority is of no avail. It may also be thought that such logical support for the belief in God is afforded by the traditional proofs of God's existence. But as Immanuel

An examination of the so-called proofs for God's existence shows that God cannot be proved in any way, for all proofs presuppose the reality of God as spirit.

Kant ² and, after him, Hermann Lotze ³ have clearly shown, none of the so-called proofs can really prove the existence of God. To prove anything is to deduce it as a necessary conclusion from certain given premises. But God being the highest of all premises, i.e. the ultimate reality,

there cannot be any anterior premise or premises from which we can deduce God as a conclusion. The ontological proof starts from the idea of the most perfect being and infers its existence on the ground that without existence it would not be most perfect. So, the cosmological argument starts from the sensible world as a finite and conditioned reality, and argues to the existence of an infinite, unconditioned and supersensible reality as the ground thereof. Similarly, the teleological proof lays stress on the adaptation of means to ends which we find everywhere in nature and infers the existence of an infinitely intelligent creator of the world. But all these proofs are vitiated by the fallacy of deducing the existence of God from the mere idea of Him. The idea of the most perfect

¹ *Bhagavadgītā*, 9. 17-18.

² *Vide E. Caird, The Critical Philosophy of Kant*, Vol. II, Ch. XIII.

³ *Vide The Outlines of a Philosophy of Religion*, Ch. I.

being may involve the idea of existence, but not actual existence. just as the thought of one hundred rupees in my pocket involves the image or the idea of their existence, but not their real physical existence. So, to think of the conditioned world we have to think of the unconditioned, or to explain the adaptation of things we have to think of an intelligent cause. But to think of the existence of something is not to prove its existence, since the *thought of existence* is not actual existence.

The conclusion to be drawn from all this is that the existence of God cannot be proved by any argument. In

Experience is the only source of our knowledge about fact or existence.

truth, mere reasoning or logical argument cannot prove the existence of anything. The existence of a thing is to be known, if at all, through experience, direct or indirect. A man

of normal vision may indirectly know what orange colour is, if he has seen red and yellow, but no orange as yet. But a man who is born blind can never know what colour is, however much he may argue and reason logically. If by some surgical operation, the man is blessed with the power of vision, a single glance at some coloured objects shall reveal to him the world of colours. Lotze¹ told us the truth about our knowledge of God when he said: "Therefore, all proofs that God exists are pleas put forward in justification of our faith and of the particular way in which we feel that we must apprehend this highest principle." This point becomes more clear when in his criticism of Anselm's form of the ontological proof, he observes: "To him (Anselm) the assumption that it (God) does not exist seemed to conflict with that *immediate conviction* of its reality, which all our theoretic, aesthetic, and moral activities constrain our souls to entertain." "Although," he goes on to say, "weak enough as a proof, Anselm's argument expresses an *immediate fact* about our minds, namely that *impulse which we experience towards the supersensuous*, and that

God's existence must be known through direct experience, and not by means of reasoning.

of reasoning. If there is this direct experience, no proof is

faith in its truth which is the starting-point of all religion." It becomes abundantly clear from all this that God must be known through direct experience and not through any process

¹ *Op. cit.*, pp. 9, 12 (*italics ours*).

necessary, just as no reasoning is needed to convince you that you are now reading this book. If there is no direct experience of God, we may pile up proof after proof and yet remain as unconvinced as ever with regard to the existence of God.

For the knowledge of God or of any supersensuous reality, those who have no direct ex-

Those who have no direct experience of God, must depend, for their knowledge about God, on others who have that direct experience. The śruti being the expression of such direct experience of God is a just source of our belief in God.

perience must depend on the authority of those rare blessed souls who are pure in heart and have seen God, like the Upaniṣadic seers and the Christian saints. So, śruti or the scripture, being the embodiment of the knowledge imparted by the enlightened sages and seers of God, may be accepted as a source of right knowledge about God. Just as the great scientists and their sciences

have been, for all ages, the source of our knowledge of many scientific truths, so the Vedas and Upaniṣads (śruti) constitute a just ground of our belief in one universal spiritual truth, i.e. God.¹

3. Anti-theistic Arguments

It may be objected here that the last two proofs given

The charge of arguing in a circle against the last two proofs is answered.

above involve us in the fallacy of reasoning in a circle. In the third proof, it is shown that God is the author of the Vedas, while in the fourth, the Vedas are exhibited as the ground of our knowledge of God. It appears, therefore, that we prove God's existence from the Vedas and that of the Vedas by the revelation of God. But that there is really no circular reasoning here becomes clear when we distinguish between the order of *knowledge* and the order of *existence*. In the order of existence, God is first and creates the Vedas, imparting to them their authoritative character. In the order of knowledge, however, the Vedas come first, and we rise from them to a knowledge of God. But for our knowledge of the Vedas, we need not be necessarily and absolutely dependent on God, since these may be learned from an eligible and efficient teacher.

¹ Cf. *Kusumāñjali*, 5.

All reciprocal dependence is not reasoning in a circle. It is only when there is reciprocal dependence with reference to the same order or within the same universe of discourse, that there arises the fallacy of reasoning in a circle. In the present case, however, the Vedas depend on God for their existence but not for their knowledge, while God depends on the Vedas for our knowledge of Him but not for His existence. So there is really no fallacy of reasoning in a circle.¹

Another objection to the Nyāya theory of God is this:

Reply to the second objection. If God be the creator of the world, He must have a body, since without body no action is possible. This objection, the Naiyāyikas reply, fails because it is caught between the two horns of a dilemma. If God's existence is proved by śruti, then the objection stands precluded, for there is no point in arguing against what is already proved. On the other hand, if the very existence of God is not proved, there is no basis for an argument against the possibility of His action without a body.²

Still another anti-theistic argument is based on the

The third objection and the Naiyāyika's reply to it.

problem of the end of creation. In creating the world God must have some end in view, for nobody acts without a desire to realize some end.

But what may be the end of God's creative activity? It cannot be any end of His own, because there are no unfulfilled desires or unattained ends in the Divine Being who is perfect. Nor can it be the end or good of others. He who labours only for others must not be regarded as an intelligent person. It cannot be said that God was moved by compassion (karuṇā) in the act of creation. If it were really so, He should have made all his creatures perfectly happy, and not so miserable as we actually find them. Compassion is just the desire to relieve the suffering of other creatures without any self-interest. So it follows that the world is not created by God. The Naiyāyikas meet this objection thus: "God's action in creation is indeed caused by compassion. But we must not forget that the idea of a creation which consists only of happiness is inconsistent with the nature of things. Certain eventual differences in the form of happiness or

¹ Vide Sarvadarśana, Ch. XI.

² Ibid.

misery are bound to arise out of the good or bad actions of the beings who are to be created. It cannot be said that this will limit God's independence in so far as His compassionate creative act depends on the actions of other beings. One's own body does not hinder one. Rather, it helps one to act and achieve one's ends. In a like manner, the created world does not hinder and limit God, but serves as the means for the realization of God's moral ends and rational purposes."¹

VI. CONCLUSION

The value of the Nyāya system lies especially in its methodology or theory of knowledge on which it builds its philosophy. One of the charges against Indian philosophy is that it is based on religious authority and is, therefore, dogmatic and not critical. The Nyāya philosophy is a standing repudiation of this charge. The theory of knowledge, formulated by the Nyāya, is made the basis not only of the Nyāya-Vaiśeṣika, but also of other Indian systems, with slight modifications. The Nyāya applies the method of logical criticism to solve the problems of life and reality. It is by means of a sound logic that it finds out the truth and defends it against hostile criticism. But the Nyāya theory of pluralistic realism is not as satisfying as its logic. Here we have a common-sense view of the world as a system of many independent realities, like material atoms, minds, individual souls and God, which are externally related to one another in space, time and ākāśa. It does not give us a systematic philosophy of the world as a whole in the light of one universal absolute principle. The philosophical position of the Nyāya is said to be lower than that of the Sāṅkhya or

¹ *Ibid.*

the Vedānta. This becomes manifest when we consider its theory of the individual self and God. According to it, the individual self is a substance which is not essentially conscious and intelligent, but is accidentally qualified by consciousness when associated with a body. But such a view of the self is contradicted by the evidence of our direct experience which reveals the self as a conscious subject and not as a *thing* with the quality of consciousness. Further, on this view, the liberated self has no consciousness and is, therefore, indistinguishable from a material substance. The Nyāya conception of God as the architect of the world, its efficient but not material cause, has an obvious reference to human relations and reduces God to the position of a human artisan who makes things out of given material. There is indeed the suggestion that the world of things and beings is related to God as one's body is to his self. But this idea is not properly developed in the direction of a full-fledged theism. Still, as a philosophy of life, the Nyāya theism is no less edifying and assuring than other forms of it.

CHAPTER VI

THE VAISEṢIKA PHILOSOPHY

I. INTRODUCTION

The Vaiśeṣika system was founded by Kaṇāda. It is so named in view of the fact that the Vaiśeṣika system was founded by Kaṇāda, 'viśeṣa' as a category of knowledge has been elaborately discussed in it. The founder of this philosophy, we are told, was surnamed 'Kaṇāda' because he led the life of an ascetic and used to live on grains of corn gleaned from the field. His real name was Uluka. So the Vaiśeṣika philosophy is also known as the Kāṇāda or Aulukya system.

The first systematic work of this philosophy is the *Vaiśeṣika-sūtra* of Kaṇāda. It is divided into ten adhyāyas or books, each consisting of two āhnikas or sections. Some important works of the system. Praśastapāda's *Padārtha-dharma-saṅgraha* has not the character of a Bhāṣya, but reads like an independent exposition of the Vaiśeṣika philosophy. Further, we know from two commentaries¹ on Śaṅkara's *Sārīraka Bhāṣya* that Rāvaṇa, King of Ceylon, wrote a commentary on the *Vaiśeṣika-sūtra*. Udayana's *Kiraṇāvalī* and Sridhara's *Nyāya-kandalī* are two excellent commentaries on Praśastapāda's work. The later works on the Vaiśeṣika combine this system with the Nyāya. Of these Sivāditya's *Sapta-padārthī*, Laugākṣi

¹ Vide *Prakaṣārtha* and *Ratnaprabhā*, 2.2.11.

Bhāskara's *Tarka-kaumudī*, Vallabhācārya's *Nyāya-līlāvati* and Viśvanātha's *Bhāṣā-pariccheda* with its commentary *Siddhānta-muktāvalī* are important.

The Nyāya and the Vaiśeṣika are allied systems of philosophy (samānatānta). They have the same end in view, namely, liberation of the individual self.

Its relation to the Nyāya system.

According to both, ignorance is the root cause of all pain and suffering ; and liberation, which consists in their absolute cessation, is to be attained through a right knowledge of reality. There is, however, some difference between the two systems on two fundamental points. While the Nyāya accepts four independent sources of knowledge, namely, perception, inference, comparison and testimony, the Vaiśeṣika recognizes only two, viz. perception and inference, and reduces comparison and verbal testimony to inference. Secondly, the Naiyāyikas give us a list of sixteen padārthas which, according to them, cover the whole of reality and include those accepted in the other system. The Vaiśeṣikas, on the other hand, recognize only seven padārthas and comprehend all reals under them. These seven categories of reality are (1) dravya or substance,

(2) guṇa or quality, (3) karma or action, (4) sāmānya or generality, (5) viśeṣa or particularity, (6) samavāya or the relation of inherence, and (7) abhāva or non-existence. The Vaiśeṣika philosophy is an elaboration and a critical study of these seven categories.

The seven categories of the Vaiśeṣika system,

Padārtha literally means the object denoted by a word. So by padārtha we propose to mean all objects

of knowledge or all reals. Now, according to the Vaiśeṣikas, all objects, denoted by words, may be broadly divided into two classes, of which six are positive and one negative. namely, being and non-being (bhāva and abhāva). Being stands for all that is, or for all positive realities, such as existent physical things, minds, souls, etc. Similarly, non-being stands for all negative facts like the non-existence of things. There are six kinds of being or positive realities, namely, substance, quality, action, generality, particularity and inherence. To these the later Vaiśeṣikas added a seventh padārtha called abhāva which stands for all negative facts.¹

II. THE CATEGORIES

1. *Substance or Dravya* ²

A dravya or substance is that in which a quality

Substance is the substratum of qualities and actions and the material cause of composite things.

or an action can exist, but which is distinct from both. Without substance there can be no quality or action. A thing must be or exist, if

it is to have any quality or action belonging to it. So a substance is the substratum of qualities and actions. It is also the constitutive or material cause (samavāyikāraṇa) of other composite things produced from it. Thus a cloth is a composite thing formed by the

¹ Vide *Tarkamṛta*, Ch. I ; *Tarkabhāṣā*, p. 29 ; *Vaiśeṣika-sūtr.*, 1.1.14.

² Vide *Tarkasaṅgraha*, Secs. on Uddesa and Dravya ; *Tarkabhāṣā*, pp. 20-23 ; *Vaiśeṣika-sūtr.*, 1.1.15.

combination of a number of threads of a certain colour. Now the threads are the material or constitutive causes of the cloth, because it is made of threads and subsists in them. Similarly, wood and lead are the material causes of a wooden pencil because it is made of them.¹

There are nine kinds of substances, namely, earth or *prthivī*, water or *jala*, light or *tejas*,
There are nine kinds of substances. air or *vāyu*, ether or *ākāśa*, time or *kāla*, space or *dik*, soul or *ātmā*, and mind or *manas*. Of these the first five are called physical elements (*pañcabhūta*), since each of them possesses a specific or peculiar quality (*vīśeṣa guṇa*) which is sensed by an external sense. Smell is a peculiar property of earth. Other substances have smell only as they are mixed up with some quantity of earth. There is smell in muddy water, but no smell in water which is pure. Taste is the peculiar property of water, colour of light, touch of air, and sound of

¹ As distinguished from *samavāyikāraṇa*, the colour of the threads is the *asamavāyikāraṇa* or non-constitutive cause of the colour of the cloth. It is the mediate cause of an effect. The colour of the threads determines the colour of the cloth through being related to the threads which are the constitutive causes. There is still another kind of cause, namely, the *nimittakāraṇa* or efficient cause. It stands for that cause of an effect which is neither constitutive nor non-constitutive, but still necessary for the effect. Thus the spindle is the efficient cause of the cloth, because it is the instrument by which the combination of threads is effected in order to manufacture a piece of cloth. To these we may add the directive cause (*prayojaka*) and final cause (*bhoktā*) of an effect. In relation to a cloth, the weaver is the *prayojaka* or directive cause because he is the agent who acts on and directs the previous causes to bring about the effect. So also, the *bhoktā* or final cause of the cloth is the person or persons whose purpose it serves, i.e. the wearer of the cloth. Cf. Aristotle's classification of causes into the formal, material, efficient and final.

ākāśa or ether. These five specific qualities are sensed by the five external senses. Each of the senses is constituted by the physical element whose specific quality is sensed by it. The sense of smell is constituted by the element of earth, the sense of taste by water, the sense of sight by light, that of touch by air, and that of hearing by ākāśa. We find that earthy substances, like odoriferous particles in smelling objects, manifest the quality of smell. From this we conclude that the sense of smell which manifests smell is constituted by earth. For similar reasons it is held that the senses of taste, sight, touch and hearing are respectively made of the elements of water, light, air and ether.

The substances of earth, water, light and air are of two kinds, namely, eternal

The atoms of earth, water, light and air are eternal, while compounds made of earth, etc., are non-eternal.

(nitya) and non-eternal (anitya).

The atoms (paramāṇu) of earth, water, light and air are eternal,

because an atom is partless and can

be neither produced nor destroyed. All other kinds of earth, water, etc., are non-eternal, because they are produced by the combination of atoms, and are, therefore, subject to disintegration and destruction. We cannot ordinarily perceive an atom. The existence of

atoms is known by an inference

The existence of atoms is proved by inference.

like this: The ordinary composite

objects of the world like jars, tables,

and chairs, are made up of parts.

Whatever is produced must be made up of parts, for to produce a thing is to combine certain parts in a certain way. Now if we go on separating the parts of a composite thing, we shall pass from larger to smaller, from

smaller to still smaller, and from these to the smallest parts which cannot be further divided in any way. These indivisible and minutest parts are called paramāṇus or atoms. An atom cannot be produced, because it has no parts, and to produce means to combine parts. Nor can it be destroyed, for to destroy a thing is to break it up into its parts, whereas the atom has no parts. Thus being neither produced nor destructible the atoms or the smallest parts of a thing are eternal.

Ākāśa is the fifth physical substance which is the substratum of the quality of sound.

Ākāśa is one, eternal and all-pervading physical substance which is imperceptible.

While sound is perceived, ākāśa cannot be perceived. There are two conditions of the external perception of a substance, namely, that it must have a perceptible dimension (mahattva) and manifest colour (udbhūtarūpavattva). Ākāśa is not a limited and coloured substance. Ākāśa is an all-pervading bearer of the quality of sound and is inferred from the perception of that quality. Every quality must belong to some substance. Sound is not a quality of earth, water, light and air, because the qualities of these substances are not perceived by the ear, while sound is perceived by our ears. Further, there may be sound in regions relatively free from the influence of these substances. Nor can sound belong as a quality to space, time, soul and mind, for these exist even when there is no sound to qualify them. So there must be some other substance called ākāśa or ether of which sound is the quality. It is one and eternal because it is not made up of parts and does not depend on any other substance

for its existence. It is all-pervading in the sense that it has an unlimited dimension and its effect or operation is perceived everywhere.

Space (dik) and time (kāla) are, like ākāśa, imperceptible substances each of which is one, eternal and all-pervading. Space is inferred as the ground of our cognitions of 'here' and 'there,' 'near' and 'far.' Time is the cause of our cognitions of 'past,' 'present' and 'future,' 'older' and 'younger.' Although one and indivisible, ākāśa, space and time are distinguished into different parts and thus conventionally spoken of as many by reason of certain limiting conditions (upādhi) which affect our knowledge of them. Thus the expressions 'the ether enclosed by a jar,' 'that by a house,' 'filled and empty space,' 'the east and the west,' 'a minute, an hour and a day' are due to the apparent distinctions, made by certain conditions, in what is really one ether, one space and one time.

The soul (ātmā) is an eternal and all-pervading substance which is the substratum of the phenomena of consciousness. There are two kinds of souls, namely, the individual soul (jīvāt-mā) and the supreme soul (paramātmā or Iśvara). The latter is one, and is inferred as the creator of the world. The former is internally or mentally perceived as possessing some quality when, for example, one says, 'I am happy,' 'I am sorry,' and so forth. The individual self is not one but many, being different in different bodies.

Manas, which is a substance, is the internal sense (antarindriya) for the perception of the individual soul and its qualities, like pleasure and pain. It is atomic and cannot, therefore, be perceived.

Manas is an atomic imperceptible substance. Proofs for the existence of manas or the mind.

Its existence is inferred from the following grounds : (a) Just as in the perception of the external objects of the world, we require the external senses, so in the perception of internal objects, like the soul, cognition, feeling and willing, there must be an internal sense, to which we give the name of mind (manas). (b) Secondly, we find that although the five external senses may be in contact with their respective objects at the same time, we have not simultaneous perceptions of colour, touch, sound, taste and smell. But why must this be so ? If when talking to a friend in your house, your eyes are in contact with his facial expressions, your ears are in contact with the rumbling sound of the tram car outside, and your skin is in contact with the clothes you wear, you should have simultaneous perceptions of the friend's face, of the tram car and of the clothes. But you do not get all these perceptions at the same time. This shows that over and above the contact between the external senses and their objects, there must be some other cause which limits the number of perceptions to one at a time, and the order of perceptions to one of succession, i.e. one after the other and not all together. Of the different objects which may be in contact with our external senses at one and the same time, we perceive only that to which we are attentive. This means that we must *attend* to, or turn our mind

(manas) and fix it on (manoyoga), the object of perception. So every perception requires the contact of the mind (manas) with the object through its contact with the sense organ in question. That is, we must admit the existence of manas as an internal sense. That the manas is partless or atomic also follows from the order of succession among our experiences. If the mind were not an infinitesimal or partless entity, there could have been simultaneous contact of its many parts with many senses, and so the appearance of many perceptions at one and the same time. But as this is not the case, we are to say that the manas is partless or atomic, and functions as an internal sense of perception. It is the organ through which the soul attends to objects.

2. *Quality or Guṇa*¹

A quality or guṇa is defined as that which exists in

A quality exists in a substance and has no quality or activity in it. A substance exists by itself and is the constituent

(samavāyi) cause of things. An attribute depends for its existence on some substance and is never a constitutive cause of anything. It is a non-constitutive or non-material cause of things in so far as it determines only their nature and character, but not their existence. All qualities must belong to substances and so there cannot be qualities of a quality. A red colour belongs to some thing and not to any other colour. A quality (guṇa) is an unmoving or motionless property

¹ Vide *Vaiśeṣika-sūtra*, I.1.16; *Tarkasaṅgraha*, Sec. on guṇa; *Tarka-bhāṣā*, pp. 24-28.

of things. It inheres in the thing as something passive and inactive (*niṣkriya*). So it is different from both substance (*dravya*) and action (*karma*).

There are altogether twenty-four kinds of qualities.

There are twenty-four kinds of qualities.

These are *rūpa* or colour, *rasa* or taste, *gandha* or smell, *sparśa* or touch, *śabda* or sound, *saṅkhyā* or number, *parimāṇa* or magnitude, *prthaktva* or distinctness, *saṁyoga* or conjunction, *vibhāga* or disjunction, *paratva* or remoteness, *aparatva* or nearness, *buddhi* or cognition, *sukha* or pleasure, *duḥkha* or pain, *icchā* or desire, *dveṣa* or aversion, *prayatna* or effort, *gurutva* or heaviness, *dravatva* or fluidity, *sneha* or viscosity, *saṁskāra* or faculty, *dharma* or merit, and *adharma* or demerit. Many of these qualities have subdivisions. Thus there are different kinds of colour like white and black, red and blue, yellow and green. There are different kinds of taste, such as sweet, sour, bitter, etc. Smell is of two kinds, namely, good and bad. The quality of touch is of three kinds, viz. hot, cold, and neither hot nor cold. Sound is of two kinds, viz. *dhvani* or an inarticulate sound (e.g. the sound of a bell) and *varṇa* or an articulate sound (e.g. a letter-sound).

Number is that quality of things for which we use the words, one, two, three. There

Number is a quality of things.

are many kinds of number from one upwards. Magnitude is that quality

by which things are distinguished as large or small. It

Magnitude is a quality of which there are four kinds.

is of four kinds, viz. the atomic or extremely small, the extremely great, the small and the large.

Prthaktva is that quality by which we know that one

thing is different and distinct from another, *e.g.* a jar from a picture, a table from a chair.

Conjunction is the union between two or more things

Conjunction is union between two separable things, and disjunction is their separation after conjunction.

which can exist separately, *e.g.* a book and a table. The relation between an effect and its cause is not one of conjunction, since the

effect cannot exist without relation to the cause. Disjunction is the disconnection between things, which ends their previous conjunction. Conjunction is of three kinds, according as it is due to motion in one of the things conjoined (as when a flying kite sits on a hill-top), or to that of both the things (as when two balls moving from opposite directions meet and impinge). It may also be due to another conjunction. When the pen in my hand touches the table, there is conjunction between my hand and the table, brought about by the conjunction between my hand and the pen. Similarly, disjunction may be caused by the motion of one of the things disjoined, as when a bird flies away from a hill-top. Or, it may be due to the motion of both the things, as when the balls rebound after impact. It may also be caused by another disjunction as when I drop the pen from my hand and thereby disconnect my hand from the table.

Remoteness and nearness are each of two kinds,

There are two kinds of remoteness and nearness.

namely, the temporal and the spatial. As temporal, they mean the qualities of being older and

younger, and as spatial, those of being far and near.

Buddhi, knowledge or cognition, and its different forms have been explained before.¹ Pleasure and pain,

¹ Vide Ch. V, pp. 191-93.

desire and aversion are well-known facts. Prayatna or effort is of three kinds, namely, Prayatna is of three kinds. pravṛtti or striving towards something, nivṛtti or striving away from something, and jīvanayoni or vital function. Gurutva or heaviness is the cause of the fall of bodies. Dravatva or fluidity is the cause of the flowing of certain substances like water, milk, air, etc. Sneha or viscosity is the cause of the adhesion of different particles of matter into the shape of a ball or a lump. This quality belongs exclusively to water.

Samskāra or faculty is of three kinds, viz. vega or velocity which keeps a thing in motion, bhāvanā or mental impressions which help us to remember and recognize things, and sthitisthāpaka or elasticity, by which a thing tends towards equilibrium when disturbed, e.g. a rubber garter. Dharma and adharma respectively mean virtue and vice and are due to the performance of enjoined and forbidden acts. One leads to happiness and the other to misery.

Thus we get a list of twenty-four qualities in the Vaiśeṣika system. Now one may ask: Why should we admit just this number? Can it not be more or less than that? To this we reply that if one takes into consideration the numerous subdivisions of these qualities, then their number would be very great. But in a classification of objects we are to reduce them to such kinds as are ultimate from a certain standpoint, i.e. do not admit of further reduction. So we come to the simplest forms or kinds

Why just this number of twenty-four qualities?

of qualities. Thus while one compound colour like orange may be reduced to red and yellow, or a complex sound may be shown to arise out of the combination of other sounds, it is not possible for us to reduce colour to sound or any other quality. It is for this reason that we have to recognize colour, sound, touch, taste and smell as distinct and different kinds of qualities. The Vaiśeṣika classification of qualities into twenty-four kinds is guided by these considerations of their simplicity or complexity, and reducibility or irreducibility. The *guṇas* are what the Vaiśeṣikas thought to be the *simplest, passive* qualities of substances.

3. Action or Karma¹

Karma or action is physical movement. Like a quality, it belongs only to substance, but is different from both. A substance is the support of both quality and action; a quality is a static character of things, but an action is dynamic. While an attribute is a passive property that does not take us beyond the thing it belongs to, action is a transitive process by which one thing reaches another. So it is regarded as the independent cause of the conjunction and disjunction of things. An action has no quality, because the latter belongs only to substance. All actions or movements must subsist in limited corporeal substances (*mūrtadṛavya*), such as earth, water, light, air and the mind. So there can be no action or motion in the all-pervading substances like *ākāśa*,

¹ *Tarkasaṅgraha*, p. 87; *Tarkabhāṣā*, p. 28; *Vaiśeṣika-sūtra*, 1. 1. 17; *Tarkāmṛta*, p. 80.

space, time and the soul. There can be no movement of an all-pervading thing because it cannot change its position.

There are five kinds of action or movement, namely,
 utkṣepaṇa or throwing upward,
 avakṣepaṇa or throwing downward,
 ākuñcana or contraction, prasāraṇa
 or expansion, and gamana or locomotion. Of these, utkṣepaṇa is the cause of the contact of a body with some higher region, e.g. throwing a ball upward. Avakṣepaṇa is the cause of the contact of a body with some lower region, e.g. throwing down a ball from a house-top. Ākuñcana is the cause of such closer contact of the parts of a body as did not previously exist, e.g. clenching the fingers or rolling up a cloth. Prasāraṇa is the cause of the destruction of previous closer contact among the parts of a body, e.g. opening one's clenched hand. All other kinds of actions are denoted by gamana. Such actions as the walking of a living animal, going up of flames, etc., are not separately classed in so far as they may all be included within gamana. All kinds of actions cannot be perceived. The action of the mind (manas) which is an imperceptible substance does not admit of ordinary perception. The actions or movements of perceptible substances like earth, water and light can be perceived by the senses of sight and touch.

4. Generality or Sāmānya

Things of a certain class bear a common name because they possess a common nature. Sāmānya is the class-essence or the universal. Men, cows and swans have, severally,

something in common on account of which they bear these general names. The thought of what they have in common, is called a general idea or class-concept. Now the question is: What is it that they have in common? Or, what is the something that is common in them, and is the ground of their being brought under one class and called by the same name? The first answer, which is only provisional, is that it is the class-essence corresponding to the class-concept. The Nyāya-Vaiśeṣikas would say that it is their *sāmānya* or generality. Or, in the words of modern Western philosophers, it is the "universal" in them. Hence the previous question leads to a second, viz. what is *sāmānya* or the universal?

There are three main views of the universal or the class-essence in Indian philosophy

There are three views of the universal:
The Buddhist view.

In the Buddhist philosophy we have the nominalistic view. According to it, the individual (*svlakṣaṇa*) alone is real and there is no class or universal other than the particular objects of experience. The idea of sameness that we may have with regard to a number of individuals of a certain character is due to their being called by the same name. It is only the name that is general, and the name does not stand for any positive essence that is present in all the individuals. It means only that the individuals called by one name are different from those to which a different name is given. Thus certain animals are called cow, not because they possess any common essence but because they are different from all animals that are not cows. So there is no universal but the name with a negative connotation.¹

The Jainas² and the Advaita Vedāntins³ adopt the conceptualistic view of the universal. According to them,

¹ Vide *Tarkabhāṣā*, p. 28; *Six Buddhist Nyāya Tracts*, Ch. V.

² Vide *Outlines of Jainism*, p. 115.

³ Vide *Paribhāṣā*, Ch. I.

the universal does not stand for any independent entity

The Jaina and the Vedānta view. over and above the individuals. On the other hand, it is constituted by the essential common attributes of all the

individuals. So the universal is not separate from the individuals, but is identical with them in point of existence. The universal and the individual are related by way of identity. The universal has existence, not in our mind only, but also in the particular objects of experience. It does not, however, come to them from outside and is not anything like a separate 'essence,' but is only their common nature.

The Nyāya-Vaiśeṣikas¹ enunciate the realistic theory of the universal. According to them, universals are eternal (nitya) entities which are distinct from, but inhere in, many individuals (anekānugata). There is the same (eka) universal in all the individuals of a class. The universal is the basis of the notion of sameness that we have with regard to all the individuals of a certain class. It is because there is one common essence present in different individuals that they are brought under a class and thought of as essentially the same. Thus sāmānya or the universal is a real entity which corresponds to a general idea or class-concept in our mind. Some of the modern realists² also hold that a 'universal is an eternal timeless entity which may be shared by many particulars.' They agree further with the Naiyāyikas in maintaining that universals do not come under *existence* (sattā). These do not exist in time and space, but have being and subsist in substance, attribute and action (dravya-guṇa-karmavṛtti).

¹ Vide *Tarkasaṅgraha*, p. 87; *Bhāṣāpariccheda* and *Muktāvalī*, 6, 14, 15; *Tarkabhāṣā*, p. 28; *Tarkāmṛta*, Ch. 1; *Padārthadharmā*, p. 164

² Cf. Russell, *Problems of Philosophy*, Ch. IX.

There is no universal subsisting in another universal, because there is but one single universal for one class of objects. If there were two or more universals in the same class of things, then they would exhibit contrary and even contradictory natures and we could not classify them one way or the other. The same individuals could have been men and cows at the same time.

In respect of their scope or extent, universals may

Universals may be distinguished into three kinds—para, apara and parāpara.

be distinguished into para or the highest and all-pervading, apara or the lowest, and the parāpara or the intermediate.¹ 'Being-hood' is the highest universal, since all other universals come under it. Jar-ness (ghaṭatva) as the universal present in all jars is apara or the lowest, since it has the most limited or the narrowest extent. Substantiality or thinghood (dravyatva) as another universal is parāpara or intermediate between the highest and the lowest. It is para or wider in relation to substances like earth, water, etc., and apara or narrower in relation to the universal 'being-hood' which belongs to substance, quality and action.

5. Particularity or Viśeṣa²

Particularity (viśeṣa) is the extreme opposite of the

Particularity is the unique individuality of the eternal substances.

universal (sāmānya). By particularity we are to understand the unique individuality of substances

¹ Vide *Bhāṣāpariccheda* and *Muktāvalī*, 8, 9; *Ngāyāliḍvatī*, pp. 80-81. Cf. *Tarkamṛta*, Ch. I.

² Vide *Tarkasaṅgraha*, pp. 11, 88; *Bhāṣāpariccheda* and *Muktāvalī*, 10; *Tarkabhāṣā*, p. 28; *Tarkamṛta*, Ch. I; *Padārthadharmā*, p. 168.

which have no parts and are, therefore, eternal, such as space, time, ākāśa, minds, souls, and the atoms of earth, water, light and air. How are we to distinguish one mind or soul from another? How again is one atom of water distinguished from another atom of water? That they are different from one another must be admitted by us. Yet we cannot explain it by the difference of their parts, because they have no parts at all. On the other hand, they are similar in other respects. So we have to admit some peculiarity or unique character whereby they are distinguished from one another. The category of *viśeṣa* stands for this peculiar character of the otherwise indistinguishable substances.

As subsisting in the eternal substances, *viśeṣas* are themselves eternal (*nitya*). We should not suppose that *viśeṣa* pertains to the ordinary things of the world like pots, chairs and tables. It does not belong to anything made up of parts. Things which are made up of parts, i.e. composite wholes, are easily distinguishable by the differences of their parts. So we do not require any category like *viśeṣa* to explain their distinction. It is only when we come to the ultimate differences of the partless eternal substances that we have to admit certain original or underived peculiarities called *viśeṣas*. There are innumerable particularities, since the individuals in which they subsist are innumerable. While the individuals are distinguished by their particularities, the latter are distinguished by themselves (*svataḥ*). Hence particularities are so many ultimates (*antya*) in the analysis and explanation of the

Particularities are eternal and distinguished by themselves.

differences of things. There cannot be any perception of them; like atoms, they are supersensible entities.

6. *Inherence or Samavāya*¹

There are two main relations recognized in the Nyāya-Vaiśeṣika philosophy. These are *samyoga* or conjunction and *samavāya* or inherence. Conjunction is a temporary or non-eternal relation between two things which can, and usually do, exist in separation from each other. Two balls moving from opposite directions meet at a certain place. The relation which holds between them when they meet is one of conjunction. It is a temporary contact between two substances which may again be separated and yet exist (*yutasiddha*). So long as the relation of conjunction is, it exists as a quality of the terms related by it. But it does not affect the existence of those terms. It makes no difference to the existence of the balls whether they are conjoined to each other or not. Thus conjunction is an external relation which exists as an accidental quality of two substances related by it.

As distinguished from conjunction, *samavāya* is a permanent or eternal relation between two entities, of which one inheres in the other. The whole is in its parts, a quality or an action is in a substance, or the universal is in the individuals, and particularity is in some simple eternal substance. Thus we say that the

How the two are distinguished from each other.

¹ *Tarkasaṅgraha*, p. 88; *Tarkabhāṣā*, p. 2; *Padārthadharmasūtra*, pp. 171-75; *Bhāṣāpariccheda* and *Muktāravaṇī*, 11, 60.

cloth as a whole is in the threads, the colour *red* as a quality is in the [rose, motion as an action belongs to the moving ball, manhood as a universal is in individual men, and the peculiarity or the distinctive character of one mind or soul is in that mind or soul.

Conjunction is a temporary relation between two things which can exist separately, and it is produced by the action of either or both of the things related, e.g. the relation between a man and the chair on which he may be seated for the time being. On the other hand, the whole is *always* related to its parts, a quality or an action is *always* related to some substance, and so forth. So long as any whole, say a jar, is not broken up, it must exist in the parts. So also, any quality or action must be related to some substance as long as it exists. Thus we see that the relation of a whole to its parts, of any quality or action to its substance, of the universal to the individual, and of particularity to the eternal substances is not produced or brought about by any external cause. Hence it is that they are said to be inseparably related (*ayutasiddha*). *Samavāya* is this *eternal* relation between any two entities, one of which cannot exist without the other. Terms related by *samavāya* cannot be reversed like those related by *saṁyoga*. If there is a contact of the hand with a pen, the pen also must be in contact with the hand ; but though a quality is in a substance, the substance is not in the quality.

7. *Non-existence or Abhāva*

We have dealt with the six positive categories above.

Now we come to the negative category of *abhāva* or non-existence,

Abhāva is the seventh category.

which does not come under any of the six categories. The reality of non-existence cannot be denied. Looking at the sky at night you feel as much sure of the non-existence of the sun there, as of the existence of the moon and the stars. The Vaiśeṣika recognizes, therefore, non-existence as the seventh category of reality. It is true that Kaṇāda did not mention abhāva as a separate category in the enumeration of the ultimate objects of knowledge (padārtha). Hence some people think that he was in favour of accepting only six categories. But in view of the facts that non-existence as a possible object of knowledge has been discussed in other parts of the *Vaiśeṣika-Sūtra* and that Praśastapāda, the most authoritative exponent of the Vaiśeṣika philosophy, has treated it as the seventh category, we propose to consider it as such.¹

Abhāva or non-existence is of two kinds, namely, *sāmsargābhāva* and *anyonyābhāva*. *Sāmsargābhāva* means the absence of something in something else. *Anyonyābhāva* means the fact that one thing is not another thing. *Sāmsargābhāva* is of three kinds, namely, *prāgabhāva*, *dhvamsābhāva* and *atyantābhāva*.² All kinds of *sāmsargābhāva* can be expressed by a judgment of the general form 'S is not in P,' whereas *anyonyābhāva* can be expressed by a judgment like 'S is not P.'

¹ Vide *Vaiśeṣika-sūtra*, 1. 1. 4, 9. 1. 1-10.

² *Bhāṣāpariccheda* and *Muktāvalī*, 12; *Tarkabhāṣā*, p. 29; *Tarkasāg-
raha*, p. 89; *Tarkamṛta*, Ch. 1.

Prāgabdhāva or antecedent non-existence is the non-existence of a thing before its production. When one says 'a house will be built with bricks,' there is non-existence of the house in the bricks. This non-existence of a house in the bricks before its construction is prāgabdhāva. It means the absence of a connection between the bricks and the house which has not yet been built with them. The house *never* existed before being built, so that its non-existence before construction has no beginning (anādi). When, however, the house is built, its previous non-existence comes to an end (anta). Hence it is that prāgabdhāva is said to be without a beginning, but having an end (anādi and sānta).

Dhvamsābbhāva is the non-existence of a thing on account of its destruction after production. A jar which has been produced by a potter may be subsequently broken into pieces. When the jar is broken into pieces, there is its non-existence in those pieces. This non-existence of a previously existing thing, due to its destruction, is called dhvamsābbhāva. It is said to have a beginning (sādi), but no end (ananta). The non-existence of the jar begins with its destruction, but it cannot be ended in any way, for the very same jar cannot be brought back into existence. It will be seen here that although in the case of positive entities (bhāva padārtha), the general rule is that, whatever is produced must be destroyed, in the case of negative entities (abhāva padārtha), something which is produced cannot be

destroyed. The non-existence of the jar is produced by its destruction, but that non-existence cannot itself be destroyed. To destroy or end the jar's non-existence, we are to restore the same jar to existence, which is impossible.

Atyantābhāva or absolute non-existence is the absence of a connection between two things for all time—past, present and future, *e.g.* the non-existence of colour in air. It is thus different from *prāgabhāva* and *dhvānsābhāva*. *Prāgabhāva* is the non-existence of a thing before its production. *Dhvānsābhāva* is the non-existence of a thing after its destruction. But *atyantābhāva* is the non-existence of a thing, not in any particular time, but for all time. So it is subject neither to origin nor to cessation, *i.e.* it is both beginningless and endless (*anādi* and *ananta*).

While *sāmsargābhāva* is the absence of a connection between two things, *anyonyābhāva* underlies the difference (*bheda*) of one thing from another thing. When one thing is different from another thing, they mutually exclude one another and there is the non-existence of either as the other. A table is different from a chair. This means that a table does not exist as a chair, or, more simply, a table is not a chair. *Anyonyābhāva* is this non-existence of one thing as another, from which it is different. Thus *sāmsargābhāva* is the absence of a connection (*sāmsarga*) between two entities, and its opposite is just their connection. On the other hand, *anyonyābhāva* is the absence of one thing as another, and its

Atyantābhāva is absolute non-existence in the past, present and future.

Anyonyābhāva implies the difference of one thing from another.

opposite is just their sameness or identity. Take the following illustrations. 'A hare has no horn,' 'there is no colour in air' are propositions which express the absence of a connection between a hare and a horn, between colour and air. The opposite of these will be the propositions 'a hare has horns,' 'there is colour in air.' 'A cow is not a horse,' 'a jar is not a cloth' are propositions which express the difference between a cow and a horse, a jar and a cloth. The opposite of these will be the propositions 'a cow is a horse,' 'a jar is a cloth.' Thus we may say that *samsargābhāva* is relative non-existence in the sense of a negation of the connection or relation (*samsarga*) between any two objects, while *anyonyābhāva* is mutual non-existence or difference in the sense of a negation of the identity (*tādātmya*) between two objects. Like *atyantābhāva* or absolute non-existence, *anyonyābhāva* or mutual non-existence is without a beginning and an end, i.e. is eternal.

III. THE CREATION AND DESTRUCTION OF THE WORLD ¹

From the standpoint of Indian philosophy the world

The Vaiśeṣika theory of the world is guided by the general spiritual outlook of Indian philosophy.

including physical nature is a moral stage for the education and emancipation of individual souls. The Vaiśeṣika theory of the world is guided by this general spiritual outlook of Indian philosophy. In its attempt to explain the origin and destruction of the world, it does indeed reduce all composite objects to the four kinds of atoms of earth, water, fire and air. So it is sometimes characterized as the atomic theory of the world. But it does not ignore the moral and spiritual principles governing the processes

¹ Vide *Padārthadharmā*., pp. 19-23; *Nyāyakanda*ḥ, pp. 50-54; *Kuṣumāñjali*, 2; *Tattvacintāmaṇi*, ii.

of composition and decomposition of atoms. Further, five of the nine kinds of substances, to which all things may be reduced, are not and cannot be reduced to material atoms. So the atomic theory of the Vaiśeṣika has a background different from that of

It is different from the atomism of Western philosophy.

the atomism of Western science and philosophy. The latter is in principle a materialistic philosophy of the world.

It explains the order and history of the world as the mechanical resultant of the fortuitous motions of innumerable atoms in infinite space and time, and in different directions. There is no mind or intelligent power governing and guiding the operations of the material atoms; these act according to blind mechanical laws. The atomism of the Vaiśeṣika, however, is a phase of their spiritual philosophy. According to it, the ultimate source of the actions of atoms is to be found in the creative or the destructive will of the Supreme Being who directs the operations of atoms according to the unseen deserts (adṛṣṭa) of individual souls and with reference to the end of moral dispensation. On this view, the order of the world is like that of a monarchical state, which ultimately expresses the will of a wise monarch and in which all things are so ordered and adjusted that the citizens get ample opportunities for self-expansion and self-development as free and responsible beings.

The atomic theory of the Vaiśeṣika explains that part of the world which is non-eternal, i.e. subject to origin and destruction in time. The eternal constituents of the universe, namely, the four kinds of atoms, and the five substances of ākāśa, space, time, mind, and soul, do not come within the purview of

The atomic theory of the Vaiśeṣika explains the order of creation and destruction of non-eternal objects.

their atomic theory, because these can neither be created nor destroyed. On the other hand, all composite objects, beginning with a dyad or the first compound of only two atoms (dvyaṇuka), are non-eternal. So the atomic theory explains the order of creation and destruction of these non-eternal objects. All composite objects are constituted by the combination of atoms and destroyed through their separation. The first combination of two atoms is called a dvyaṇuka or dyad, and a combination of three dyads (dvyaṇukas) is called a tryaṇuka or triad. The tryaṇuka is also called the trasaṇu, and it is the minimum perceptible

object according to the Vaiśeṣika philosophy. The paramāṇu or atom and the dvyaṇuka or dyad, being smaller than the tryaṇuka or triad, cannot be perceived, but are known through inference.

All the finite objects of the physical world and the physical world itself are composed of the four kinds of atoms in the form of dyads, triads and other larger compounds arising out of these. How

can we account for the action or motion of atoms, which is necessary for their combination? How, again, are we to explain this particular order and arrangement of things in the world? In the Vaiśeṣika philosophy the order of the world is, in its broad outlines, conceived like this: The world, or better, the universe is a system of physical

things and living beings having bodies with senses and possessing mind, intellect and egoism. All these exist and interact with one another in time, space and ākāśa. Living beings are souls who enjoy or suffer in this

world according as they are wise or ignorant, good or bad, virtuous or vicious. The order of the world is, on the whole, a moral order in which the

life and destiny of all individual selves are governed, not only by the physical laws of time and space, but also

by the universal moral law of karma. In the simplest form this law means 'as you sow, so you reap,' just as the physical law of causation, in its most abstract form, means that there can be no effect without a cause.

Keeping in view this moral order of the universe, the

Vaiśeṣikas explain the process of creation and destruction of the world as follows: The starting-point of the process of creation or destruction is the will of the Supreme Lord (Mahēśvara) who is the ruler of the whole

universe. The Lord conceives the will to create a universe in which individual beings may get their proper share of the experiences of pleasure and pain according to their deserts. The process of creation and destruction of the world being beginningless (anādi), we cannot speak of a first creation of the world. In truth, every creation is

preceded by a state of destruction, and every destruction is preceded by some order of creation. To create is to destroy an existing order of things and usher in a new order. Hence it is that God's creative will has reference

The *adṛṣṭa* of individual souls guides the process of creation.

to the stock of merit and demerit (*adṛṣṭa*) acquired by individual souls in a previous life lived in some other world. When God thus wills to

create a world, the unseen forces of moral deserts in the eternal individual souls begin to function in the direction of creation and the active life of experiences (*bhoga*). And, it is the contact with souls, endowed with the creative function of *adṛṣṭa*, that first sets in motion the atoms of air. Out of the combination of air-atoms, in the form of dyads and triads, arises the gross physical element (*maḥābhūta*) of air, and it exists as an incessantly vibrating medium in the eternal *ākāśa*. Then, in a similar way, there is motion in the atoms of water and the creation of the gross element of water which exists in the air and is moved by it. Next, the atoms of earth are set in motion in a similar way and compose the gross element of earth which exists in the vast expanse of the gross elemental water. Then from the atoms of light arises, in a similar way, the gross element of light and exists with its luminosity in the gross water. After this and by the mere thought (*abhidhyāna*) of God, there appears the embryo of a world (*brahmāṇḍa*) out of the atoms of light and earth. God animates that

Brahmā is the architect of the world.

great embryo with Brahman, the world-soul, who is endowed with supreme

wisdom, detachment and excellence (*jñāna*, *vairāgya* and *aśvarya*). To Brahman God entrusts the work of creation in its concrete details and with proper adjustment between merit and demerit, on the one hand, and happiness and misery, on the other.

The created world runs its course for many years. But it cannot continue to exist and endure

Creation is followed by destruction.

for all time to come. Just as after the stress and strain of the day's work God allows us rest at night, so after

the trials and tribulations of many lives in one created world, God provides a way of escape from suffering for all living beings for some time. This is done by Him through the destruction of the world. So the period of

creation is followed by a state of destruction. The theory of cycles (kalpa) or alternating periods of creation and destruction is accepted by most of the orthodox systems of Indian philosophy. The belief that the world in which we live is not eternal, and that at some distant time there shall be its dissolution, is supported by an analogical argument. 'Just as earthen substances like jars are destroyed, so mountains which are earthy shall be destroyed. Ponds and tanks are dried up. Seas and oceans being only very big reservoirs of water shall dry up. The light of a lamp is blown out. The sun being but a glorious orb of light must be extinguished at some distant time.

The process of the world's dissolution is as follows:

The process of the world's destruction is started by the destructive will of God. When in the course of time Brahmā, the world-soul, gives up his body like other souls, there appears in Mahēśvara or the Supreme Lord a desire to destroy the world. With this, the creative *adr̥ṣṭa* or unseen moral agency in living beings is counteracted by the corresponding *destructive adr̥ṣṭa* and ceases to function for the active life of experience. It is in contact with such souls, in which the destructive *adr̥ṣṭa* begins to operate, that there is motion in the constituent atoms of their body and senses. On account of this motion there is disjunction of the atoms and consequent disintegration of the body and the senses. The body with the senses being thus destroyed, what remain are only the atoms in their isolation. So also, there is motion in the constituent atoms of the elemental earth, and its consequent destruction through the cessation of their conjunction. In this way there is the destruction of the physical elements of earth, water, light and air, one after the other. Thus these four physical elements and all bodies and sense organs are disintegrated and destroyed. What remain are the four kinds of atoms of earth, water, light and air in their isolation, and the eternal substances of *ākāśa*, time, space, minds and souls with their stock of merit, demerit and past impressions (*bhāvanā*). It will be observed here that while in the order of destruction, earth compounds come first, and then those of water, light and air in succession, in the order of creation air compounds come first, water compounds next, and

then those of the great earth and light appear in succession.¹

IV. CONCLUSION

Like the Nyāya system, the Vaiśeṣika is a realistic philosophy which combines pluralism with theism. It traces the variety of the objects of the world to the combination of material atoms of different kinds and qualities. But the creation of the world out of the combination of eternal atoms, in eternal time and space, has reference to the moral life of individual selves. The world is created and destroyed by God according to the moral deserts of individual souls and for the proper realization of their moral destiny. But the realistic idea of the soul and the deistic conception of God in the Vaiśeṣika labour under the difficulties of the Nyāya theory and are as unsatisfactory as the latter. For it, the soul is an independent substance, of which consciousness is an accidental property. It may be admitted by us that the mind or the empirical consciousness is not the real self and that the latter is different from the former. Still it is not possible for us to explain mental phenomena or the empirical consciousness unless we admit that the real or the noumenal self is an essentially conscious and intelligent reality. So also the Vaiśeṣika idea of God as wholly transcendent to and separate from man and the world, is not favourable for a deeply religious view of life and the genuine religious consciousness of communion with

¹ The details of this account of creation and destruction are found in Praśastapāda's *Padārthadharmasaṅgraha* which seems to draw on the Paurāṇika accounts

God. The special contribution of the Vaiśeṣika philosophy is the classification of realities and its atomic cosmology. It recognizes the distinction between positive and negative facts, both of which are said to be equally real and objective. Among positive facts, again, a distinction is made between those that exist in time and space, and those which do not possess such existence. Substance, quality and action are positive and existent realities. Generality, particularity and inherence are positive facts indeed, but these do not exist as particular things or qualities or physical movements in time and space. But the Vaiśeṣika division of reals into seven classes and of these into many other subclasses is more a common-sense and empirical view of things than a philosophical classification of realities. From the latter standpoint a more fundamental distinction would be that between the soul and the non-soul (as in the Jaina system), or spirit and matter (as in the Sāṅkhya). The atomic theory of the Vaiśeṣika is an improvement on the ordinary view of the world as constituted by the physical elements of earth, water, air and fire. It is also an advance on the materialistic theory that all things including life, mind and consciousness are transformations and mechanical products of material atoms. The Vaiśeṣikas harmonize the atomic theory with the moral and spiritual outlook of life and the theistic faith in God as the creator and moral governor of the world. But they do not carry their theism far enough and make God the author not only of the order of nature but also of its ultimate constituents, viz. the atoms, minds and souls, and see God at the heart of all reality.

CHAPTER VII

THE SĀṆKHYA PHILOSOPHY

I. INTRODUCTION

The Sāṅkhya system is the work of a great sage of the name of Kapila. The Sāṅkhya system is the work of the great sage Kapila. It must be a very old system of thought. Its antiquity appears from the fact that the Sāṅkhya tendency of thought pervades all the literature of ancient India including the śrutis, smṛtis and purāṇas. The first work of the Sāṅkhya philosophy is the *Tattovasamāsa* of Kapila. This being very brief and terse, Kapila, we are told, wrote an elaborate work entitled the *Sāṅkhya-pravacana-sūtra*. Hence the Sāṅkhya philosophy is also known as Sāṅkhyaprabhāṇa. This system is sometimes described as the 'atheistic Sāṅkhya' (nirīśvara-sāṅkhya), as distinguished from the Yoga which is called the 'theistic Sāṅkhya' (śeśvara-sāṅkhya). The reason for this is that Kapila did not admit the existence of God and also thought that God's existence cannot be proved. But this is a controversial point.

Next to Kapila, his disciple Āsuri, and Āsuri's disciple Pañcaśikha wrote some books which aimed at a clear and elaborate exposition of the Sāṅkhya system. But these works were destroyed in course of time and we have no information about their contents. Īśvarakṛṣṇa's *Sāṅkhya-kārikā* is the earliest available and authoritative

text-book of the Sāṅkhya. Gaudapāda's *Sāṅkhya-kārikā-bhāṣya*, Vācaspati's *Tattvakaumudī* and Vijñāna-bhikṣu's *Sāṅkhya-pravacana-bhāṣya* and *Sāṅkhya-sāra* are some other important works of the Sāṅkhya system.

The origin of the name 'sāṅkhya' is shrouded in mystery. According to some thinkers, the name 'sāṅkhya' is an adaptation from 'saṅkhyā' meaning number, and has been applied to this philosophy because it aims at a right knowledge of reality by the enumeration of the ultimate objects of knowledge. A more plausible explanation is that the word 'saṅkhyā' means perfect knowledge (samyag-jñāna), and a philosophy in which we have such knowledge is justly named sāṅkhya. Like the Nyāya-Vaiśeṣika system, the Sāṅkhya aims at the knowledge of reality for the practical purpose of putting an end to all pain and suffering. It gives us a knowledge of the self which is clearly higher than that given by the other systems, excepting perhaps the Vedānta. So it may very well be characterized as the 'sāṅkhya' in the sense of a pure metaphysical knowledge of the self. It is a metaphysic of dualistic realism. While the Nyāya and the Vaiśeṣika admit the ultimate reality of many entities—atoms, minds and souls—the Sāṅkhya recognizes only two kinds of ultimate realities, namely, spirit and matter (puruṣa and prakṛti). The nature of these two ultimate and other derivative realities will be considered in the Sāṅkhya metaphysics.

II. THE SĀṆKHYA METAPHYSICS

1. *Theory of Causation*¹

The Sāṅkhya Metaphysics rests mainly on its theory of causation which is known as *satkārya-vāda*. The specific question discussed here is this: Does an effect originally exist in the cause prior to its production, *i.e.*

The Buddha and the Nyāya-Vaiśeṣika theory of causation. appearance as an effect? The Bauddhas and the Nyāya-Vaiśeṣikas

answer this question in the negative. According to them, the effect cannot be said to exist before it is produced by some cause. If the effect already existed in the cause prior to its production, there is no sense in our speaking of it as being caused or produced in any way. Further, we cannot explain why the activity of any efficient cause is necessary for the production of the effect. If the pot already existed in the clay, why should the potter exert himself and use his implements to produce it? Moreover, if the effect were already in its material cause, it would logically follow that the effect is indistinguishable from the cause, and that we should use the same name for both the pot and the clay, and also that the same purpose would be served by a pot and a lump of clay. It cannot be said that there is a distinction of form between the effect and its material cause, for then we have to admit that there is something in the effect which is not to be found in its cause and, therefore, the effect does not really exist in the

¹ Vide *Sāṅkhya-kārikā* and *Tattvokaumudī*, 8-9; *Sāṅkhya-pravācana-bhāṣya*, 1. 113-21; *Aniruddha's Vṛtti*, 1. 113-21.

cause. This theory that the effect does not exist in the cause prior to its production is known as *asat-kārya-vāda* (i.e. the view that the *kārya* or the effect is *asat* or non-existent before its production).

The Sāṅkhyas repudiate this theory of causation and establish their view of *satkārya-vāda* on the following grounds: (a) If the effect were really non-existent in the cause, then no amount of effort on

The Sāṅkhya theory of *satkārya-vāda* and its grounds.

the part of any agent could bring it into existence. Can any man turn blue into red, or sugar into salt? Hence, when an effect is produced by some cause, we are to say that it pre-exists in the cause and is only manifested by certain conditions, as when oil is produced by pressing seeds. The activity of efficient causes, like the potter and his tools, is necessary to manifest the effect, pot, which exists *implicitly* in the clay. (b) We see that only certain causes can produce certain effects. Curd can be got only out of milk and a cloth only out of threads. This shows that the effect somehow exists in the cause. Had it not been so, any effect could be produced from any cause; the potter would not have taken clay to produce pots, instead of taking milk or threads or any other thing. (c) The fact that only a *potent* cause can produce a desired effect goes to show that the effect must be *potentially* contained in the cause. This means that the effect exists in the cause in an *unmanifested* form before its production or manifestation. (d) If the effect be really non-existent in the cause, then we have to say that, when it is produced, the non-existent comes into existence, i.e. something comes out of nothing,

which is absurd. (e) Lastly, we see that the effect is not different from, but essentially identical with, the cause. In fact, the effect and the cause are the explicit and implicit states of the same substance. A cloth is not really different from the threads, of which it is made; a statue is the same as its material cause, stone, with a new shape and form; the weight of a table is the same as that of the pieces of wood used in it. The conclusion drawn by the Sāṅkhya from all this is that the effect exists in the cause even before its production or appearance. This is the theory of *satkārya-vāda* (i.e. the view that the effect is existent before its appearance).

The theory of *satkārya-vāda* has got two different forms, namely, *paripāma-vāda* and *vivarta-vāda*. According to the former, when an effect is produced, there is a real transformation (*paripāma*) of the cause into the effect, e.g. the production of a pot from clay, or of curd from milk. The Sāṅkhya is in favour of this view as a further specification of the theory of *satkārya-vāda*. The second, which is accepted by the Advaita Vedāntins, holds that the change of the cause into the effect is merely apparent. When we see a snake in a rope, it is not the case that the rope is really transformed into a snake; what happens is that the rope only appears as, but is not really, a snake. So also, God or Brahman does not become really transformed into the world produced by Him, but remains identically the same, while we may wrongly think that He undergoes change and becomes the world.

2. *Prakṛti and the Guṇas*¹

The Sāṅkhya theory that causation means a real transformation of the cause into the effect logically leads to the concept of *prakṛti* as the ultimate cause of the

Prakṛti is the ultimate cause of the world of objects.

¹ Vide *Kārikā* and *Kaumudī*, 3, 10-16; *Pravacana-bhāṣya* and *Vṛtti*, 1, 110, 1, 122-37.

world of objects. All objects of the world, including our body and mind, the senses and the intellect, are limited and dependent things produced by the combination of certain elements. So we see that the world is a series of effects and that it must have a cause. What, then, is the cause of the world? It cannot be the *puruṣa* or the self, since the self is neither a cause nor an effect of anything. So the cause of the world must be the not-self, i.e. some principle which is other than and different from spirit, self or consciousness. Can this not-self be the physical elements or the material atoms? According to the *Cārvākas* or the materialists, the *Bauddhas*, the *Jainas* and the *Nyāya-Vaiśeṣikas*, the atoms of earth, water, light and air are the material causes of the objects of the world. The *Sāṅkhya* demurs to this on the ground that material atoms cannot explain the origin of the subtle products of nature, such as the mind, the intellect and the ego. So we must seek for something which can explain the gross objects of nature like earth and water, trees and seas, as well as its subtle products. Now it is a general rule that the cause is subtler than the effect and that it pervades the effect. Hence the ultimate cause of the world must be some unintelligent or unconscious principle which is uncaused, eternal and all-pervading, very fine and always ready to produce the world of objects. This is the *prakṛti* of the *Sāṅkhya* system. It is the first cause of all things and, therefore, has itself no cause. As the uncaused root-cause of all objects it is eternal and ubiquitous, because nothing that is limited and non-eternal can be the first cause of the world. Being the ground of

such subtle products of nature as mind and the intellect, prakṛti is a very subtle, mysterious and tremendous power which evolves and dissolves the world in a cyclic order.

The existence of prakṛti as the ultimate subtle cause of the world is known by inference

Proofs for the existence of prakṛti.

from the following grounds: (a) All particular objects of the world, from the intellect to the earth, are limited and dependent on one another. So there must be an unlimited and independent cause for their existence. (b) Things of the world possess certain common characters, due to which every one of them is capable of producing pleasure, pain and indifference. Therefore, they must have a common cause having these three characters. (c) All effects proceed from the activity of some cause which contains their potentiality within it. The world of objects which are effects must, therefore, be implicitly contained in some world-cause. (d) An effect arises from its cause and is again resolved into it at the moment of its destruction. That is, an existent effect is manifested by a cause, and eventually it is re-absorbed into the latter. So the particular objects of experience must arise from their particular causes, and these again from other general causes, and so on, till we come to the first cause of the world. Contrariwise, at the time of destruction, the physical elements must be resolved into atoms, the atoms into energies, and so on, till all products are resolved into the unmanifested, eternal prakṛti. Thus we get one unlimited and unconditioned, all-pervading and ultimate cause of the whole world including everything but the self. This is the eternal

and undifferentiated causal matrix of the world of not-self, to which the Sāṅkhya gives the different names of prakṛti, pradhāna, avyakta, etc. We should not imagine a cause of this ultimate cause, for that will land us in the fallacy of infinite regress. If there be a cause of prakṛti, then there must be a cause of that cause, and so on, *ad infinitum*. Or, if we stop anywhere and say that here is the first cause, then that first cause will be the prakṛti which is specifically described as the supreme root cause of the world (parā or mūlā prakṛti).¹

Prakṛti is constituted by the three guṇas of sattva, rajas and tamas. It is said to be the unity of the guṇas held in a state of equilibrium (sāmyāvasthā).

Prakṛti is constituted by three guṇas called sattva, rajas and tamas.

Now the question is: What are these guṇas? Guṇa here means a constituent element or substance and not an attribute or quality. Hence by the guṇas of sattva, rajas and tamas we are to understand the elements of the ultimate substance called prakṛti. The reason why they are called guṇas is either their being *subservient* to the ends of the puruṣa which is other than themselves, or their being intertwined like the three strands of a rope which binds the soul to the world.²

The guṇas are not perceived by us. They are inferred from the objects of the world which are their effects. Since there is an essential identity (tādātmya) between

Proofs for the existence of guṇas.

¹ Vide *Pravacana-bhāṣya*, I. 67-68, I. 76-77, 6.36.

² *Op. cit.*, I. 65. The word guṇa has many senses, such as 'quality,' 'strand,' 'subservient.'

the effect and its cause, we know the nature of the *gunas* from the nature of their products. All objects of the world, from the intellect down to the ordinary objects of perception (*e.g.* tables, pots, etc.), are found to possess three characters capable of producing pleasure, pain and indifference respectively. The same things are pleasurable to some person, painful to another, and neutral to a third. The cuckoo's cry is a pleasure to the artist, a pain to his sick friend, and neither to the plain rustic. A rose delights the youth, dejects the dying man and leaves the gardener cold and indifferent. Victory in war elates the victor, depresses the vanquished and leaves the third party rather apathetic. Now, as the cause must contain what is in the effect, we can infer that the ultimate cause of things must have been constituted also by the three elements of pleasure, pain and indifference. The Sāṅkhya calls these three *sattva*, *rajas* and *taamas* respectively. These are constitutive of both *prakṛti*, the ultimate substance, and the ordinary objects of the world.

Sattva is that element of *prakṛti* which is of the nature of pleasure, and is buoyant or light (*laghu*), and bright or illuminating (*prakāśaka*). The manifestation of objects in consciousness (*jñāna*), the tendency towards conscious manifestation in the senses, the mind and the intellect, the luminosity of light, and the power of reflection in a mirror or the crystal are all due to the operation of the element of *sattva* in the constitution of things. Similarly, all sorts of lightness in the sense of upward motion, like the blazing up of fire, the upward course

Sattva is of the nature of pleasure and is light and illuminating.

of vapour and the winding motion of air, are induced in things by the element of *sattva*. So also pleasure in its various forms, such as satisfaction, joy, happiness, bliss, contentment, etc. is produced by things in our minds through the operation of the power of *sattva* inhering in them both.

Rajas is the principle of activity in things. It always moves and makes other things move. That is, it is both mobile (*cala*) and stimulating (*upaṣṭambhaka*). It is on account of *rajas* that fire spreads, the wind blows, the senses follow their objects and the mind becomes restless. On the affective side of our life, *rajas* is the cause of all painful experiences and is itself of the nature of pain (*duḥkha*). It helps the element of *sattva* and *tamas*, which are inactive and motionless in themselves, to perform their functions.

Tamas is the principle of passivity and negativity in things. It is opposed to *sattva* in being heavy (*guru*) and in obstructing the manifestation of objects (*varaṇaka*). It also resists the principle of *rajas* or activity in so far as it restrains (*niyam*) the motion of things. It counteracts the power of manifestation in the mind, the intellect and other things, and thereby produces ignorance and darkness, and leads to confusion and bewilderment (*moha*). By obstructing the principle of activity in us it induces sleep, drowsiness, and laziness. It also produces the state of apathy or indifference (*viśāda*). Hence it is that *sattva*, *rajas* and *tamas* have been compared respectively to whiteness, redness and darkness.

With regard to the relation among the three guṇas

The guṇas are in the state of both conflict and co-operation with one another.

constituting the world, we observe that it is one of constant conflict as well as co-operation. They always go together and can never be separated from one another. Nor can any one of them produce anything without the help and support of the other two. Just as the oil, the wick and the flame, which are relatively opposed to one another, co-operate to produce the light of a lamp, so the guṇas co-operate to produce the objects of the world, although they possess different and opposed qualities. So all the three guṇas are present in everything of the world, great or small, fine or gross. But each of them tries to suppress and dominate the others. The nature of things is determined by the predominant guṇa, while the others are there in a subordinate position. We cannot point to anything of the world which does not contain within it all the three elements, of course, in different proportions. The classification of objects into good, bad and indifferent, or into pure, impure and neutral, or into intelligent, active and indolent, has reference to the preponderance of sattva, rajas and tamās respectively.

Another characteristic of the guṇas is that they are

They are subject to constant change and transformation.

constantly changing. "Change or transformation belongs to the very essence of the guṇas, and they cannot help changing even for a moment." There

Two kinds of transformation of the guṇas.

are two kinds of transformations which the guṇas undergo. During pralaya or dissolution of the world, the guṇas change, each within itself, without

disturbing the others. That is, *sattva* changes into *sattva*, *rajas* into *rajas*, and so too with *tamas*. Such transformation of the *guṇas* is called *sarūpa-pariṇāma* or change into the homogeneous. At this stage, the *guṇas* cannot create or produce anything, because they do not oppose and co-operate with one another. No object of the world can arise unless the *guṇas* combine, and one of them predominates over the others. So before creation, the *guṇas* exist as a homogeneous mass in which there is no motion (although there is transformation), no thing, and none of the qualities of sound, touch, colour, taste and smell. This is the state of equilibrium (*sāmyāvasthā*) for the *guṇas*, to which the Sāṅkhya gives the name of *prakṛti*. The other kind of transformation takes place when one of the *guṇas* dominates over the others which become subordinate to it. When this happens, we have the production of particular objects. Such transformation is called *virūpa-pariṇāma* or change into the heterogeneous, and it is the starting-point of the world's evolution.

3. *Puruṣa or the Self*¹

The second type of ultimate reality admitted by the Sāṅkhya is the self. The existence of the self must be admitted by all. Everybody feels and asserts that he or she exists, and has this or that thing belonging to him or her. The sense of 'I and mine' is the most natural and indubitable experience that we

¹ Vide *Vedāntasāra*, 51-59; *Kārikā* and *Kaumudī*, 17-20; *Pravacana-bhāṣya* and *Vṛtti*, 1.66, 1. 138-64, 5. 61-68.

all have. In fact, no one can seriously deny the existence of his self, for the act of denial presupposes the reality of the self. So it has been said by the Sāṅkhyas that the self exists, because it is self-manifest and its non-existence cannot be proved in any way.

But while there is general agreement with regard to the existence of the self, there is a wide divergence of opinion about its nature. Some Cārvākas or materialists identify the self with the gross body, some with the senses, some with life, and some others with the mind. The Buddhists and some empiricists regard the self as identical with the stream of consciousness. The Nyāya-Vaiśeṣikas and the Prabhākara Mimāṃsakas maintain that the self is an unconscious substance which may acquire the attribute of consciousness under certain conditions. The Bhāṭṭa Mimāṃsakas, on the other hand, think that the self is a conscious entity which is partially hidden by ignorance, as appears from the imperfect and partial knowledge that men have of their selves. The Advaita Vedānta holds that the self is pure eternal consciousness which is also a blissful existence (*saccidānanda-avarūpa*). It is one in all bodies, and is eternally free and self-shining intelligence.

According to the Sāṅkhyas, the self is different from the body and the senses, the manas and the intellect (*buddhi*). It is not anything of the world of objects. The self is not the brain, nor the nervous system, nor the aggregate of conscious states. The self is a conscious spirit which is always the subject of knowledge and can never become the object of any knowledge. It is not a substance with the attribute of consciousness, but it is pure consciousness *as such*. Consciousness is its very *essence* and not a mere *quality*.

The self is pure, eternal and all-pervading consciousness.

of it. Nor should we say that it is a blissful consciousness (ānandasvarūpa), as the Advaita Vedāntin thinks ; bliss and consciousness being different things cannot be the essence of the same reality. The self is the transcendent subject whose essence is pure consciousness. The light of the self's consciousness ever remains the same, although the objects of knowledge may change and succeed one another. It is a steady constant consciousness in which there is neither change nor activity. The self is above all change and activity. It is an uncaused, eternal and all-prevailing reality which is free from all attachment and unaffected by all objects. All change and activity, all pleasures and pains belong really to matter and its products like the body, mind and the intellect. It is sheer ignorance to think that the self is the body or the senses or the mind or the intellect. But when, through such ignorance, the self confuses itself with any of these things, it *seems* to be caught up in the flow of changes and activities, and merged in the mire of sorrows and miseries.

The existence of the self as the transcendent subject of experience is proved by the
 Proofs for the existence of the self. Sāṅkhya by several arguments:

(a) All objects of the world are means to the ends of other beings, because they are so many collocations of parts, like chairs, tables, etc.
 (b) These beings whose purpose is served by the things of the world must be quite different and distinct from them all. That is, they cannot be said to be unconscious things, made up of parts like physical objects, for that would make them means to the ends of others

and not ends in themselves. (c) All material objects must be controlled and directed by some intelligent principle in order that they can achieve anything or realize any end. A machine or a car does its work when put under the guidance of some person. So there must be some selves who guide the operations of prakṛti and her products. (d) Pleasure and pain, with which the world is found to abound, are meaningless if there be no conscious subjects *who enjoy or suffer* them. (e) Some persons at least of this world make a sincere endeavour to attain final release from all suffering. This is not possible for anything of the physical world, for, by its very nature, the physical world causes suffering rather than relieve it. So there must be some immaterial substances or *selves* transcending the physical order. Otherwise, the concept of liberation or salvation and the will to liberate or to be liberated as found in saints and the saviours of mankind would be meaningless.

There is not, as the Advaita Vedāntin says, one universal self pervading all bodies alike. On the other hand, we must admit a plurality of selves, of which one is connected with each body. That there are many selves in the world follows from the following considerations: (a) There is an obvious difference in the birth and death, and the *sensory and motor endowments* of different individuals. The birth or death of one individual does not mean the same for all other individuals. Blindness or deafness in one man does not imply the same for all men. But if all persons had one and the same self, then the birth and death

Proofs for the
reality of many selves.

of one would cause the birth and death of all, and the blindness or deafness of one would make all others blind or deaf. Since, however, that is not the case, we are to say that there is not one but many selves. (b) If there were but one self for all living beings, then the *activity* of any one must make all others active. But as a matter of fact, when we sleep, others make restless efforts, and *vice versa*. (c) Men and women are different from the gods, on the one hand, and birds and beasts, on the other. But there could not have been these distinctions, if gods and human beings, birds and beasts possessed the *same* self. Thus we see that there must be a *plurality* of selves, which are eternal and intelligent subjects of knowledge, as distinguished from prakṛti which is one, eternal and non-intelligent ground of the objects of knowledge.

4. *Evolution of the World*¹

Prakṛti evolves the world of objects when it comes into relation with the puruṣa. The evolution of the world has its starting-point in the contact between puruṣa and prakṛti. The evolution of the world has its starting-point in the contact (samyoga) between puruṣa or the self and prakṛti or primal matter. There can be no evolution unless the two become somehow related to each other. The evolution of the world cannot be due to the self alone, for it is inactive ; nor can it be due to matter (prakṛti) alone, for it is non-intelligent. The activity of

¹ Vide Kārikā and Kaumudī, 21-41; *Pratīcāna-bhāṣya* and *Vṛtti*, 1. 64-74, 2. 10-32.

prakṛti must be guided by the intelligence of puruṣa, if there is to be any evolution of the world. It is only when puruṣa and prakṛti co-operate that there is the creation of a world of objects. But the question is: How can two such different and opposed principles like puruṣa and prakṛti co-operate? What brings the one in contact with the other? The answer given by the Sāṅkhya is this: Just as a blind man and a lame man can co-operate in order to get out of a forest, so the non-intelligent prakṛti and the inactive puruṣa combine and co-operate to serve their respective interests. Prakṛti requires the presence of puruṣa in order to be known or appreciated by someone (darśan-ārtham), and puruṣa requires the help of prakṛti in order to discriminate itself from the latter and thereby attain liberation (kaivalyārtham).

With the contact between puruṣa and prakṛti, there is a disturbance of the equilibrium in which the guṇas were held before creation. One of the guṇas, namely rajas, which is naturally active, is disturbed first, and then, through rajas, the other guṇas begin to vibrate. This produces a tremendous commotion in the infinite bosom of prakṛti and each of the guṇas tries to preponderate over the rest. There is a gradual differentiation and integration of the three guṇas, and as a result of their combination in different proportions, the various objects of the world originate. The course of evolution is as follows:

The first product of the evolution of prakṛti is mahat or buddhi.¹ Considered in its cosmic aspect, it

This contact disturbs the original equilibrium of prakṛti.

¹ Vide Sāṅkhya-sūtr., I. 71.

is the great germ of this vast world of objects

The first product of evolution is mahat or buddhi. and is accordingly called mahat or the great one. In its psycho-

logical aspect, i.e. as present in individual beings, it is called buddhi or the intellect. The special functions of buddhi are ascertainment and decision. It is by means of the intellect that the distinction between the subject and other objects is understood, and one makes decisions about things. Buddhi arises out of the preponderance of the element of sattva in prakṛti. It is the natural function of buddhi to manifest itself and other things. In its pure (sāttvika) condition, therefore, it has such attributes as virtue (dharma), knowledge (jñāna), detachment (vairāgya) and excellence (aiśvaryya). But when vitiated by tamas, it has such contrary attributes as vice (adharma), ignorance (ajñāna), attachment (āśakti or avairāgya) and imperfection (aśakti or anaiśvaryya). Buddhi is different from puruṣa or the self which transcends all physical things and qualities. But it is the ground of all intellectual processes in all individual beings. It stands nearest to the self and reflects the consciousness of the self in such a way as to become apparently conscious and intelligent. While the senses and the mind function for buddhi or the intellect, the latter functions directly for the self and enables it to discriminate between itself and prakṛti.¹

Ahaṅkāra or the ego is the second product of

The second is prakṛti, which arises directly out of ahaṅkāra or the ego. of mahat, the first manifestation.

The function of ahaṅkāra is the feeling of 'I and

¹ Vide Kārikā, 36-37; Sāṅkhya-sūtr., 2. 40-43.

mine' (abhimāna). It is on account of ahaṅkāra that the self considers itself (wrongly indeed) to be an agent or a cause of actions, a desirer of and striver for ends, and an owner of properties. We first perceive objects through the senses. Then the mind reflects on them and determines them specifically as of this or that kind. Next there is an appropriation of those objects as belonging to and intended for me, and also a feeling of my self as somehow concerned in them. Ahaṅkāra is just this sense of the self as 'I' (aham), and of objects as 'mine' (mama). When ahaṅkāra thus determines our attitude towards the objects of the world, we proceed to act in different ways in relation to them. The potter constructs a pot when he accepts it as one of his ends and resolves to attain it by saying within himself: 'Let me construct a pot.'

Ahaṅkāra is said to be of three kinds, according to the predominance of one or other of the three guṇas. It is called *vaikārika* or *sāttvika* when the element of *sattva* predominates in it, *taijasa* or *rājasa* when that of *rajas* predominates, and *bhūtādi* or *tāmasa* when *tamas* predominates. From the first arise the eleven organs, namely, the five organs of perception (*jñānendriya*), the five organs of action (*karmendriya*), and the mind (*manas*). From the third (*i.e.* *tāmasa* *ahaṅkāra*) are derived the five subtle elements (*tanmātras*). The second (*viz.* *rājasa*) is concerned in both the first and the third, and supplies the energy needed for the change of *sattva* and *tamas* into their products.

There are three kinds of ahaṅkāra.

The above order of development from *ahaṅkāra* is laid down in the *Sāṅkhya-kārikā* and accepted by Vācaspati Miśra.¹ *Vijñānabhikṣu*,² however, gives a different order. According to him, *manas* or the mind is the only sense which is pre-eminently *sāttvika* or manifesting, and is, therefore, derived from *sāttvika ahaṅkāra*. The other ten organs are developed from *rājasa ahaṅkāra*, and the five subtle elements from the *tāmasa*. The Vedānta view is similar to that held by Vācaspati.

The five organs of perception (*buddhindriya*) are the senses of sight, hearing, smell, taste and touch. These perceive respectively the physical qualities of colour, sound, smell, taste and touch, and are developed from *ahaṅkāra* for the enjoyment of the self. It is the self's desire to enjoy objects that creates both the objects of, and the organs for, enjoyment. The organs of action (*karmendriya*) are located in the mouth, hands, feet, anus and the sex organ. These perform respectively the functions of speech, prehension, locomotion, evacuation and reproduction. The *real* organs are not the perceptible external organs, like the eye-balls, ear-holes, skin, hands, feet, etc. There are certain imperceptible powers (*śakti*) in these perceptible end-organs which apprehend physical objects and act on them, and are, therefore, to be regarded as the organs (*indriyas*) proper. As such, an *indriya* cannot be sensed or perceived, but must be known by inference.³

The mind (*manas*) is the central organ which partakes of the nature of the organs of both knowledge and action.

Without the guidance of the *manas* neither of them can function in relation to their objects. The *manas* is a very subtle sense indeed, but it is made up of parts, and so can come into contact with several senses at the same time. The mind, the ego and the intellect (*manas*, *ahaṅkāra* and *buddhi*) are the three internal organs (*antahkaraṇa*), while the

The *antahkaraṇas* and *bāhyakaraṇas*. the organs of sight, hearing, etc. and the organs of action are called the external organs (*bāhyakaraṇa*). The vital breaths or

¹ Cf. *Kārikā* and *Kaumudī*, 25.

² Cf. *Pravacana-bhāṣya*, 2. 18.

³ Cf. *Sāṅkhya-sūtr.*, 2. 23; *Kārikā* and *Kaumudī*, 26 and 28.

processes are the functions of the internal organs. The ten external organs condition the function of the internal ones. The mind (*manas*) interprets the indeterminate sense-data supplied by the external organs into determinate perceptions; the ego owns the perceived objects as desirable ends of the self or dislikes them; and the intellect decides to act to attain or avoid those objects. The three internal and the ten external organs are collectively called the thirteen *karapas* or organs in the Sāṅkhya philosophy. While the external organs are limited to present objects, the internal ones deal with the past, present and future.¹

The Sāṅkhya view of the *manas* and other organs has certain obvious differences from those of the other systems. According to the Nyāya-Vaiśeṣikas *manas* is an eternal atomic substance which has neither parts nor any simultaneous contact with many senses. So we cannot have many experiences—many perceptions, desires and volitions—at the same time. For the Sāṅkhyas, the *manas* is neither atomic nor eternal, but a composite product of *prakṛti*, and so subject to origin and destruction in time. It is also held by them that we may have many experiences—sensation, perception, feeling and volition—at the same time, although ordinarily our experiences come one after the other. The Nyāya-Vaiśeṣikas admit only the *manas* and the five external senses as *indriyas* and hold that the external senses are derived from the physical elements (*mahābhūta*). The Sāṅkhyas enumerate eleven *indriyas*, e.g. the *manas*, the five sensory organs and the five motor organs, and derive them all from the ego (*ahaṅkāra*), which is not recognized as a separate principle by the other systems. The Vedāntins treat the five vital breaths (*pañca-prāṇa*) as independent principles, while the Sāṅkhyas reduce them to the general functions of *antaḥkaraṇa*.²

The five *tanmātras* are the potential elements or generic essences of sound, touch, colour, taste and smell. These are very subtle and cannot be ordinarily perceived.

¹ Cf. *Sāṅkhya-sūtr.*, 2. 26-32, 3. 38, 5. 71; *Kārikā* and *Kaumudī*, 27, 29-30, 32-33.

² Cf. *Sāṅkhya-sūtr.*, 2. 20-22, 2. 31-32, 5. 84; *Kārikā*, 24 and 29-30.

We know them by inference, although the yogins may have a perception of them. The gross physical elements arise from the *tanmātras* as follows :

(i) From the essence of sound (śabdatanmātra) is produced *ākāśa* with the quality of sound which is perceived by the ear. (ii) From the essence of touch (sparsātanmātra) combined with that of sound, arises air with the attributes of sound and touch. (iii) Out of the essence of colour (rūpatanmātra) as mixed with those of sound and touch, there arises light or fire with the properties of sound, touch and colour. (iv) From the essence of taste (rasatanmātra) combined with those of sound, touch and colour, is produced the element of water with the qualities of sound, touch, colour and taste. (v) The essence of smell (gandhatanmātra) combined with the other four gives rise to earth which has all the five qualities of sound, touch, colour, taste and smell. The five physical elements of *ākāśa*, air, light, water and earth have respectively the specific properties of sound, touch, colour, taste and smell. In the order in which they occur here, the succeeding element has the special qualities of the preceding ones added to its own, since their essences go on combining progressively.¹

The whole course of evolution from *prakṛti* to the gross physical elements is distinguished into two kinds, namely, the psychical (pratyayasarga or buddhisarga) and the physical (tanmātrasarga or bhautika-sarga). The first includes the developments of *prakṛti*

Two kinds of evolution, viz. the psychical and the physical.

¹ Cf. *Kārikā* and *Kaumudī*, 22.

as buddhi, ahaṅkāra and the eleven sense-motor organs. The second is constituted by the evolution of the five subtle physical essences (tanmātra), the gross elements (mahābhūta) and their products. The tanmātras, being supersensible and unenjoyable to ordinary beings, are called *aviśeṣa*, i.e. devoid of specific perceptible characters. The physical elements and their products, being possessed of specific characters, pleasurable or painful or stupefying, are designated as *viśeṣa* or the specific. The *viśeṣas* or specific objects are divided into three kinds, namely, the gross elements, the gross body born of parents (*sthūlaśarīra*) and the subtle body (*sūkṣma* or *līṅga śarīra*). The gross body is composed of the five gross elements, although some think that it is made of four elements or of only one element. The subtle body is the combination of buddhi, ahaṅkāra, the eleven sense-motor organs and the five subtle elements (tanmātra). The gross body is the support of the subtle body, in so far as the intellect (buddhi), the ego (ahaṅkāra) and the senses cannot exist without some physical basis. According to Vācaspati, there are only these two kinds of bodies as mentioned before. Viṇṇāna-bhikṣu, however, thinks that there is a third kind of body called the *adhiṣṭhāna* body which supports the subtle one when it passes from one gross body into another.¹

The history of the evolved universe is a play of twenty-four principles, of which prakṛti is the first, the five gross elements are the last, and the thirteen organs (karaṇas) and five tanmātras are the intermediate ones. But it is not complete in itself, since it has a necessary reference to the world of selves as the witnesses and enjoyers thereof. It is not the dance of blind atoms, nor the push and pull of mechanical forces, which produce a world to no purpose. On the other hand, it serves the most fundamental ends of the moral, or better, the spiritual, life. If the spirit

¹ Cf. *Kārikā and Kumārī*, 3-41; *Sāṅkhya-sūtra*, 3. 1-17; *Pravacana-bhāṣya*, 3. 11.

be a reality, there must be proper adjustment between moral deserts, and the joys and sorrows of life. Again, the history of the world must be, in spite of all appearances to the contrary, the progressive realization of the life of spirit. In the Sāṅkhya, the evolution of prakṛti into a world of objects makes it possible for spirits to enjoy or suffer according to their merits or demerits. But the ultimate end of the evolution of prakṛti is the freedom (mukti) of self. It is through a life of moral training in the evolved universe that the self realizes its true nature. What that nature is and how it can be realized we shall consider presently. Now the evolution of prakṛti in relation to the puruṣa may be represented by the following table :

III. THE SĀṆKHYA THEORY OF KNOWLEDGE ¹

The Sāṅkhya theory of knowledge follows in the main its dualistic metaphysics. It accepts only three independent sources of valid knowledge (pramāṇa). These are perception, inference and scriptural testimony (śabda). The other sources of

¹ Vide *Kārikā* and *Keumudī*, 4-6; *Pravacana-bhāṣya*, 1. 87-89, 99-103; 5. 27, 37, 42-51. Cf. *The Nyāya Theory of Knowledge* (Ch. V ante) for a fuller account of this subject.

knowledge, like comparison, postulation (arthāpatti) and non-cognition (anupalabdhi), are included under these three, and not recognized as separate sources of knowledge.

Valid knowledge (pramā) is a definite and an unerring cognition of some object (arthaparicchitti) through the modification of buddhi or the intellect which reflects the consciousness of the self in it. What we call the mind or the intellect is an unconscious material entity in the Sāṅkhya philosophy. Consciousness or intelligence (caitanya) really belongs to the self. But the self cannot immediately apprehend the objects of the world. If it could, we should always know all objects, since the self in us is not finite and limited, but all-pervading. The self knows objects through the intellect, the manas, and the senses. We have a true knowledge of objects when, through the activity of the senses and the manas, their forms are impressed on the intellect which, in its turn, reflects the light or consciousness of the self.

In all valid knowledge there are three factors, namely, the subject (pramātā), the object (prameya), and the ground or source of knowledge (pramāṇa). The subject being a conscious principle is no other than the self as pure consciousness (śuddha cetana). The modification (vṛtti) of the intellect, through which the self knows an object, is called pramāṇa. The object presented to the self through this modification is the prameya. Pramā or valid knowledge is the reflection of the self in the intellect as modified into the

Nature and condition
of valid knowledge.

The factors of valid
knowledge.

form of the object, because without the self's consciousness the unconscious intellect cannot cognise anything.

Perception is the direct cognition of an object through its contact with some sense. When an object like the table comes within the range of your vision, there is contact between the table and your eyes. The table produces certain impressions or modifications in the sense organ, which are analysed and synthesised by manas or the mind. Through the activity of the senses and the mind, buddhi or the intellect becomes modified and transformed into the shape of the table. The intellect, however, being an unconscious material principle, cannot by itself know the object, although the form of the object is present in it. But as the intellect has an excess of *sattva*, it reflects, like a transparent mirror, the consciousness of the self (*puruṣa*). With the reflection of the self's consciousness in it, the unconscious modification of the intellect into the form of the table becomes illumined into a conscious state of perception. Just as a mirror reflects the light of a lamp and thereby manifests other things, so the material principle of buddhi, being transparent and bright (*sāttvika*), reflects the consciousness of the self and illuminates or cognises the objects of knowledge.

It is to be observed here that the reflection theory of knowledge has been explained in two different ways by Vācaspati Miśra and Vijñānabhikṣu. We have followed the former in the account of the knowledge-process given above. Vācaspati thinks that the knowledge of an object takes place when there is reflection of the self in the

intellect which has been modified into the form of the object. According to Vijñānabhikṣu, the process of perceptual knowledge is like this: When any object comes in contact with its special sense organ, the intellect becomes modified into the form of the object. Then because of the predominance of sattva in it, the intellect reflects the conscious self and seems to be conscious, in the same way in which a mirror reflects the light of a lamp and becomes itself luminous and capable of manifesting other objects. But next, the intellect, which is thus modified into the form of the object, is reflected back in the self. That is, the object is presented to the self through a mental modification corresponding to the form of the object. Thus on Vācaspati's view, there is a reflection of the self in the intellect, but no reflection of the intellect back into the self. Vijñānabhikṣu, on the other hand, thinks that there is a reciprocal reflection of the self in the intellect and of the intellect in the self. This view is accepted also in Vedavyāsa's commentary on the *Yoga-Sūtra*.¹ What induces Vijñānabhikṣu to suppose that the modified intellect is reflected in the self is perhaps the necessity of explaining the self's experience of pleasure and pain. The self, being pure consciousness, free from all pleasure and pain, cannot be subjected to these experiences. It is the intellect which really enjoys pleasure and suffers pain. So, the apparent experiences of pleasure and pain in the self should be explained by some sort of reflection of the intellect in the self.

There are two kinds of perception, namely, nirvi-

Nirvikalpaka and savikalpaka or the indeterminate and savikalpaka or the determinate.
 Nirvikalpaka and savikalpaka perceptions.

The first arises at the first moment of contact between a sense and its object, and is antecedent to all mental analysis and synthesis of the sense-data. It is accordingly called *ālōcana* or a mere sensing of the object. In it there is a cognition of the object as a mere something without any recognition of it as this or that kind of thing. It is an un verbalised experience like those of the

¹ / *Vide Pradāna-bhāṣya*, 1: 39; *Vyāsa-bhāṣya*, 4: 22.

infant and the dumb. Just as babies and dumb persons cannot express their experiences in words, so we cannot communicate this indeterminate perception of objects to other people by means of words and sentences. The second kind of perception is the result of the analysis, synthesis and interpretation of sense-data by *manas* or the mind. So it is called *vivecana* or a judgment of the object. It is the determinate cognition of an object as a particular kind of thing having certain qualities and standing in certain relations to other things. The determinate perception of an object is expressed in the form of a subject-predicate proposition, e.g. 'this is a cow,' 'that rose is red.'¹

Inference is the knowledge of one term of a relation, which is not perceived, through the other which is perceived and known to be invariably related to the first. In it what is perceived leads us on to the knowledge of what is unperceived through the knowledge of a universal relation (*vyāpti*) between the two. We get the knowledge of *vyāpti* between two things from the repeated observation of their concomitance. One single instance of their relation is not, as some logicians wrongly think, sufficient to establish the knowledge of a universal relation between them.

With regard to the classification of inference, the Sāṅkhya adopts the Nyāya view, although in a slightly different form. Inference is first divided into two kinds, namely, *vāta* and *avāta*. It is called

¹ For a fuller account of *nirvikalpaka* and *savikalpaka* perceptions, vide S. C. Chatterjee, *The Nyāya Theory of Knowledge*, Ch. IX.

vāta or affirmative when it is based on a universal affirmative proposition, and avāta or negative when based on a universal negative proposition. The vāta is subdivided into the pūrvavat and the sāmānyatodṛṣṭa. A pūrvavat inference is that which is based on the *observed* uniformity of concomitance between two things. This is illustrated when one infers the existence of fire from smoke because he has observed that smoke is always accompanied by fire. Sāmānyatodṛṣṭa inference, on the other hand, is not based on any observation of the concomitance between the middle and the major term, but on the similarity of the middle with such facts as are uniformly related to the major. How do we know that we have the visual and other senses? It cannot be by means of perception. The senses are supersensible. We have no sense to perceive our senses with. Therefore, we are to know the existence of the senses by an inference like this: "All actions require some means or instruments, *e.g.* the act of cutting; the perceptions of colour, etc. are so many acts; therefore, there must be some means or organs of perception." It should be noted here that we infer the existence of organs from acts of perception, not because we have *observed* the organs to be invariably related to perceptive acts, but because we know that perception is an action and that an action requires a means of action. The other kind of inference, namely, avāta is what some Naiyāyikas call śeṣavat or pariśeṣa inference. It consists in proving something to be true by the elimination of all other alternatives to it. This is illustrated when one argues that sound must be a quality because it cannot be a

substance or an activity or a relation or anything else. As regards the logical form of inference, the Sāṅkhyas admit, like the Naiyāyikas, that the five-membered syllogism is the most convincing form of inferential proof.¹

The third pramāṇa is śabda or testimony. It is constituted by authoritative statements (āptavacana), and gives us the knowledge of objects which cannot be known by perception and inference. A statement is a sentence made up of words arranged in a certain way. A word is a sign which denotes something (vācaka), and its meaning (artha) is the thing denoted by it (vācya). That is, a word is a symbol which stands for some object. The understanding of a sentence requires the understanding of the meanings of its constituent words. Śabda is generally said to be of two kinds, namely, laukika and vaidika. The first is the testimony of ordinary trustworthy persons. This, however, is not recognized in the Sāṅkhya as a separate pramāṇa, since it depends on perception and inference. It is the testimony of Śruti or the Vedas that is to be admitted as the third independent pramāṇa. The Vedas give us true knowledge about supersensuous realities which cannot be known through perception and inference. As not made by any person, the Vedas are free from all defects and imperfections that must cling to the products of personal agencies. They are, therefore, infallible, and possess self-evident validity. The Vedas embody the intuitions of enlightened seers (ṛṣis). These intuitions, being universal

¹ Vide p. 205 ante. For an elaborate account of the theory of inference, vide S. C. Chatterjee, *The Nyāya Theory of Knowledge*, Bk. III.

and eternal experiences, are not dependent on the will or consciousness of individual persons. As such, the Vedas are impersonal (*apauruṣeya*). Yet they are not eternal, since they arise out of the spiritual experiences of seers and saints, and are conserved by a continuous line of instruction from generation to generation.

IV. THE DOCTRINE OF LIBERATION¹

Our life on earth is a mixture of joys and sorrows. There are indeed many pleasures of life, and also many creatures who have a good share of them. But many more are the pains and sufferings of life, and all living beings are more or less subject to them. Even if it be possible for any individual being to shun all other pains and miseries, it is impossible for him to evade the clutches of decay and death. Ordinarily,

The three kinds of pains, *Ādhyātmika*, *Ādhibhautika* and *Ādhidaivika*.

however, we are the victims of three kinds of pains, viz. the *ādhyātmika*, *ādhibhautika* and *ādhidaivika*.

The first is due to intra-organic causes like bodily disorders and mental affections. It includes both bodily and mental sufferings, such as fever and headache, the pangs of fear, anger, greed, etc. The second is produced by extra-organic natural causes like men, beasts, thorns, etc. Instances of this kind are found in cases of murder, snake-bite, prick of thorns and so forth. The third kind of suffering is caused by extra-organic supernatural causes, e.g. the pains inflicted by ghosts, demons, etc.

¹ Vide *Kārikā* and *Kaumudī*. 14-68; *Sāṅkhya-sūtr.*, *Prasacona-bhāṣya* and *Vṛtti*, 3. 65-84.

Now all men earnestly desire to avoid every kind of pain. Nay more, they want, once for all, to put an end to all their sufferings, and have enjoyment at all times. But that is not to be. We cannot have pleasure only and exclude pain altogether. So long as we are in this frail body with its imperfect organs, all pleasures are bound to be mixed up with pain or, at least, be temporary. Hence we should give up the hedonistic ideal of pleasure and rest content with the less attractive but more rational end of freedom from pain. In the Sāṅkhya system, liberation (mukti) is just the absolute and complete cessation of all pain without a possibility of return. It is the ultimate end or the *summum bonum* of our life (*apavarga* or *puruṣārtha*).

How are we to attain liberation or absolute freedom from all pain and suffering? All the arts and crafts of the modern man and all the blessings of modern science give us but temporary relief from pain or short-lived pleasures. These do not ensure a total and final release from all the ills to which our mind and body are subject. So the Indian philosopher wants some other more effective method of accomplishing the task, and this he finds in the right knowledge of reality (*tattvajñāna*). It is a general rule that our sufferings are due to our ignorance. In the different walks of life we find that the ignorant and uneducated man comes to grief on many occasions because he does not

All men want to get rid of pain.

Sāṅkhya mukti or liberation is the absolute cessation of all pain.

Ignorance is the cause of suffering. So freedom from suffering is to be attained through right knowledge.

know the laws of life and nature. The more knowledge we have about ourselves and the world we live in, the better fitted are we for the struggle for existence and the enjoyments of life. But the fact remains that we are not perfectly happy, nor even completely free from pain and misery. The reason for this is that we have not the perfect knowledge about reality. When we have that knowledge, we shall attain freedom from all suffering. Reality is, according to the

Sāṅkhya, a plurality of selves and the world of objects presented to them. The self is an intelligent

The nature and constitution of reality.

principle which does not possess any quality or activity but is a pure consciousness free from the limitations of space, time and causality. It is the pure subject which transcends the whole world of objects including physical things and organic bodies, the mind and the senses, the ego and the intellect. All changes and activities, all thoughts and feelings, all pleasures and pains, all joys and sorrows belong to what we call the mind-body system. The self is quite distinct from the mind-body complex and is, therefore, beyond all the affections and afflictions of the psychical life. Pleasure and pain are mental facts which do not really colour the pure self. It is the mind, and not the self, that feels pleasure or pain, and is happy or unhappy. So also, virtue and vice, merit and demerit, in short, all moral properties belong to the ego (*abhaṅkāra*) who is the striver and doer of all acts.¹ The self is different from the ego or the moral agent who strives for good or bad ends, attains them and enjoys or suffers accordingly. Thus we see

¹ Cf. *Sāṅkhya-sūtr.* and *Vṛtti*, 5, 25-26.

that the self is the transcendent subject whose very essence is pure consciousness, freedom, eternity and immortality. It is pure consciousness (*jñānasvarūpa*) in the sense that the changing states and processes of the mind, which we call empirical consciousness, do not belong to the self. The self is the *subject* or *witness* of mental changes as of bodily and physical changes, but is as much distinct from the former as from the latter. It is freedom itself in so far as it is above the space-time and the cause-effect order of existence. It is eternal and immortal, because it is not produced by any cause and cannot be destroyed in any way.¹

Pleasure and pain, joy and sorrow really belong to buddhi or the intellect and the mind. The puruṣa or self is by its nature free from them all. But on account of ignorance it fails to distinguish itself from the mind and the intellect, and owns them as parts of itself so much so that it identifies itself with the body, the senses, the mind and the intellect. It becomes, so to say, *somebody* with a certain name, and a particular 'combination of talent, temperament and character.' As such, we speak of it as the 'material self,' the 'social self,' the 'sensitive and appetitive self,' the 'imagining and desiring self,' or the 'willing and thinking self.'² According to the Sāṅkhya, all these are not-self which reflects the pure self and apparently imparts its

¹ Cf. *Pravacana-bhāṣya*, I. 146-48.

² For an account of the different kinds of selves, vide James, *Principles of Psychology*, Vol. I, Chap. X, and Ward, *Psychological Principles*, Chap. XV.

affections and emotions to the latter. The self considers itself to be happy or unhappy when the mind and the intellect, with which it identifies itself, become so, in the same way in which a father considers himself fortunate or unfortunate in view of his beloved son's good or bad luck, or a master feels insulted by an insult to his own servant. It is this want of discrimination or feeling of identity (*aviveka*) between the self and the mind-body that is the cause of all our troubles. We suffer pain and enjoy pleasure because the experiencing subject in us (*draṣṭā*) wrongly identifies itself with the experienced objects (*dṛśya*) including pleasure and pain.¹

The cause of suffering being ignorance (*ajñāna*) in the sense of non-discrimination (*aviveka*) between the self and the not-self, freedom from suffering must come from knowledge of the distinction between the two (*vivekajñāna*).² But this saving knowledge is not merely an intellectual understanding of the truth. It must be a direct knowledge or clear realization of the fact that the self is not the body and the senses, the mind and the intellect. Once we realize or see that our self is the unborn and undying spirit in us, the eternal and immortal subject of experience, we become free from all misery and suffering. A direct knowledge of the truth is necessary to remove the illusion of the body or the mind as my self. Now I have a direct and an undoubted perception that I am a particular psycho-physical organism.

¹ Cf. *Kārikā* and *Kaumudī*, 62 ; *Prasacana* and *Vṛtti*, 3, 72.

² Cf. *Kārikā* and *Kaumudī*, 44, 63 ; *Sāṅkhya-sūtr.* and *Vṛtti*, 3, 23-24.

The knowledge that the self is distinct from all this must be an equally direct perception, if it is to contradict and cancel the previous one. The illusory perception of snake in a rope is not to be sublated by any argument or instruction, but by another perception of the rope as such. To realize the self we require a long course of spiritual training with devotion to, and constant contemplation of, the truth that the spirit is not the body, the senses, the mind or the intellect.¹ We shall consider the nature and methods of this training when we come to the Yoga philosophy.

When the self attains liberation, no change takes place in it and no new property or quality accrues to it. Liberation or freedom of the self does not mean the development from a less perfect to a more perfect condition. So also, immortality and eternal life are not to be regarded as future possibilities or events in time. If these were events and temporal acquisitions, they would be governed by the laws of time, space and causality, and, as such, the very opposite of freedom and immortality. The attainment of liberation means just the clear recognition of the self as a reality which is beyond time and space, and above the mind and the body, and, therefore, essentially free, eternal and immortal.² When there is such realization, the self ceases to be affected by the vicissitudes of the body and the mind, and rests in itself as the disinterested witness of physical and psychical changes. "Just as the dancing girl ceases to dance after having entertained the spectators, so *prakṛti* ceases to act and evolve

¹ Cf. *Sāṅkhya-sūtr.* and *Vṛtti*, 3. 66 and 75 ; *Kārikā* and *Raumudī*, 61.

² Cf. *Sāṅkhya-sūtr.* and *Vṛtti*, 5. 74-83 ; *Sāṅkhya-sūtr.*, 1. 56, 6. 20.

the world after manifesting her nature to the self." ¹ It is possible for every self to realize itself in this way

Two kinds of mukti, viz. jīvanmukti and videhamukti. and thereby attain liberation in life in this world. This kind of

liberation is known as jīvanmukti or emancipation of the soul while living in this body. After the death of its body, the liberated self attains what is called videhamukti or emancipation of the spirit from all bodies, gross and subtle. This ensures absolute and complete freedom.² Vijñāna-bhikṣu, however, thinks that the latter is the real kind of liberation, since the self cannot be completely free from the influence of bodily and mental changes so long as it is embodied." But all Sāṅkhyas agree that liberation is only the complete destruction of the three-fold misery (duḥkha-trayā-bhigāta). It is not a state of joy as conceived in the Vedānta. Where there is no pain, there can neither be any pleasure; because the two are relative and inseparable.

V. THE PROBLEM OF GOD³

The attitude of the Sāṅkhya towards theism has been the subject of controversy among its commentators and interpreters. While some of them clearly repudiate the belief in God, others take

Controversy among Sāṅkhyas with regard to God's existence.

¹ Cf. *Kārikā* and *Kaumudī*, 59, 65-66.

² Cf. *Kārikā* and *Kaumudī*, 67-68; *Sāṅkhya-sūf.* and *Vṛtti*, 3, 78-84.

³ Cf. *Pravacana-bhāṣya*, 3, 76-84, 5, 116.

⁴ Cf. *Kārikā* and *Kaumudī*, 56-57; *Sāṅkhya-sūf.*, *Vṛtti* and *Pravacana*, 1, 92-95, 3, 56-57, 5, 2-12. Vide also Gaudapāda, *Sāṅkhya-kārikā-bhāṣya*, and A. K. Majumdar, *The Sāṅkhya Conception of Personality*, Chapters I and II.

great pains to make out that the Sāṅkhya is no less theistic than the Nyāya. The classical Sāṅkhya argues against the existence of God on the following grounds : (a) That the world as a system of effects must have a cause is no doubt true. But God or Brahman cannot be the cause of the world.

Anti-theistic proofs of
the classical Sāṅkhya.

God is said to be the eternal and immutable self ; and what is unchanging cannot be the active cause of anything. So it follows that the ultimate cause of the world is the eternal but ever-changing (*pariṇāmī*) prakṛti or matter. (b) It may be said that prakṛti being non-intelligent must be controlled and directed by some intelligent agent to produce the world. The individual selves are limited in knowledge and, therefore, cannot control the subtle material cause of the world. So there must be an infinitely wise being, i.e. God, who directs and guides prakṛti. But this is untenable. God, as conceived by the theists, does not act or exert Himself in any way ; but to control and guide prakṛti is to act or do something. Supposing God is the controller of prakṛti, we may ask : What induced God to control prakṛti and thereby create the world ? It cannot be any end of His own, for a perfect being cannot have any unfulfilled desires and unattained ends. Nor can it be the good of His creatures. No prudent man bothers himself about the welfare of other beings without his own gain. As a matter of fact, the world is so full of sin and suffering that it can hardly be said to be the work of God who had the good of His creatures in view when He created. (c) The belief in God is

inconsistent with the distinctive reality and immortality of individual selves (jīva). If the latter be included within God as His parts, they ought to have some of the divine powers, which, however, is not the case. On the other hand, if they are created by God, they must be subject to destruction. The conclusion drawn from all this is that God does not exist and that prakṛti is the sufficient reason for there being a world of objects. Prakṛti creates the world unconsciously for the good of the individual selves (puruṣa) in the same way in which the milk of the cow flows unconsciously through her udder for the nourishment of the calf.

According to another interpretation of the Sāṅkhya, which is not generally accepted, this system is not atheistic. This is the view of Vijñānabhikṣu and some modern writers.¹ They hold that the existence of God as possessed of creative activity cannot be admitted. Yet we must believe in God as the eternally perfect spirit who is the witness of the world and whose mere presence (sannidhimātra) moves prakṛti to act and create, in the same way in which the magnet moves a piece of iron. Vijñānabhikṣu thinks that the existence of such a God is supported by reason as well as by the scriptures.

Theistic interpretation of the Sāṅkhya.

VI. CONCLUSION

The Sāṅkhya may be called a philosophy of dualistic realism. It traces the whole course of the world to the interplay of two ultimate principles, viz. spirit

¹ *Vide Prasacana-bhāṣya, ibid.*; A. K. Majumdar, *The Sāṅkhya Conception of Personality, ibid.*

and matter (*puruṣa* and *prakṛti*). On the one hand, we have *prakṛti* which is regarded as the ultimate cause of the world of objects including physical things, organic bodies and psychical products like the mind (*manas*), the intellect and the ego. *Prakṛti* is both the material and the efficient cause of the world. It is active and ever-changing, but blind and unintelligent. How can such a blind principle evolve an orderly world and direct it towards any rational end? How again are we to explain the first disturbance or vibration in *prakṛti* which is said to be originally in a state of equilibrium? So, on the other hand, the Sāṅkhya admits another ultimate principle, *viz.* *puruṣa* or the self. The category of *puruṣa* includes a plurality of selves who are eternal and immutable principles of pure consciousness. These selves are intelligent but inactive and unchanging. It is in contact with such conscious and intelligent selves that the unconscious and unintelligent *prakṛti* evolves the world of experience. But how can the inactive and unchanging self at all come in contact with and influence *prakṛti* or matter? The Sāṅkhya holds that the mere presence (*sannidhi*) of *puruṣa* or the self is sufficient to move *prakṛti* to act, although it itself remains unmoved. Similarly, it is the reflection of the conscious self on the unconscious intellect that explains the cognitive and other psychical functions performed by the latter. But how the mere presence of the self can be the cause of changes in *prakṛti*, but not in the self itself, is not clearly explained. Nor again is it quite clear how an unintelligent material principle like the intellect can reflect pure consciousness (which is im-

material) and thereby become conscious and intelligent. The physical analogies given in the Sāṅkhya are not sufficiently illuminating. Further, the existence of many selves is proved by the Sāṅkhya from the differences in the nature, activity, birth and death, and sensory and motor endowments of different living beings. But all these differences pertain, not to the self as pure consciousness, but to the bodies associated with it. So far as their intrinsic nature (i.e. pure consciousness) is concerned, there is nothing to distinguish between one self and another. So there seems to be no good ground for the Sāṅkhya theory of many ultimate selves. It may be that the many selves of which we speak, are the empirical individuals or egos dealt with in ordinary life and experience. From the speculative standpoint there seem to be certain gaps in the Sāṅkhya philosophy. Still we should not underrate its value as a system of self-culture for the attainment of liberation. So far as the practical end of attaining freedom from suffering is concerned, this system is as good as any other and enables the religious aspirant to realize the highest good of his life, *viz.* liberation.

CHAPTER VIII

THE YOGA PHILOSOPHY

I. INTRODUCTION

The Yoga philosophy is an invaluable gift of the great Indian sage Patañjali to all bent upon spiritual realization. It is a great aid to those who wish to realize the existence of the spirit as an independent principle, free from all limitations of the body, the senses and the mind.¹ It is known also as the Pātañjala system after the name of its founder. The *Yoga-sūtra* or the *Pātañjala-sūtra* is the first work of this school of philosophy. Some important works of this system. Vyāsa wrote a brief but valuable commentary on the *Yoga-sūtra* called *Yoga-bhāṣya* or *Vyāsa-bhāṣya*. Vācaspati's *Tattva-vaiśārādī* is a reliable glossary on Vyāsa's commentary. Bhojarāja's *Vṛtti* and *Yogamañi-prabhā* are very simple and popular works on the Yoga system. Vijñānabhikṣu's *Yoga-vārttika* and *Yoga-sāra-saṅgraha* are other useful manuals of the Yoga philosophy.

¹ Miss G. Coster has the Yoga system in view when she says : " We need a new kind of Society for Psychical Research . . . to demonstrate to the ordinary public the possibility (or impossibility) of genuine super-physical experience on this side " (*vide Yoga and Western Psychology*, p. 246).

The Pātañjala system is divided into four pādas or parts. The first is called the samādhipāda and treats of the nature, aim and forms of yoga, the modifications of citta or the internal organ, and the different methods of attaining yoga. The second, viz. the sādhanapāda, deals with kriyāyoga as a means of attaining samādhi, the kleśas¹ or mental states causing afflictions, the fruits of actions (karma-phala) and their painful nature, and the fourfold form of suffering, its cause, cessation and the means thereof. The third or vibhūtipāda gives an account of the inward aspects of yoga and the supernormal powers acquired by the practice of yoga and so forth. The fourth part is called the kaivalyapāda and describes the nature and forms of liberation, the reality of the transcendent self and the other world and so on.

The Yoga is closely allied to the Sāṅkhya system.

It is the application of the theory of the Sāṅkhya in practical life.

The Yoga accepts the Sāṅkhya epistemology and admits the three pramāṇas of perception, inference and scriptural testimony. It accepts also the metaphysics of the Sāṅkhya with its twenty-five principles, but adds one more, viz. God. The special interest of this system is in the practice of yoga

¹ The verb, 'kliś' is ordinarily intransitive (kliśyati), meaning 'to be afflicted.' 'Kleśa,' then means affliction or suffering. But 'kliś' is sometimes also transitive (kliśoati), meaning 'cause affliction,' 'torment.' The present word is more conveniently derived from this transitive sense. *Vide Vyāsa-bhāṣya* 1.5, where kliṣṭa-kleśa-hetuka.

as the sure means of attaining *vivekajñāna* or discriminative knowledge which is held in the Sāṅkhya as the essential condition of liberation.

The value of yoga as an important method of realizing the spiritual truths of Indian philosophy has been recognized by almost all the Indian systems. We have clear evidence of

The value of yoga for life and philosophy.

the recognition of yoga practices even in the Vedas, the Upaniṣads, the Smṛtis and the Purāṇas¹. So long as the mind or the intellect of a man is impure and unsettled, he cannot properly understand anything of philosophy and religion. We must have a pure heart and a tranquil mind if we are to know and realize the truths of philosophy and religion. Now the practice of yoga is the best way of self-purification, i.e. purification of the body and the intellect. Hence it is that all systems of Indian philosophy, with the exception of the Cārvāka, insist on the practice of yoga as the necessary practical side of a philosophy of life.

The Pātañjala system makes a special study of the nature and forms of yoga, the different steps in yoga practice, and other important things connected with these. It holds, like the Sāṅkhya and some other Indian systems, that liberation is to be attained through the direct knowledge of the self's distinction from the physical world including our body, mind and the ego (*vivekajñāna*). But this can be realized only if we can manage to suppress and

The Yoga lays down a practical path for attaining liberation.

¹ Cf. *Kaṭha Upaniṣad*, 6.11, 6.18. *Śvetāśvatara*, 2.8, 2.11.

terminate the functions of the body and the senses, the manas and the intellect, and finally, the ego (i.e. the empirical self) and yet have self-consciousness or experience of the transcendent spirit (puruṣa). This would convince us that the self is above the mind-body complex, the senses and the intellect and also the suffering or enjoying individual ego. It will be seen to be above all physical reality with its spatio-temporal and cause-effect order. This is the realization of the self as the free, immortal spirit which is above sin and suffering, death and destruction. In other words, it is the attainment of freedom from all pain and misery, i.e. liberation. The Yoga system lays down a practical path of self-realization for the religious aspirant and the sincere seeker after the spirit. The Sāṅkhya lays greater stress on discriminative knowledge as the means of attaining liberation, although it recommends such practical methods as study, reasoning and constant meditation on the truth.¹ The Yoga, on the other hand, emphasizes the importance of the practical methods of purification and concentration for realizing the self's distinction from the body and the mind, and thereby attaining liberation. These will be explained in the Yoga ethics. Before we come to that we have to study the Yoga psychology which deals with the nature of the self, the mind and its function, and the relation between mind, body and the self.

II. YOGA PSYCHOLOGY

In the Sāṅkhya-Yoga system, the individual self (jīva) is regarded as the free spirit associated with the

¹ Vide *Rārīkā* and *Kaumudī*, 51.

gross body and more closely related to a subtle body con-

The self knows the objects of the world through the modifications of citta or the mind.

stituted by the senses, the manas, the ego and the intellect. The self is, in its own nature, pure consciousness, free from the limitations of the body and the fluctuations of the mind. But in its ignorance it confuses itself with citta. The citta is the first product of prakṛti, in which the element of sattva or the power of manifestation naturally predominates over those of rajas and tamas. It is essentially unconscious; but being in the closest proximity to the self it reflects, through its manifesting power, the self's consciousness so as to become apparently conscious and intelligent. When the citta is related to any object, it assumes the form of that object. The self knows the objects of the world through the modifications of citta which correspond to the forms of the objects known. Although the self really undergoes no change or modification, yet because of its reflection in the changing states and processes of citta, the self appears to be subject to changes and to pass through different states of the mind or citta, in the same way in which the moon appears to be moving when we see it reflected in the moving waves.¹

The modifications of citta, i.e. mental states, are

many and varied. These may be classified under five heads, namely, pramāṇa or true cognition, viparyaya or false cognition, vikalpa or imagination,

¹ Vide *Yoga-sūtr.* and *Vṛtti*, 1.4. Cf. Sāṅkhya theory of "Evolution of the World," ante.

nidrā or sleep, and smṛti or memory. There are three kinds of true cognition, viz. perception, inference and verbal testimony. These have been explained in almost the same way as in the Sāṅkhya. Viparyaya is the wrong knowledge of objects and includes doubt or uncertain cognitions. Vikalpa is mere verbal knowledge due to the perception of words, to which no real facts correspond. When you hear the words "horse's egg," you understand the meaning of the words indeed, yet nothing real corresponds to the phrase. Sleep (nidrā) is another kind of mental modification. It is due to the preponderance of tamas in citta and the consequent cessation of waking consciousness and dream experiences. It thus stands for deep dreamless sleep (suṣupti). Some philosophers think that in sound sleep there is no mental function or conscious state at all. But this is wrong. On waking from sound sleep we say, "I slept well," "I knew nothing," etc. Such memory of what took place during sleep supposes direct experience of the state of sleep. So there must be in sleep some mental state or process which is concerned in the experience of the absence of knowledge (abhāvapratyayālambanā vṛtti). Smṛti or memory is the reproduction of past experiences without any alteration or innovation. All mental states and processes (citta-vṛtti) may be included in these five kinds of modifications. We need not admit any other kinds of mental functions.¹

¹ Vide Yoga-sūtr., Bhāṣya and Vṛtti, 1.5-11.

When citta is modified into any kind of vṛtti or mental state, the self is reflected in it and is apt to appropriate it as a state of itself. Hence it is that it appears to pass through different states of the mind and stages of life. It considers itself to be subject to birth and growth, decay and death at different periods of time. It is led to believe that it sleeps and wakes up, imagines and remembers, makes mistakes and corrects errors, and so on. In truth, however, the self (puruṣa) is above all the happenings of the body and the mind, all physical and psychical changes, like sleeping and waking, birth and death, etc. It is the mind that really performs these functions of sleeping and waking, knowing and doubting, imagining and remembering. The self appears to be concerned in these functions because it is reflected in the citta or mind which is held up before it as a mirror before a person. It also appears to be subject to the five kleśas or sources of afflictions, namely, (i) avidyā or wrong knowledge of the non-eternal as eternal, of the not-self as the self, of the unpleasant as the pleasant, and of the impure as pure, (ii) asmitā, i.e. the false notion or perception of the self as identical with buddhi or the mind, (iii) rāga or desire for pleasure and the means of its attainment, (iv) dveṣa or aversion to pain and the causes thereof, (v) abhiniveśa or the instinctive fear of death in all creatures.¹

¹ *Op. cit.*, 2.3-9.

So long as there are changes and modifications in citta, the self is reflected therein and, in the absence of discriminative knowledge, identifies itself with them. As a consequence, the self feels pleasure or pain out of the objects of the world, and loves or hates them accordingly. This means bondage for the self. If, therefore, we are to attain liberation, we must somehow restrain the activities of the body, the senses and the mind, and finally suppress all the modifications of citta. When the waves of the empirical consciousness (kārya-citta) die down and leave the citta in a state of perfect placidity (kāraṇa-citta), the self realizes itself as distinct from the mind-body complex and as free, immortal and self-shining intelligence. It is the aim of yoga to bring about this result through the cessation of the functions of citta.

III. YOGA ETHICS

1. *The Nature and Forms of Yoga*¹

Yoga here means the cessation of mental functions or modifications (cittavṛttinirodha). It does not mean any kind of contact between the individual self and some other reality like God or the Absolute. The aim of yoga, as we have already said, is to prevent the self from identifying itself with mental modifications. But this is not possible so long as the modi-

The self's bondage is due to its identification with mental modifications. So liberation requires their cessation.

Yoga is just the cessation of mental modifications.

¹ *Yoga-sūtr.* and *Bhāṣya*, 1. 1-4, 1. 12-18, 1. 23, 2. 1-2, 4.29-34.

fications are there and the self has not realized its distinction from citta or the mind. So what yoga really stands for is the arrest and negation of all mental modifications.

There are five levels of the mental life (cittabhūmi).

There are five levels of mental modifications. The first three are not conducive to yoga.

These are called kṣipta or restless, mūḍha or torpid, vikṣipta or distracted, ekāgra or concentrated, and niruddha or restrained. In each of these there is some kind of repression of mental modifications. One state of the mind excludes other different states. Love and hate naturally oppose and cancel each other. But still yoga cannot be attained in all the levels of citta. In the first, called kṣipta, the mind is under the sway of rajas and is tossed about by objects. It flits from one thing to another without resting in any. This condition is not at all conducive to yoga, because it does not help us to control the mind and the senses. The second, viz. mūḍha, is due to an excess of tamas in the mind and produces the states of sleep and the like. Yoga should not be confused with the state of sleep, in which there is a temporary suspension of some functions of the mind. Sleep is induced when the mind is overpowered by tamas, while yoga requires the purification of the mind through intensification of sattva. In the third level, called vikṣipta or distracted, the mind attends to this or that object for a short time, but is disturbed by the thoughts of other objects and withdrawn from the first. This is a stage of imperfect or partial steadiness of the mind. It cannot be called yoga, because it does not fully stop mental changes,

nor end our troubles and destroy the mental afflictions of avidyā and the rest.

The fourth level, called ekāgra, is a state of undisturbed attention to some object for

The last two levels are conducive to yoga :
Samprajñāta and
asamprajñāta samādhi.

a long time. It is the prolonged concentration of the mind on the object of meditation. In this state, the mind continues to think or meditate on some object, and so, even here, the mental processes are not altogether arrested. At the last level, called niruddha, there is the cessation of all mental functions including even that of concentration which marks the previous stage. Here the succession of mental states and processes is completely checked, and the mind is left in its original, unmodified state of calmness and tranquillity. These last two levels are conducive to yoga in so far as both manifest the sattva element of the mind to the highest degree and are helpful for the attainment of the ultimate goal, viz. liberation. In fact, ekāgra or the state of concentration is called samprajñāta yoga or the trance of meditation, in which there is a clear and distinct consciousness of the object of contemplation. It is known also as samāpatti or samprajñāta samādhi, inasmuch as the mind is, in this state, entirely put into the object and assumes the form of the object itself. So also, the state of niruddha is called asamprajñāta yoga or asamprajñāta samādhi, because all mental modifications being stopped in this state, nothing is known or thought of by the mind. This is the trance of absorption in which all psychoses and appearances of objects are stopped and there are no

ripples in the placid surface of the mind. Both these kinds of yoga are known by the common name of samādhi-yoga or the trance of concentration.

There are, then, two main kinds of yoga or samādhi, viz. the samprajñāta and

There are four kinds of samprajñāta samādhi.

the asamprajñāta. Four kinds of samprajñāta samādhi are distinguished according to the different objects of contemplation. It is called savitarka when the mind is concentrated on any gross physical object of the external world, e.g. the image of a god or goddess. Having realized the nature of this object, one should concentrate on subtle objects like the tanmātras or subtle essences of the physical elements. The mind's concentration on these subtle objects is called savicāra samādhi. The next step is to take some subtler objects like the senses and concentrate the mind on them, till their real nature becomes manifest to it, in what is called sāvānanda samādhi. The last kind of samprajñāta samādhi is called sāsmitā inasmuch as the object attended to herein is asmitā or the ego-substance with which the self is ordinarily identified. The fruition of this stage of concentration is the realization of the true nature of the ego as a material product of the mind-body complex and so quite distinct from the immaterial self.

Thus the mind realizes the nature of different objects within or without the body and leaves them behind, one after the other, till it becomes completely free from the thoughts of all objects and attains what is called asamprajñāta samādhi or yoga par

Asamprajñāta samādhi is yoga par excellence.

excellence. This is the final stage of samādhi, because when it is attained the whole world of objects ceases to affect and to exist for the yogin.¹ In this state the self abides in its own essence as pure consciousness, enjoying the still vision of isolated self-shining existence. When one attains this state, one reaches the final goal of life, namely, liberation or freedom from all pain and suffering. All life is a quest of peace and a search for the means thereof. Yoga is one of the spiritual paths that leads to the desired goal of a total extinction of all pain and misery through the realization of the self's distinction from the body, the mind and the individual ego. But this final goal cannot be attained all at once. Even if it be possible for a self to attain once the state of samādhi and thereby release from pain, there is the possibility of a relapse and consequent recurrence of pain, so long as all the impressions and tendencies of the mind due to its past and present deeds are not wiped out. It requires a long and arduous endeavour to maintain oneself steadily in the state of samādhi and destroy the effects of the different kinds of karma, past and present. For this it is necessary to practise yoga with care and devotion for a sufficiently long time.

There are three main paths of yoga, namely, jñāna, bhakti and karma. A man should adopt and follow one of these according to his talent, temperament and character. Those who have got a predominantly intellectual

There are three paths of yoga, viz. jñāna, bhakti and karma, all of which lead to the same goal, i.e. liberation.

¹ The final stage of samādhi is sometimes called dharmamegha, because it showers on the yogin the blessing of kaivalya or liberation.

temperament - may follow the path of knowledge (jñāna-yoga) and, by a searching analysis of the objects of the world and the so-called goods of life, dissociate themselves completely from all things of the world including the body and the mind. A man of an emotional temperament should devote himself, heart and soul, to God and serve and worship Him faithfully for a long time. This is bhakti-yoga which also takes the religious man to the final goal of life, viz. liberation. The yoga of action (karma-yoga or kriyā-yoga) is recommended for those who are prone to activity and incapable of prolonged meditation or devotion. It consists in the practice of austerities (tapas), study of the scriptures (svādhyāya), and contemplation of God (Īśvarapraṇidhāna). The path of karma also leads one to the desired goal of liberation, if it be followed in the right spirit.

2. *The Eightfold Means of Yoga* ¹

As we have already said, a man cannot realize spiritual truths so long as his mind is tainted with impurities and his intellect vitiated by evil thoughts.

There are eight means of yoga called *yogāṅgas* :

It is in the pure heart and the clear understanding that the truth of the spirit is revealed and directly experienced. The Sāṅkhya-Yoga system holds that liberation is to be attained by means of spiritual insight (prajñā) into the reality of the self as the pure immortal spirit which is quite distinct from the body and the mind. But spiritual insight can be had only when the mind is purged of all impurities and rendered perfectly

¹ Cf. *Yoga-sūtr.* and *Bhāṣya*, 2.26-55, 3.1-4.

calm and serene. For the *purification and enlightenment of citta* or the mind, the Yoga gives us the eightfold means which consists of the disciplines of (1) yama or restraint, (2) niyama or culture, (3) āsana or posture, (4) prāṇāyāma or breath-control, (5) pratyāhāra or withdrawal of the senses, (6) dhāraṇā or attention, (7) dhyāna or meditation, and (8) samādhi or concentration. These are known as aids to yoga (yogāṅga).

The first discipline of yama or restraint consists in (a) abimsā or abstention from all kinds of injury to any life, (b) satya or truthfulness in thought and speech, (c) asteya or non-stealing, (d) brahmacarya or control of the carnal desires and passions, and (e) aparigraha or non-acceptance of unnecessary gifts from other people. Although these practices seem to be too well-known to require any elaboration, yet the Yoga explains all their details and insists that a yogin must scrupulously follow them. The reason for this is obvious. It is a psychological law that a sound mind resides in a sound body, and that neither can be sound in the case of a man who does not control his passions and sexual impulses. So also, a man cannot concentrate his attention on any object when his mind is distracted and dissipated by sin and crime and other evil propensities. This explains the necessity of complete abstention from all the evil courses and tendencies of life on the part of the yogin who is eager to realize the self in samādhi or concentration.

(1) Yama consists in abstention from injury to life, from falsehood, theft, incontinence and avarice.

The second discipline is *niyama* or culture. It consists in the cultivation of the following good habits: (a) *śauca* or purification of the body by washing and taking pure food (which is *bāhya* or external purification), and purification of the mind by cultivating good emotions and sentiments, such as friendliness, kindness, cheerfulness for the virtues and indifference to the vices of others (which is called *ābhyantara* or internal purification), (b) *santoṣa* or the habit of being content with what comes of itself without undue exertion, (c) *tapas* or penance which consists in the habit of enduring cold and heat, etc. and observing austere vows, (d) *svādhyāya* or the regular habit of study of religious books, and (e) *Īśvarapraṇidhāna* or meditation of and resignation to God.

Āsana is a discipline of the body and consists in the adoption of steady and comfortable postures. There are various kinds of *āsana*, such as *padmāsana*, *vīrāsana*, *bhadrāsana*, etc. These can be properly learnt only under the guidance of experts. The discipline of the body is as much necessary for the attainment of concentration as that of the mind. If the body is not completely free from diseases and other disturbing influences, it is very difficult to attain concentration. Hence the Yoga lays down elaborate rules for maintaining the health of the body and making it a fit vehicle for concentrated thought. It prescribes many rules for preserving the vital energy, and strengthening and purifying the body and the mind. The *āsanas* or postures recommended in it are effective ways by which

(2) *Niyama* consists in the cultivation of good habits.

(3) *Āsana* is the adoption of steady and comfortable postures.

the body can be kept partially free from diseases, and all the limbs, especially the nervous system, can be brought under control and prevented from producing disturbances in the mind.

Prāṇāyāma is the regulation of breath. It consists in deep inspiration (pūraka), retention of breath (kumbhaka), and expiration (recaka) with measured durations. The details of the process should be learnt from experts. That respiratory exercises are useful for strengthening the heart and improving its function is recognized by medical men when they recommend walking, climbing, etc., in a graduated scale, for patients with weak hearts. The Yoga goes further and prescribes breath-control for concentration of the mind, because it conduces to steadiness of the body and the mind. So long as the function of breathing continues, the mind also goes on fluctuating and noticing the current of air in and out. If, and when, it is suspended, the mind is in a state of undisturbed concentration. Hence by practising the control of breath, the yogin can suspend breathing for a long time and thereby prolong the state of concentration.

Pratyāhāra consists in withdrawing the senses from their respective external objects and keeping them under the control of the mind. When the senses are effectively controlled by the mind, they follow, not their natural objects, but the mind itself. So in this state the mind is not disturbed by sights and sounds coming through the eye

(4) Prāṇāyāma is regulated inhalation, retention and exhalation of breath.

(5) Pratyāhāra consists in withdrawing the senses from their objects.

and the ear, but makes these senses follow itself and see and hear its own object. This state is very difficult, although not impossible, of attainment. It requires a resolute will and long practice to gain mastery over one's senses. The above five disciplines of restraint and culture (*yama* and *niyama*), bodily posture (*āsana*), breath-control (*prāṇāyāma*), and control over the senses (*pratyāhāra*) are regarded as the external aids to yoga (*bahirāṅga-sādhana*). As compared with these, the last three disciplines are said to be internal to yoga (*antarāṅga-sādhana*), because they are directly related to some kind of *samādhi* or yoga. These are *dhāraṇā*, *dhyāna* and *samādhi*.

Dhāraṇā or attention is a mental discipline which consists in holding (*dhāraṇa*) or fixing the mind (*citta*) on the desired object. The object thus attended to may be intra-organic, like one's navel, the mid-point of the eyebrows, etc., or extra-organic, like the moon, the images of gods, etc. The ability to keep one's attention steadily fixed on some object is the test of fitness for entering on the next higher stage of yoga.

Dhyāna or meditation is the next step. It means the even flow of thought about, or rather, round about, the object of attention. It is the steadfast contemplation of the object without any break or disturbance. This has the effect of giving us a clear and distinct representation of the object first by parts and aspects. But by long-continued meditation the mind can develop the partial

(6) *Dhāraṇā* consists in fixing the mind on the desired object.

(7) *Dhyāna* is the steady contemplation of the object without any break.

representation of the object into a full and live presentation of it. Thus dhyāna reveals the reality of the contemplated object to the yogin's mind.

Samādhi or concentration is the final step in the practice of yoga. In it the mind is so deeply absorbed in the object of contemplation that it loses itself in the object and has no awareness of itself. In the state of dhyāna, the act and the object of thought remain distinct and separate states of consciousness. But in samādhi the act of meditation is not separately cognised; it takes on the form of the object and loses itself, as it were. So here only the object of thought remains shining in the mind, and we do not even know that there is a process of thought in the mind. It should be observed here that *this samādhi as a discipline is different from the samādhi or the yoga previously defined as "the restraint of the mind" (cittavṛtti-nirodha)*. The former is but the means for the attainment of the latter which is its end. These last three steps in the practice of yoga are called internal means (antaraṅga-sādhana). They should have the same object, i.e. the same object should be first attended to, then meditated and lastly concentrated upon. When thus combined they are said to constitute samyama which is very necessary for the attainment of samādhi-yoga.

A yogin is believed to acquire certain extraordinary powers by the practice of yoga in its different stages. Thus we are told that the yogins can tame all creatures including even ferocious animals, get any object by the

(8) Samādhi is the mind's absorption in the object of contemplation.

The supernormal powers accruing from yoga.

mere wish of it, know directly the past, present and future, produce supernatural sights, sounds, and smells, and see subtle entities, angels and gods. They can also see through closed doors, pass through stone walls, disappear from sight, appear at different places at the same time, and so forth. While these may be possible, the Yoga system warns all religious aspirants not to practise yoga with these ends in view. Yoga is for the attainment of liberation. The yogin must not get entangled in the quagmire of supernormal powers. He must overcome the lure of yauhic powers and move onward till he comes to the end of the journey, viz. liberation.¹

IV. THE PLACE OF GOD IN THE YOGA ²

God does not seem to occupy an important place in the Yoga system. Patañjali himself has not felt the necessity of God for solving any theoretical problem of philosophy. For him God has a more practical value than a theoretical one. Devotion to God is considered to be of great practical value, inasmuch as it can be utilized as one of the alternative means for the attainment of samādhi or concentration. The subsequent commentators and interpreters of the Yoga evince also a theoretical interest in God and discuss the speculative problems as to the nature of God and the proofs for the existence of God. Thus the Yoga system has both a theoretical and a practical interest in the Divine Being.

God does not seem to have an important place in the Yoga system.

¹ Vide *Yoga-sūtr.* and *Bhāṣya*, 3. 37, 3. 51, 4. 1.

² Vide *Yoga-sūtr.*, *Bhāṣya* and *Vṛtti*, 1. 23-29, 1. 33-34.

According to the Yoga, God is the Supreme Person who is above all individual

God is the Perfect Spirit who is eternal, all-pervading, omnipotent and omniscient.

selves and is free from all defects. He is the Perfect Being who is eternal and all-pervading, omni-

potent and omniscient. All individual selves are more or less subject to the afflictions (kleśa) of ignorance, egoism, desire, aversion and dread of death. They have to do various kinds of works (karma)—good, bad, and indifferent—and reap the consequences thereof (vipāka). They are also infected and influenced by the latent impressions of their past experiences (āśaya). Even if the liberated self is released from all these troubles, it cannot be said that he was always free from them. It is God and God alone who is *eternally* free from all defects. God is the perfect immortal spirit who ever remains untouched by afflictions and actions, and their effects and impressions (kleśa-karma-vipākā-śayai-raparāmrṣṭaḥ). He possesses a perfect nature, the like of which is not to be met with anywhere else. He has also the fullest possible knowledge of all facts and is, therefore, capable of maintaining the whole world by His mere wish or thought. He is the Supreme Ruler of the world, and has infinite knowledge, unlimited power and wisest desires, which distinguish Him from all other selves.

The existence of God is proved by the following

The proofs of God's arguments :
existence :

The Vedas, the Upaniṣads and other important scriptures speak of the existence of God as the Supreme

Self who is also the ultimate reality and the final goal of the world. Therefore, God exists in the way in which the scriptures testify to His existence.

(1) The testimony of the scriptures.

According to the law of continuity, whatever has degrees must have a lower and an upper limit. There are, for instance, different magnitudes, small and great. An atom is the smallest magnitude, while ākāśa or space is the greatest magnitude. Similarly, there are different degrees of knowledge and power. So there must be a person who possesses perfect knowledge and perfect power. Such a supreme person is God, the highest. There cannot be any self who is equal to God in power and knowledge, for in that case, there will be conflict and clash of desires and purposes between them, and a consequent chaos in the world.

(2) The law of continuity as applied to degrees of knowledge and power.

The creation of the world is due to the association of puruṣa with prakṛti, and its dissolution to the dissociation of the one from the other. Puruṣa and prakṛti being two independent principles cannot be said to be naturally related or associated. Nor are they naturally dissociated, for that would make their relation inexplicable. So there must be an intelligent cause which effects their association and dissociation, according to the unseen moral deserts (adṛṣṭa) of individual selves. No individual self can guide and control its adṛṣṭa or destiny, because it has no clear understanding about it. Therefore, there must be a perfect and an omniscient Being who

(3) The association and dissociation of puruṣa and prakṛti.

brings about the association or dissociation between *puruṣa* and *prakṛti*, according as the *adrṣṭa* of the individual selves requires the creation or the destruction of a world. This Being is God, without whose guidance *prakṛti* cannot produce just that order of the world which is suited to the moral education and final emancipation of individual selves.

Devotion to God, says Patañjali, is one of the alternative ways of attaining *saṁādhi*

Devotion to God is the best means for concentration.

or concentration and, through it, liberation. The later commentators of the Yoga go further and hold that it is the best means for the attainment of concentration. The reason is that God is not only an object of meditation (*dhyāna*), like other objects, but is the Supreme Lord who, by His grace, purges away the sins and evils in the life of His devotee and makes the attainment of yoga easier for him. One who is sincerely devoted to God and is resigned unto Him cannot but meditate on Him at all times and see Him in all the walks of life. On such a devoted son the Almighty Father bestows his choicest gifts, *viz.* purity of the heart and enlightenment of the intellect. God removes all the serious impediments and obstacles in the path of His devotee, such as the *kleśas* or afflictions of the mind, and places him under conditions most favourable for the attainment of yoga. But while the grace of God can work wonders in our life, we, on our part, must make ourselves deserving recipients of it through love and charity, truthfulness and purity, constant meditation of and complete resignation to God.

V. CONCLUSION

To an unsympathetic critic the Yoga may appear to be not so much a system of philosophy as a school of mysticism and magic. The Yoga conception of the self as a transcendent subject which is quite distinct from the body, the mind and the ego, is far removed from the common-sense and the ordinary psychological concept of it. As compared with these the spiritual conception of the self in the Yoga is apt to be regarded as unintelligible and mysterious. Similarly, the supernormal powers associated with the different stages in the practice of yoga can hardly be reconciled with the known laws of the physical or the psychical sciences. So these may appear to be reminiscent of some primitive religion of magic. But it is to be observed that the Yoga scheme of self-realization has a solid foundation in the Sāṅkhya metaphysics which proves the reality of the self as a metaphysical and eternal principle of consciousness. If one believes in the transcendent spirit, one cannot but admit that there are deeper levels of consciousness than the empirical one, and wider possibilities and higher potencies than those of the physical and the sensuous. Glimpses of this deeper reality of our individual life have been caught not only by the seers and saints of different countries, but also by some great philosophers like Plato and Aristotle, Spinoza and Leibniz, Kant and Hegel. The Society for Psychical Research and the modern school of Psychoanalysis have of late contributed much towards our knowledge about the dark regions of the psychical

life, hidden from the ordinary view. The Yoga goes further in the same direction when it formulates certain practical methods of purification and self-control for the realization of the true self of man. Both from a theoretical and from a practical standpoint, it occupies a better position than the Sāṅkhya in so far as it admits the existence of God and relies mostly on actual experiences to carry conviction to its followers. What is necessary for an appreciation of this philosophy is a sympathetic understanding of it and a sincere endeavour to realize its truths. We find one such appreciation of it by Miss Coster when she says: "I am certain that there is a region beyond that painted drop-scene which forms for so many the boundary of this life; and that Π is penetrable and susceptible of exploration by those who are sufficiently determined."¹

CHAPTER IX

THE MĪMĀṂSĀ PHILOSOPHY

I. INTRODUCTION

We have noticed in the *General Introduction* that the Pūrva Mīmāṃsā School or the Mīmāṃsā School, as it is more usually called, is the outcome of the ritualistic side of the Vedic culture just as the Vedānta (sometimes called also Uttara Mīmāṃsā) is the development of its speculative side. The object of the Mīmāṃsā School is to help and support ritualism chiefly in two ways, namely, (a) by giving a methodology of interpretation with the help of which the complicated Vedic injunctions regarding rituals may be understood, harmonized and followed without difficulty, and (b) by supplying a philosophical justification of the beliefs on which ritualism depends. We are concerned here with the second or the philosophical aspect of the Mīmāṃsā.

The faith underlying Vedic ritualism consists of different elements such as belief in the existence of a soul which survives death and enjoys the fruits of rituals in heaven, the belief in some power or potency which preserves the effects of the rituals performed, the belief in the infallibility of the Vedas on which rituals stand, the belief that the world is real and

our life and actions performed here are not mere dreams. The Buddhists, Jainas and Cārvākas challenged the authority of the Vedas. The reality of the world and the existence of the soul are denied by some Buddhists. Some Upaniṣads disparage the idea that 'heaven' is the goal of man and rituals are the best possible human activities. The Mīmāṃsā tries to meet all such criticisms and upholds the original faith underlying ritualism.

Jaimini's *Sūtra* laid the foundation of the Pūrva Mīmāṃsā. Sabaraśvāmī wrote the major commentary or *Bhāṣya* on this work. He is followed by a long line of commentators and independent writers. The two most important among them are Kumārila Bhaṭṭa and Prabhākara (nicknamed 'Guru'), who founded the two schools of Mīmāṃsā, known after their names. Thus the Mīmāṃsā philosophy gradually developed. Etymologically, the word Mīmāṃsā means 'solution of some problem by critical examination of grounds.' As its subject-matter was karma or rituals, the Mīmāṃsā is also sometimes called Karma Mīmāṃsā.

The philosophy of the Mīmāṃsā School may be conveniently discussed under three heads, namely, Theory of Knowledge, Metaphysics, and Ethics and Theology.

II. THE MĪMĀṂSĀ THEORY OF KNOWLEDGE

In its attempt to justify the authority of the Vedas, the Mīmāṃsā came to discuss very elaborately the nature of knowledge, the nature and criterion of truth as well as of falsity, the different sources of valid

Mīmāṃsā's contribution to the theory of knowledge

knowledge (pramāṇas) and other cognate problems. The epistemology of the Mīmāṃsā deals with some very interesting problems. Other schools, specially the Vedānta, freely draw upon the Mīmāṃsā in epistemological matters. We shall notice here very briefly some of the peculiar and important things.

1. *The Nature and Sources of Knowledge*

The Mīmāṃsā, like most other schools, admits two kinds of knowledge, immediate and mediate. Valid knowledge is one which yields some new information about something, is not contradicted by any other knowledge and is not generated by defective conditions (such as defective sense-organ in the case of perceptual knowledge, fallacious premises in the cases of inference, etc).¹

The object of immediate knowledge must be something existing (sat). Only when such an object is related to sense (one of the five external senses and the internal sense, manas), there arises in the soul an immediate knowledge about it. When an object is related to sense, at first there arises a bare awareness of the object. We simply know *that* the object is, but have not yet understood *what* it is. This primary, indeterminate, immediate knowledge is called nirvikalpaka-pratyakṣa or ālocana-jñāna. When at the next stage we interpret

Immediate knowledge: its two stages of development—indeterminate and determinate perceptions.

¹ Vide *Sāstra-dīpikā* on Jaimini's *Sūtra*, 1. 1. 5.

the meaning of this object in the light of our past knowledge and come to understand what class it belongs to, what substance, quality, activity and name it possesses, we have a determinate (*savikalpaka*) perception, which is expressed by judgments like 'This is a man,' 'This has a stick,' 'This is white,' 'This is moving,' 'This is Ram.'¹

Perception, thus completed in two stages, gives us a real knowledge of the world composed of the different objects. Though at the first stage the objects are not known explicitly, all that we know about them at the second stage are implicitly known even at first. In understanding the object at the second stage, the mind only interprets, in the light of past experience, what is given at first; it does not ascribe to it any imaginary predicate. For if we did not perceive at first a man, a white one, etc., how could we judge later that it was a man, it was white, etc., and that it was not a cow and not black, etc. Hence it must be admitted that perception, in spite of containing an element of interpretation, is not necessarily imaginary and illusory as some Bauddhas and some Vedāntins hold. Neither is it true that what we are immediately aware of, before the mind interprets, is a purely unique particular (*svalakṣaṇa*) without any distinguishing class character (as those Bauddhas hold), or is pure existence without any differentiating property (as those Vedāntins say). The world of diverse objects with their different character-

The objects known in perception are real and possess diverse characters.

¹ *Ibid.*, and *Sloka-rūpika* on 1. 1. 4.

istics are given to the mind at the very first moment when we become aware of them.¹

2. *Non-perceptual Sources of Knowledge*

In addition to perception, there are five other valid sources of knowledge, admitted by the Mīmāṃsā, namely, inference (anumāna), comparison (upamāna), authority or testimony (śabda), postulation (arthāpatti) and non-perception (anupalabdhi). The last one is admitted only by the school of Kumārila Bhaṭṭa and not by that of Prabhākara. The Mīmāṃsā theory of inference is more or less similar to that of the Nyāya and need not be mentioned here. We shall discuss the other four non-perceptual sources of knowledge.

Prabhākara admit five sources of knowledge, while Bhaṭṭa admit six.

(i) Comparison (upamāna)

It has been previously seen that the Nyāya admits comparison as a unique source of knowledge. But the Mīmāṃsā, though accepting comparison as an independent source, accepts it in quite a different sense. According to it, knowledge arises from comparison when, on perceiving a present object to be like an object perceived in the past, we come to know that the remembered object is like the perceived one. Some examples will make this clear. On seeing a rat one perceives

The Mīmāṃsā conceives upamāna in a way different from the Nyāya.

Knowledge of similarity about an absent object is obtained by comparison.

¹ Vide *Prakaraṇa-pañcikā*, pp. 54-55.

that it is like a mouse perceived in the past, and thence he gets the knowledge that the remembered mouse is like the perceived rat. This knowledge, namely, 'that mouse, perceived in the past, is like this rat,' is obtained from comparison, or from the knowledge of a similarity of the rat to the mouse. Similarly, one who has seen a cow previously at home, goes to a forest and finds a gavaya (nilgai) and perceives its similarity to the cow at home. He may thence obtain by comparison (i.e. by the knowledge of this similarity) the further knowledge that the cow at home is like the gavaya.¹

Such knowledge cannot be classed under perception.

Such knowledge cannot be placed under perception, memory, inference or testimony.

For, the object (the mouse or the cow) known to be similar is not perceived *then*. It does not come under memory, because, though the object was perceived in the past, its *similarity* to the present object was *not then* known; and, therefore, this similarity cannot be said to be simply remembered. It is not also an inference. From a knowledge like 'this gavaya is like the cow at home' we cannot infer 'the cow at home is like this gavaya,' unless we have another premise like 'all things are similar to other things which are similar to them.'² And such a universal premise containing an invariable concomitance between two terms is *not really used* in the above

¹ The Mīmāṃsā view of upamāna is fully discussed in *Śloka-vārtika*, *Sāstra-dīpikā* (1. 1. 5) and *Prakaraṇa-pañcikā* and briefly in *Sabara-bhāṣya* on 1. 1. 5.

² Vide *Sāstra-dīpikā*, 1. 1. 5.

case where one arrives at the knowledge of the absent cow's similarity to the present gavaya, from the perception of the gavaya being similar to the cow. Again, such knowledge does not obviously arise from verbal testimony or authority. Hence it is given an independent place.

Hence it is given a separate place.

The Nyāya holds that on learning from an authority that a gavaya is like a cow, a person goes to a forest, perceives some animal like the cow and thence he has by upamāna or comparison the knowledge that such an animal is a gavaya. Against this Nyāya view it is pointed out by Mimāṃsaka writers that the knowledge that the particular animal perceived is like the cow is derived from perception and the knowledge that such an animal looking like the cow is a gavaya is obtained through recollection of what was previously learnt from some authority. Lastly, the knowledge that *this* particular animal is a gavaya, is a mere inference from the last knowledge. Hence what the Nyāya considers to be derived from a new source, namely comparison, is not really so.¹

It may be noted here that though the account given above is the one generally accepted by later Mimāṃsakas, Śabarasvāmī² seems to understand upamāna as, what is called in Western logic, analogical argument. The existence of another self is proved, he remarks, by an argument like

Śabara seems to treat upamāna as analogical argument in general.

¹ *Vide Prakaraṇa-pañcikā*. For a critical discussion of 'upamāna,' see D. M. Datta, *The Six Ways of Knowing*, Bk. II.

² *Vide his Bhāṣya on Jaim. sūf.*, I. 1. 5.

this. "Just as you feel the existence of your own self, similarly by analogy you can believe that others also feel the existence of their own selves." Such an argument he calls *upamāna*. Śabara's definition of *upamāna* as 'knowledge of an unperceived object as being similar to some known object,' is not incompatible with the suggestion that he takes *upamāna* as analogical argument.

It should also be remembered that 'similarity' (*sādrśya*), which is the object of *upamāna*, is regarded by the *Mīmāṃsā* as an independent category of reality. It is pointed out that similarity cannot be called a quality (*guṇa*), because a quality cannot be possessed by another quality; but 'similarity' is possessed by qualities even. It cannot be treated as a universal (*sāmānya* or *jāti*). Because a universal means something which is exactly identical in many individuals, (e.g. cowness in cows). Similarity does not mean any completely identical character.

(ii) Authority or Testimony (*śabda*)

The *Mīmāṃsā* pays the 'greatest attention to this source of knowledge, because it has to justify the authority of the Vedas.

An intelligible sentence yields knowledge except when it is known to be the statement of an unreliable person (*anāpta-vākya*). This is known as verbal testimony or simply testimony (*śabda*) or authority. There are two kinds of authority—personal (*pauruṣeya*) and impersonal (*apauruṣeya*). The first consists in the written or spoken testimony of some person. The second denotes the authority of the Vedas. Again, authority may either give information as to the existence of objects (*siddhārtha-vākya*) or give directions for the

Two kinds of authority: Personal and impersonal.

Again authority is either a source of information or a source of command.

performance of some action (*vidhāyaka-vākya*). The Mīmāṃsā is interested primarily in the impersonal authority of the Vedas and that again, because the

The Vedas are valued by the Mīmāṃsā as the impersonal source of commandments.

Vedas give directions for performing the sacrificial rites. The Vedas are looked upon as the Book of Commandments; and therein lies their value. The Mīmāṃsā

even holds that as the sole use of the Vedas lies in directing rituals, any part of them which does not contain such direction but gives information about the existence of anything is useless, unless it can be shown to subserve the purpose of persuading persons to follow the injunctions for performing rituals.¹ The attempt is constantly made, therefore, to show all existential sentences (regarding the soul, immortality, etc.) as indirectly connected with some commandment, by way of persuading people to perform some ritual or dissuading them from forbidden activity. This attitude of

The ritualistic pragmatism of the Mīmāṃsā.

the Mīmāṃsā reminds us of modern Pragmatism which holds that every type of knowledge—ordinary, scientific or philosophical—is valuable only in so far as it leads to some practical activity. The Mīmāṃsā philosophy may be called ritualistic pragmatism, for according to it the value of Vedic knowledge is for ritualistic activity.

According to most of the pro-Vedic schools, the authority of the Vedas lies in their being the words

¹ Vide *Jaim. sūtr.* 1. 2. 1. and 1. 2. 7 and *Sabara-bhāṣya* thereon.
46—(1180B)

of God. But the Mīmāṃsā, which does not believe

The Vedas are not the work of any person; they are eternal.

in any Creator or Destroyer of the world, believes that the Vedas, like the world, are eternal.¹ They

are not the work of any person, human or divine.

Hence the authority of the Vedas is said to be impersonal. Elaborate arguments are

Arguments to prove this view.

advanced to support this view; namely, that no author of the Vedas

is known, that the names of sages that occur in the

Vedic hymns are those of the seers or the expositors or

the founders of the different Vedic schools (sampradāyas), and not the authors, and so on. But the

most important argument, possessing philosophical

importance, is that based on the famous theory that

the word-sound heard is only the perceptible sign of

a real word (śabda) which is eternal.² The chief

reason in support of this view is that if the spoken

word were the real word, then ten different pronuncia-

tions of the word 'cow' would make as many different

words. We could not then say that the same word

had been spoken ten times. We must admit, then,

that the real word 'cow' (which is admitted to be the

same though uttered by different persons) is not pro-

duced by its pronunciations but is only revealed by

them. Unless we take different pronunciations of a

word as the vocal representations of one identical basic

word, all of them could not convey the same meaning.

The real word is not, therefore, produced by the

¹ *Ibid*, Adhikaraṇas 6-8, Chap. I.

² *Jaim. sūtr.* 1. 1. 5; *Sāstra-dīpikā*, 1. 1. 5; *Śloka-tārtika*, *Spheṣa-vāda*.

speakers, but only manifested by their speech. Being unproduced, the real word is eternal. Therefore, the relation between the real word and its meaning is also natural and eternal, not conventional.¹

The Vedas consist of such eternal, basic words; the written or the pronounced Vedas are only the revelations of the eternal Vedas. It follows also from this and the other grounds cited above that the Vedas are not composed by any person.

The infallibility of the authority of the Vedas rests on the fact that they are not vitiated by any defects to which the work of imperfect persons is subject.

The Vedas are infallible.

But in addition to the impersonal Vedic authority, the testimony of a reliable person (āpta) also is accepted by the Mīmāṃsā as a valid source of knowledge. There is, however, a

The statement of a reliable person is also a source of valid knowledge.

special value attached to Vedic authority, because the knowledge of the commandments (dharma) which we have from it is not to be obtained from any other source, such as perception and inference. While the knowledge that personal authority may impart to us

But the knowledge of duty is obtainable only from the Vedas.

can be sometimes obtained otherwise by perception, inference, etc., and is itself based on such previous knowledge, the knowledge derived from the Vedas is neither obtainable otherwise nor dependent on any previous knowledge, the Vedas being eternal.

¹ *Jaim. sūtr.* 1. 1. 5. For an elaborate discussion of the theory of eternal words (Sphoṭa), see D. M. Datta, *The Six Ways of Knowing*, Bk. VI.

In reply to those who try to reduce all knowledge derived from testimony to inference on the ground that the validity of such knowledge is ascertained by inference based on the reliability of authority, the Mīmāṃsā makes an important reply. It asserts that the validity of every knowledge is assured by the conditions which generate that knowledge, so that the knowledge imparted by authority, like every other knowledge, carries with itself such assurance of its own truth. We shall see later on the full reasons in support of this view.

(iii) Postulation (arthāpatti)

Postulation ¹ (arthāpatti) is the necessary supposition of an unperceived fact which alone can explain a phenomenon that demands explanation. When a given phenomenon is such that we cannot understand it in any way without supposing some other fact, we have to postulate this other fact by way of explaining the phenomenon. This process of explaining an otherwise inexplicable phenomenon by the affirmation of the explaining fact is called arthāpatti.² Thus when a man, who is growing fat,

¹ It is difficult to find an exact word in English for 'arthāpatti.' Postulation in the Kantian sense has a close similarity to 'arthāpatti.' A demand for explanation underlies the use of this method, and 'postulare' in Latin means 'demand.'

² Vide *Sabara-bhāṣya*, 1. 1. 5, *Sloka-cārtika*, *Sāstra-dīpikā* and *Prakaraṇa-pañcikā* on Arthāpatti. For critical discussion, vide D. M. Datta, *The Six Ways of Knowing*, Bk. V.

is observed to fast during the day, we find an apparent contradiction between his growing fatness and his fasting. We cannot in any way reconcile these two facts, namely, fatness and fasting, unless we admit that the man eats at night. That the man must eat at night explains the complex whole of apparently conflicting facts, namely, fasting attended with increasing fatness.

Knowledge obtained in this way is distinctive

Knowledge so obtained does not come under perception or inference.

because it is not reducible to perception or inference; and it is not, of course, a case of testimony or comparison. Such knowledge cannot be explained as perception, since we do not see the man eat at night. Nor is it a case of inference, because there is no invariable concomitance (vyāpti) between fatness and eating at night, so that we cannot say that wherever there is fatness there is eating at night, as we can say that wherever there is smoke there is fire.

Though we are not ordinarily aware of it, we

The use of this method of knowledge is very frequent in life.

employ this method of arthāpatti very often in daily life. Some examples will make this clear.

When we call on a friend and do not find him at home, though we are sure that he is alive, we say: 'He must be somewhere outside home.' This last supposition is made by us because this alone can explain how a man who is alive cannot be at home. This method is also largely used by us in the interpretation of language. When some words are omitted in a sentence, we suppose

those words without which the meaning implied by the context cannot be explained. On reading or hearing a sentence like 'shut up,' we supply (by *arthāpatti*) the words 'your lips,' because without them the meaning is incomplete. Similarly, when the primary meaning of a word does not suit the context, we suppose a secondary or figurative meaning which alone can explain the sentence. For example, when we are told, 'Industry is the *key* to success,' we suppose that the meaning of 'key' here must be 'means' and not a real key.

Mīmāṃsakas distinguish between two kinds of postulation, that which is employed to explain something which is perceived (*dr̥ṣṭārthāpatti*), such as fatness in a man who is fasting by day, and that which is used to explain the meanings of words heard (*śrūtārthāpatti*), such as those cited above.

It will be found that *arthāpatti* resembles a hypothesis as understood in Western logic. The distinction between postulation and hypothesis. It appears to be like an explanatory hypothesis. But the difference is

that it lacks the tentative or provisional character of a hypothesis. What is known by *arthāpatti* is not simply hypothetically supposed or entertained, but is *believed* in as the *only* possible explanation. As *arthāpatti* arises out of a demand for explanation, it is different

from a syllogistic inference, the object of which is to conclude from given facts and not to explain given facts. *Arthāpatti* is a search for grounds, whereas an inference is a search for consequents.

(iv) Anupalabdhi or non-perception

According to the Bhāṭṭa Mīmāṃsā and the Advaita

Non-perception yields
an immediate know-
ledge of non-existence.

Vedānta, non-perception (anupalab-
dhi) is the source of our immediate
cognition of the non-existence of
an object. The question here is: How do I know the
non-existence, say, of a jar on the table before me?
It cannot be said that I perceive it with my senses,

Such knowledge can
be obtained neither
from perception,

because non-existence is a negative
fact which cannot stimulate any
sense as a positive fact like the
table can. The Bhāṭṭas and the Advaitins hold, there-
fore that the non-existence of the jar on the table is
known from the absence of its cognition, that is, from
its non-perception (anupalabdhi). I judge that the
jar does not exist on the table because it is *not*
perceived. It cannot be said that the non-existence of
the jar is *inferred* from its non-
perception. For, such an inference
is possible if we already possess the knowledge of a
universal relation between non-perception and non-
existence, that is, if we know that when an object is
not perceived it does not exist. Thus it would be
begging the question or assumption of the very
thing which was sought to be proved by inference.
Nor can we explain the knowledge of the jar's non-
existence by comparison or testimony, since it is not
due to any knowledge of similarity or of words and
sentences. Hence to explain the direct knowledge of
the jar's non-existence we have to recognize non-
nor from inference.

perception (anupalabdhi) as a separate and an independent source of knowledge.¹

It should, however, be remarked here that all non-perception does not prove the non-existence of what is not perceived. All non-perception does not prove non-existence.

We do not see a table in the dark, nor do we perceive any such supersensible entities as atoms, ether, virtue, vice. Yet we do not judge them to be non-existent. If a thing should have been perceived under certain circumstances, then only its non-perception under those circumstances is a proof of its non-existence. It is this appropriate non-perception (yogyānupalabdhi) that is the source of our knowledge of non-existence.

3. *The Validity of Knowledge*

Whenever there are sufficient conditions for the generation of a particular kind of knowledge (and, therefore, no grounds for doubt or disbelief are known), there arises at once that kind of knowledge containing an element of belief in the object known. For example, when our normal eyes light on an object conveniently situated in broad daylight, there is visual perception; when we hear some one speak a meaningful sentence, we have knowledge from his testimony. When there are sufficient premises, inference takes place. That we act on such

¹ Vide *Śloka-vārtika*, *Sāstra-dīpikā* and *Vedānta-paribhāṣā* on Anupalabdhi. For further critical discussion, vide *The Six Ways of Knowing*, Bk. III.

knowledge in everyday life as soon as we have it, without any attempt to test its validity by argument, shows that we believe in it as soon as it arises ; and the fact that such knowledge leads to successful activity and not to any contradiction shows further that such knowledge is valid. When, however, the conditions required for the generation of that kind of knowledge are known to be defective or wanting (if, for example, the eyes are jaundiced, light is insufficient, premises are doubtful or words are meaningless, etc.) no such knowledge arises ; neither, therefore, does any belief arise, so long as the grounds for doubt and disbelief do not disappear. From these facts two conclusions are drawn by the Mimāṃsā: (a) The

The conditions of knowledge generate its validity and belief in the validity.

validity of knowledge arises from the very conditions that give rise to that knowledge, and not from any extra conditions (*prāmāṇyam svataḥ utpadyate*). (b) The validity of a knowledge is also believed in or known as soon as the knowledge arises ; belief does not await the verification of the knowledge by some other knowledge like an inference (*prāmāṇyam svataḥ jñāyate ca*). This Mimāṃsā view, in its double aspect, is known as the theory of intrinsic validity (*svataḥ-prāmāṇya-vāda*).¹

Truth is self-evident according to this view. Whenever any knowledge arises, it carries with it Truth is self-evident. an assurance about its own truth. Sometimes another knowledge may point out that this assurance is misleading, or that the conditions of the knowledge are defective. In such a case we infer from

¹ *Sloka-vārtika*, 2.1.1 and *Sarva-darśana*, on Jaimini system.

the existence of defective conditions the falsity of that knowledge. Thus the falsity of a

But falsity is known by inference. knowledge is ascertained by inference,

while truth is self-evident. To put the whole position simply, belief is normal, disbelief is an exception. As perception, inference and any other knowledge arise, we *implicitly accept them*, believe in them without further argument, unless we are compelled by some contrary evidence to doubt their validity or to infer their falsity. On this unsuspecting faith in our knowledge our life runs smoothly.

Against the Nyāya theory that validity is generated by

If truth were to be ascertained by inference, there would be an infinite regress. some extra conditions (such as soundness of organs), over and above the ordinary conditions which generate a knowledge, the Mīmāṃsā points out

that those extra conditions really form a part of the normal conditions of that knowledge ; without them there would be no belief and, therefore, no knowledge at all. Against the Nyāya view that the validity of every knowledge is ascertained by inference, the Mīmāṃsā points out that this would lead us to an infinite regress and activity would be impossible. If any knowledge, say, a perception, before being acted upon were to be verified by an inference, then by the same Nyāya rule that inference also would have to be verified by another inference and so on ; and there would have been no end to this process of verification and life would have been impossible. As soon as we perceive a tiger we run away, as soon as we infer the approach of a car from its horn we guard our steps ; if we are to wait for verifying our knowledge with the never-ending series of inferences, we would have to wait for ever before we could act on any knowledge. It is true that when there is any positive causes for doubt regarding any knowledge, we take the help of a verifying inference ; but that only does the negative work of removing the obstacles that stand in the way of knowledge. After the obstacles are removed, knowledge arises out of its own usual conditions, if present there, and along with it its validity and belief in its validity. If that verifying inference is unable to remove doubt, then that knowledge does not arise at all.

Belief in authority, personal or impersonal, Vedic or non-Vedic, arises in a similar way. On hearing a meaningful

sentence we at once believe in what it says unless there are reasons for doubt or disbelief. Therefore, the authority

The truth of the Vedas, therefore, is self-evident.

of the eternal, impersonal Vedas also stands on its own legs. Its validity is self-evident and not dependent on inference. Arguments are necessary

for the negative work of clearing the mind of doubts. This being done, the Vedas themselves reveal their own meanings and belief invariably accompanies the understanding of these meanings. To secure this belief all that the Mimāṃsā does is to refute the possible grounds on which the infallibility of the Vedas may be doubted, and thus to prepare the mind for the immediate acceptance of what is known from the Vedas.

4. What is Error?

If truth is self-evident and every knowledge claims

Illusory appearance is denied by Prābhākara.

truth, then how does error arise? The problem of error has been discussed threadbare by every Indian School.

The Prābhākara¹ hold that every knowledge is true, that nothing false ever appears in any knowledge. Even in a so-called case of error like the taking of a rope as a serpent, we have a mixture of two different kinds of knowledge, the perception of a long tortuous thing and the memory of a serpent perceived in the past; and each of these is true. Only due to lapse of memory we forget that the serpent is a thing perceived in the past, and the distinction between the perceived and remembered objects is not observed; we behave towards the rope as we should towards a serpent. It is this behaviour which is faulty. The cognitive defect here is a lapse of memory (*smṛti-pramoṣa*) or its effect, non-discrimination (*vivekāgraha*). This is *negative* and is surely not the same thing as error, which means not merely a want of knowledge but a positive mental state. This Prābhākara theory of error is technically known as *akhyāti-vāda* or denial of illusory appearance. The Bhāṭṭas do not accept this theory.² They point out that mere non-discrimination cannot explain error. We can-

¹ *Vulś Prakaraṇa-pāñcikā*, pp. 32-38.

² *Sāstra-dīpikā*, I.1.5.

not deny that sometimes the illusory object *appears* positively before us. No one can

It is admitted by Bhāṭṭas, but explained as due to wrong relation of real objects. deny that if the eye-ball is pressed while looking at the moon, two moons positively appear before us. The serpent illusion is also similar. In the explanation of error, the Bhāṭṭas

point out that when we perceive a snake in a rope and judge "This is a serpent," both the subject and the predicate are real. The existing rope is brought under the serpent-class which also exists in the world. Error consists, however, in relating these two really existing but separate things in the subject-predicate way. *Error always attaches to such wrong relation (saṃsarga), and not to the objects related which are always real.* Even in the moon illusion two real parts of space perceived are attributed to the real moon perceived, and by such wrong relation the one moon appears to be in two places. Such wrong judgment makes one behave in a way which is the reverse of the right one. This Bhāṭṭa theory of error is, therefore, known as viparīta-khyāti-vāda or the view that error is reversal of right behaviour (akūryasya kāryatayā bhānam).

Thus we find that the Prābhākaras exempt all knowledge from error, but the Bhāṭṭas admit that errors may affect some cognitive relations of objects, though the objects themselves are always correctly perceived. But according to both, error chiefly affects our activity rather than knowledge. Moreover, error is rather an exceptional case of the falsification of the normal claim that every knowledge makes for truth. On the acceptance of this claim alone our everyday life becomes possible. Therefore, the falsification of the truth-claim in some cases does not affect the normal acceptance of it.

III. MIMĀṂSĀ METAPHYSICS

1. General Outlook

Depending on the validity of sense-perception the

The Mīmāṃsā believes in the reality of the perceived world, and of other objects. Mīmāṃsā believes in the reality of the world with all its diverse objects. It rejects, therefore, the Buddhist theory of voidness and momentariness, as well as the

Advaita theory of the unreality of the phenomenal world. In addition to objects perceived it comes to believe, through other sources of knowledge, in souls, heaven, hell and deities to whom sacrifice is to be performed, according to the Vedic commandments. The souls are

There are souls, permanent, eternal substances, and which are eternal spiritual substances. 'so also are the material elements by

the combination of which the world is made. The law of karma is thought sufficient to guide the formation of the world. The world is composed of (a) living bodies wherein the souls reap the consequences

The material world of its past deeds (bhogāyatana), arises out of atoms in accordance with the moral law of karma. (b) the sensory and motor organs, i.e. the indriyas, which are instru-

ments for suffering or enjoying those consequences (bhoga-sādhana), and (c) the objects which constitute the fruits to be suffered or enjoyed (bhogya-viṣaya). No necessity is felt for admitting the existence of God. Some Mīmāṃsakas¹ believe like the Vaiśeṣikas in the atomic theory. But the difference is that, according to the Mīmāṃsā, atoms do not require, for their arrangement in the world, an efficient cause like God. The autonomous law of karma independently regulates the atoms to form the kind of world deserved by the souls.

The Mīmāṃsā metaphysics is then pluralistic and

The Mīmāṃsā philosophy is pluralism and realism, but not empiricism. realistic. It is not empiricism, because it believes in the non-empirical Vedic source of knowledge (which is thought even to be more dependable than sense-experi-

¹ Not all (vide *Śloka-vārtika*, Chap. on Inference, verse 188). For arguments in support of atomism, vide *Prabhākara-vijaya*.

ence¹) and also because it believes in many realities like potential energy, the unseen moral principle, heaven, hell, etc., which cannot be known through sense-experience.

2. *The Theory of Potential Energy (śakti and apūrva)*

In connection with the question of causation the

Mīmāṃsā formulates the theory of potential energy (śakti).² A seed possesses in it an imperceptible power (śakti) with the help of which it can produce the sprout ; when this power is obstructed or destroyed (as, for example, by the frying of the seed), it fails to produce that effect. Similarly, there is the power of burning in fire, the power of expressing meaning and inducing activity in a word, the power of illumination in light and so on. The necessity of admitting such unperceived potency in the cause is that it explains why in some cases though the cause (i.e. seed or fire) is there, the effect (i.e. sprout or burning) does not take place. The explanation is that in such cases though the cause-substance is there, its causal potency has been destroyed or overpowered temporarily, as the case may be, by some obstructing conditions obtaining there.

The Nyāya realists reject this theory. They say that even without admitting an imperceptible potency in causes the above difficulty may be solved by holding that a

Nyāya criticism—
answered.

¹ In fact, Kumārila observes (in *Śloka-cāṭika*, verse 72, 1. 1. 2) that the fact that the Vedas contradict ordinary empirical knowledge is a proof of its superior authority.

² Vide *Sāstra-dīpikā*, p. 80, and *Prakaraṇa pañcikā*, p. 141

cause produces the effect in the absence of obstructions and does not produce it in their presence. The Mīmāṃsā meets this objection by saying that as we have to admit, even according to the Nyāya, something else in addition to the cause (namely, absence of obstruction), for the production of the effect, the Nyāya suggestion is no improvement. If you must suppose something, why not admit a positive something in the very substance (say, seed) which is taken by all as the cause (say, of the sprout), rather than an additional negative condition having a causal power.

One important application of this theory of potency made by the Mīmāṃsā is to the solution of the problem, how an action like a sacrifice performed now bears fruit after a long time (say, after this life, in Heaven) when the action has ceased. It is held that the ritual performed here generates in the soul of the performer an unperceived potency (i.e. power for enjoying the fruit of the action) called *apūrva*, which remains in the soul and bears fruit

The theory of *apūrva* or the soul's potency for enjoyment of the fruits of rituals.

when circumstances are favourable.¹

It will be found that the theory of *apūrva* is a limited hypothesis which tries to explain a part of the general problem of conservation of the fruits of all actions, ritualistic and non-ritualistic, which the more universal law of karma seeks to explain.

3. The Mīmāṃsā Conception of Soul

The conception of soul in the Mīmāṃsā is more or less like that of other realistic and pluralistic schools

¹ Vide *Sāstra-dīpikā*, p. 80; *Prakaraṇa-pañcikā*, pp. 184-95; *Sabara-bhāṣya*, 2. 1. 5.

such as the Nyāya-Vaiśeṣika.¹ The soul is an eternal, infinite substance, which is related to a real body in

The soul is an eternal, infinite substance which has the capacity for consciousness.

a real world and it survives death to be able to reap the consequences of its action performed here.

Consciousness is not the essence of the soul, but an adventitious quality which arises when some conditions are present. In dreamless sleep and in the state of liberation the soul has no consciousness, because its conditions, such as relation of sense to object, are absent. There are as many souls as there are individuals. The souls are subject to bondage and can also obtain liberation. In all these respects the grounds on which the Mīmāṃsā views are based resemble those of the other schools mentioned previously and we need not repeat them here.

Regarding the knowledge of the soul, however,

How is the self known?

there is something worth mention.

The Bhāṭṭa School holds that the self is not known whenever any object is known ; it is known occasionally. When we reflect on the

'As the object of self-consciousness'— say the Bhāṭṭas.

self, we know it as the object of self-consciousness (aham-vitti).

But the Prabhākara School objects to this view on the ground that the very conception of self-consciousness is untenable, because the self cannot be both the subject and object of the same

¹ Vide Śloka-vārtika, Ātma-vāda ; Śāstra-dīpikā, Ātma-vāda (p. 119 et seq.) ; Prakaraṇa-pañcikā, Prakaraṇa 8.

act of knowledge, any more than food can be both the cook and the cooked. The functions of the subject and the object are mutually incompatible (*karma-kartr-virodha*) and cannot be attributed to the same thing at the same time. In every act of knowing an object, however, the self is revealed as the *subject* by that

very knowledge. It is thus that we can speak of the self as the knower in judgments like "I

know this pot." If I myself did not appear as the subject in every knowledge, then the distinction between my knowledge and another man's knowledge would have been impossible.¹ The Bhāṭṭas reply to this that if the self were revealed whenever an object were known, we would invariably have then a judgment like "I know this pot." But this is not always the case. This shows that self-consciousness

does not always accompany the consciousness of an object; but it only occasionally takes place and

is, therefore, something different from the consciousness of objects. As for the opposition between subjectivity and objectivity, it is more verbal than real. If there were any real opposition, then the Vedic injunction "Know the self," and everyday judgments like "I know myself" would have been meaningless. Besides, if the self were never the object of any knowledge, how could we remember the existence of the self in the past? Here the past self cannot be said to be the *subject* or knower of the *present* memory-know-

¹ *Prakaraṇa-pañcikā*, p. 148.

ledge ; it can only be the object of the present self that knows it.¹ This shows that the self can become the object of knowledge.

Closely connected with this question is another, namely, 'How is knowledge known?'
 How is knowledge known?

The Prābhākaras hold that in every knowledge of an object, such as expressed by the judgment '*I know this pot,*' three

factors are present, namely, 'I' or the knower (jñātā), the object known (jñeya) and the knowledge itself (jñāna). All these three are

simultaneously revealed (tripuṭījñāna). Whenever knowledge arises, it reveals itself, its object and the subject.

Knowledge is self-revealing (svayam-prakāśa) and is the revealer of its subject and object as well. The Bhāṭṭas hold, on the contrary, that knowledge by its very nature is such that it cannot be the object of

The Bhāṭṭas hold that knowledge is inferred from the familiarity of its object.

itself, just as the finger-tip cannot touch itself. But how then do we at all come to know that we have the knowledge of a certain object ?

The Bhāṭṭas reply that whenever we perceive an object it appears to be either unfamiliar or familiar. If it appears to be familiar (jñāta), then from this character of familiarity or knownness (jñātatā) which the object presents to us, we infer that we had a knowledge of that object. Knowledge is thus known indirectly by inference on the ground of the familiarity observed in the object.

¹ *Sāstra-dīpikā*, pp. 122-23.

IV. MĪMĀṂSĀ RELIGION AND ETHICS

1. *The Place of the Vedas in Religion*

The Mīmāṃsā does not believe in a creator of the world. In its anxiety to secure the supreme place for the eternal Vedas, the Mīmāṃsā could not believe in God whose authority would be superior to, or at least on a par with, that of the Vedas. According to the Mīmāṃsā, the Vedas embody not so much eternal truths as eternal injunctions or laws which enjoin the performance of the sacrificial rites. Religion or Dharma thus becomes identical with the Vedic injunctions (*codanā-lakṣaṇaḥ dharmah*). The Vedas supply the criterion of what is right, and what is wrong. A good life is a life led in obedience to the Vedic commandments.

2. *The Conception of Duty*

The sacrifices performed in the Vedic times were calculated to please, by oblations and hymns, different deities (the Fire-god, the Sun-god, the Rain-god and others) either to win some favour or avert some ill. Though the Mīmāṃsā is a continuation of this Vedic cult, the ceremonial details of the rituals absorb its interest, rather than the gods themselves who gradually recede and fade into mere grammatical datives. A deity comes to be described not by its moral or intellectual qualities, but as 'that which is signified, in a sacrificial injunction, by the

Religion is based on the Vedic commandments.

A ritual must be performed because it is enjoined by the Vedas, and not with any other motive.

fourth case-ending ' (the sign of a dative, to which something is given). In short, a deity is necessary merely as that in whose name an oblation is to be offered at a sacrifice. But the primary object of performing a sacrifice, says an eminent Mīmāṃsāka, is not worship: it is not to please any deity. Nor is it purification of the soul or moral improvement.¹ A ritual is to be performed just because the *Vedas* command us to perform them. Some of these rituals, it is true, are to be performed in order to enjoy Heaven hereafter or to obtain worldly benefits, such as rainfall. But there are some (e.g. nitya and naimittika karmas) which must be performed just because they are enjoined by the *Vedas*. Here the Mīmāṃsā

Duty for duty's sake.

ethics reaches, through ritualism, the highest point of its glory, namely, the conception of duty for duty's sake. Like

Kant and Mīmāṃsā: agreement and difference.

Kant, the Mīmāṃsā believes that an obligatory action is to be performed not because it will benefit the performer but because we ought to perform it. Like him again the Mīmāṃsā believes that though an obligatory duty is not to be done with any interested motive, yet the universe is so constituted that a person who performs his duty does not ultimately go unrewarded. The difference is that while for this purpose the Mīmāṃsā postulates in the universe the impersonal moral law of karma, Kant postulates God. Again whereas the source of obligation for Kant is the higher self (which commands to the lower, 'tho

¹ Vide *Prakaraṇa-pañcikā*, pp. 185-86.

ought to do what is good'), for the Mīmāṃsakas it is the impersonal Vedic authority which categorically enjoins duty.

3. *The Highest Good*

The highest good in the early Mīmāṃsā conception appears to have been the attainment of Heaven or a state in which there is unalloyed bliss. Heaven is regarded as the end of rituals.¹ The Mīmāṃsaka writers gradually fall in with the other Indian thinkers and accept liberation from bondage to the flesh as the highest good (niḥśreyasa). They realize that the performance of actions, good or bad, if dictated by any desire for enjoyment of objects, causes repeated birth. When one understands that worldly pleasures are all mingled with pain, and becomes disgusted with life in the world, one tries to control one's passions, desists from forbidden actions, as well as actions with motives of future enjoyment. Thus the chance of future birth and bondage is removed. By the disinterested performance of obligatory duties and knowledge of the self, the karmas accumulated in the past are also gradually worn out. After this life such a person, being free from all karma-ties, is never born again. He is thus liberated. As bondage is the fettering of the soul to the world through the body including the senses, the motor-organs and manas, liberation is the total destruction of such bondage through the stoppage of rebirth.²

Heaven is the highest good, according to early Mīmāṃsā.

Liberation replaces Heaven later on.

¹ 'svargakāmo yajeta.'

² Vide *Prakarana-pañcika*, *Prakarana* 8, pp. 154-60.

We have seen already that, according to the Mimāṃsā, consciousness and other mental states are not inherent in the soul. They only arise when the soul is related to objects through the body and the organs. The liberated soul, being dissociated from the body and, therefore, from all the organs including manas, cannot have any consciousness; nor can it, therefore, enjoy bliss. Liberation is then desirable not as a state of bliss, but as the total cessation of painful experience. It is a state where the soul remains in its own intrinsic nature, beyond pleasure and pain.¹ The soul in its intrinsic state (svaetha) can be defined only as substance having existence and a potentiality for consciousness—though no actual consciousness.

4. *Is Mimāṃsā Atheistic?*

Should the Mimāṃsā be called atheistic? Though the reply to this question would seem to be in the affirmative in the light of the

Some scholars think that the Mimāṃsā is not atheistic.

traditional conception of the Mimāṃsā philosophy we have described above, doubts are raised by such a competent authority as Max-Müller.² Bearing in mind that the Mimāṃsā, of all schools, claims to follow the Vedas most faithfully, he finds it difficult to believe

¹ Vide *Sāstra-dīpikā*, pp. 125-31.

² Vide *The Six Systems of Indian Philosophy*, Ch. V. The late Dr Paśupati-nāth Śāstrī also advocated this view in his *Introduction to the Pūrva Mimāṃsā*.

that it could reject the Vedic belief in God. The arguments adduced by the Mīmāṃsakas against the conception of a creator of the universe mean, according to Max Müller, that if God were supposed to be the creator, He would be liable to the charges of cruelty, partiality, etc. But the rejection of a creator-God, he contends, is not necessarily the rejection of God. Even some forms of pantheism like those of the Advaita Vedānta and Spinoza, Max Müller contends, do not accept the reality of creation ; and it is unfair to call them atheistic, just because they do not conform to the customary conception of God.

If the Mīmāṃsā is to be judged by the Vedic ancestry, of which it is so proud,

But this view is difficult to support.

then Max Müller is perhaps right.

But judged by what the Mīmāṃsā itself does and says, his contention cannot be fully accepted. When we find that the early Mīmāṃsakas

The Mīmāṃsā rejects proofs of God's existence.

are silent about God and later ones reject the proofs for the existence

of God, like the Jainas, without replacing them by others, we have no positive proof that the early Vedic faith was still alive in them. The different Vedic deities of course form still necessary parts of the sacrifices performed. Depending on this evidence one might say at best that the Mīmāṃsā believes in polytheism. But even such a view is rendered doubtful by the facts that these deities are not regarded as objects of worship, nor even believed to have any existence anywhere except in the Vedic hymns (mantras) that describe them.¹ While the

¹ Vide Jñā, *Śloka-vārtika*, Eng. Tr., Introduction.

Vedic hymns are inspired by the living presence of the deity in the place of worship, the Mīmāṃsaka wonders how the deity can be simultaneously present in different

It loses the living faith in deities found in the Vedas.

places where he is invoked.¹ So polytheism of the ordinary kind cannot also be attributed to the Mīmāṃsā without some qualification. The deities of the Mīmāṃsaka are like the immortal characters of classical Epics; they do not belong to the space-time world; they are not existing persons, but types. But in a sense the deities are more than these characters, because they are not the products of any imagination; they are eternal and self-manifesting concepts, since they are the characters described by the eternal, self-revealing Vedas. There may be some grandeur and even purity in such a conception of deities, but one would miss here the living faith of the Vedas. It would not be fair, then, to judge the Mīmāṃsā by its Vedic ancestry. Inherited elements of a faith, like inherited limbs, become atrophied by disuse. The Vedic conception of God had no active place in the Mīmāṃsā scheme of life and it is natural that it should gradually fade away. The Mīmāṃsā is one of the many examples in human history of how an overemphasized means becomes its own end, and how gods are sacrificed for temples, prophets and saviours. In its zeal for the Vedas the Mīmāṃsā manages to preserve the Book only to miss its spirit, including a living faith in God.

CHAPTER X

THE VEDĀNTA PHILOSOPHY

I. INTRODUCTION

1. *Origin and Development of the Vedānta*

'Vedānta' literally means 'the end of the Vedas.'

The Vedānta may be regarded as the end of the Vedas in different senses :

Primarily the word stood for the Upaniṣads though afterwards its denotation widened to include all thoughts developed out of the

Upaniṣads. The Upaniṣads may be regarded as the end of the Vedas in different senses. (1) First, the

(1) as the last literary products of the Vedic period,

Upaniṣads were the last literary products of the Vedic period.

Three kinds of literature of this period can be broadly distinguished ; the earliest being the Vedic hymns or mantras compiled in the different Samhitās (viz. Rk, Yajus, Sāma), the next being the Brāhmaṇas which are treatises guiding and encouraging the Vedic rituals and the last, the Upaniṣads which discuss philosophical problems. All these three were treated as revealed texts (śrutis) and sometimes also called the Vedas, in the wider sense of this term.

(2) as studied after the other Vedic literature,

(2) Secondly, in respect of study also, the Upaniṣads came last. As

a rule, a man studied the Samhitās first ; the Brāhmaṇas were required next for guiding him when he entered life and had to perform the

rituals enjoined on a householder ; and last of all the Upaniṣads (some of which are also known as āraṇyakas or forest-treatises) were needed to help him when he retired from the world, led a secluded life in forests and tried to understand the meaning of life and contemplate the mystery of the Universe. (3) Thirdly, the

(3) as the culmi- Upaniṣads may be regarded as the
nation of the Vedic end of the Vedas also in the sense
culture.

that they mark the culmination of the Vedic speculation. In the Upaniṣads themselves we are told that even after the study of the Vedas with other branches of learning a man's education is not complete till he receives instructions in the Upaniṣads.¹

The word ' Upaniṣad ' means either ' that which gets man near to God,' or ' that gets man near to the teacher (upa-ni-sad).'² The last meaning

The literature of the Vedānta. tallies with the fact that the Upaniṣadic doctrines were esoteric, i.e. they were very secretly taught only to the select pupils seated close to (upāsanna)³ the teacher. The Upaniṣads were regarded as the inner or secret meanings (rahasya) of the Vedas, hence their teachings were sometimes called Vedopaniṣad⁴ or the mystery of the Vedas. The Upaniṣads were many⁵

¹ Vide Chāndogya, Chaps. 6 and 7.

² Vide Śaṅkara's Introduction to Kaṭha, Taittiriya, Bhādarānyaka.

³ The verb ' upasad ' (' go near ') is repeatedly used in the Upaniṣads to describe the pupil's approaching the teacher for instruction.

⁴ Vide Taittiriya, I. 11.

⁵ Vide Dasgupta, *History of Indian Philosophy*, p. 28, for a list of 112 Upaniṣads.

in number and developed in the different Vedic schools (śākhās) at different times and places. The problems discussed and solutions offered presented differences inspite of a unity of general outlook. The need was felt, therefore, in course of time for systematizing the different teachings so as to bring out the harmony underlying them. Bādarāyaṇa's *Brahma-sūtra* (also known variously as *Vedānta-sūtra*, *Sūriraku-sūtra* or *Sūriraka-mīmāṃsā*, *Uttara-mīmāṃsā*) undertakes this task. Bādarāyaṇa attempted to set forth the unanimous teachings of the Upaniṣads, and defend them against possible and actual objections. His sūtras, being brief, were liable to different interpretations. Various commentaries thus came to be written to

The schools of the Vedānta.

elaborate the doctrines of the Vedānta in their own light. Each tried to justify its position as the only one consistent with the revealed texts (śruti) and the sūtras. The author of each of these chief commentaries (bhāṣya) became the founder of a particular school of the Vedānta. Thus we have the schools of Śaṅkara, Rāmānuja, Madhva, Vallabha, Nimbārka and many others. Each school of the

The practical followers of the Vedānta.

Vedānta consists not simply of the philosophers who theoretically accept its views but also of a large number of lay followers who try to mould their lives accordingly. It is in this way that the Vedānta in its different forms still persists in the lives of millions. After the chief commentaries, the literature of the Vedānta developed through the innumerable sub-commentaries, glosses and independent treatises written

by the leading intellects of each school to support its views and refute those of the other schools. The total output of Vedānta literature thus became very large, though only a small fraction of it has been printed as yet.

The most common question on which the schools of the Vedānta are divided is :
The chief problem on which the schools of the Vedānta differ. What is the nature of the relation between the self (jīva) and God (Brahman) ? Some, like Madhva, hold that the self and God are two totally different entities ; their view is called dualism (dvaita). Some others, like Saṅkara, hold that the two are absolutely identical ; this view is known as monism (advaita). Some others, like Rāmānuja, again hold that the two are identical only in some special sense ; this view may be called qualified monism (viśiṣṭādvaita). There were many other views, each specifying a particular type of identity (abheda), difference (bheda) or identity-in-difference (bhedābheda) between the self and God, too many to be mentioned here. But the best known among the Vedānta schools are those of Saṅkara and Rāmānuja which will be discussed here.

Three stages in the development of the Vedānta may be distinguished in the light
The three periods of the Vedānta. of what has been said above : (1) The creative stage represented by the revealed texts (śrutis) or the Vedic literature, chiefly consisting of the Upaniṣads. The fundamental ideas of the Vedānta take shape here mostly in the poetic visions and mystic intuitions of the enlightened seers. (2) The stage of systematization represented by

the Brahma-sūtras which gather, arrange and justify the ideas of the previous stage. (3) The stage of elaboration represented by all works beginning from the chief commentaries downwards in which the ideas and arguments are cast into the proper philosophical forms, appeal being made not simply to earlier authority but also to independent reasoning. Though it is possible to consider separately the philosophical speculations of each of these periods, in consideration of space we shall discuss them together. Orthodox Indian writers themselves generally look upon the entire current of thought, spread over the successive stages, as one flow, inseparable at source, but developing and ramifying in its onward course. Let us have a bird's eye view of the development of the Vedānta through the Vedas and Upaniṣads.

2. *How did the Vedānta Develop through the Vedas and the Upaniṣads ?*

Of the three Vedas, Ṛk, Yajus and Sāma, the first is the basic work, the second two contain Ṛk hymns (mantras) in different arrangements to suit their application to sacrifices. The

The Vedic conception of gods and nature.

hymns of the Ṛg-veda mostly consist of praises of the different deities—Agni, Mitra, Varuna, Indra, and so on. They describe the mighty and noble deeds of the various deities, and pray for their help and favour. Sacrifices offered to the gods consisted in pouring oblations of clarified butter and other things into the sacrificial fire along with which the hymns in their praise were recited and sung. These deities were conceived as the

realities underlying and governing the different phenomena of nature, such as fire, sun, wind, rain and others, on which life, agriculture and prosperity depended. Nature, though peopled with different gods, was conceived as subject to some basic law (called *Rta*) by which the whole world, objects of nature as well as living beings, was regulated.

The belief in the moral nature of the universe.

Its function was not only the preservation of order and regularity in planets and other objects, but also the regulation of justice.

Belief in many gods is called polytheism. The

The Vedic faith in gods. Is it polytheism?

Vedas are, therefore, often said to be polytheistic. But there is a peculiarity in Vedic thought that makes this view doubtful. Each god, when praised, is extolled by the hymn as the supreme God, the Creator of the universe and the Lord of all gods. Max

Max Müller's view : Henotheism.

Müller thinks, therefore, that polytheism is not an appropriate name for such a belief, and he coins a new word 'henotheism' to signify this. But whether the Vedic faith is really polytheism or henotheism, depends largely on the explanation of this phenomenon. It is polytheism, if the raising of each god to the supreme position be not the indication of a real belief in the supremacy, but only a wilful exaggeration, a poetic hyperbole. But if the Vedic poets really believed what they said, henotheism would be a better name. The latter view is rendered more than probable by the fact that in the *Rg-veda* we come across passages where it is expli-

citly stated that the different gods are only manifestations of one underlying reality. "The one reality is called by the wise in different ways: Agni, Yama, Mātariśvā" (Ekam sad viprā bahudhā vadanti . . .). Such a clear statement leaves little doubt as to the existence of a real belief in the unity underlying all gods.

According to many writers, there is a development noticeable in Vedic thought and they believe that the idea of God gradually developed from polytheism through henotheism, ultimately to monotheism, i.e. belief in one God. This hypothesis may be true. But let us not forget, in our eagerness to satisfy critics, that even in its most developed form, Indian monotheism retains the belief that though God is one, He has various manifestations in the many gods, any one of which may be worshipped as a form of the Supreme Deity. Even to-day we have in India the divergent cults—Saivism, Vaiṣṇavism and the like—flourishing side by side and almost every one of them is at bottom based on a philosophy of one Supreme God—perhaps even one all-inclusive reality. Indian monotheism in its living forms, from the Vedic age till now, has believed rather in the unity of the gods in God, than the denial of gods for God. Hence Indian monotheism has a peculiarity which distinguishes it from the Christian or the Mahomedan. This is a persistent feature of orthodox Indian faith throughout, not a mere passing phase of the Vedic times.

Is henotheism a transition phenomenon?

The persistent feature of Indian monotheism.

Belief in the unity of all gods which we find in the Rg-veda is only a part of a greater thought which also we find there in a clear form, namely, the unity of all existence. In the famous puruṣa-sūkta which is even now daily recited by every devout Brahmin, the Vedic seer visualizes, perhaps for the first time in human history, the organic unity of the whole universe. Some stanzas are quoted below :

The unity of all existence.

Illustrated in the Hymn of Man.

The Man had a thousand heads, a thousand eyes, a thousand feet : he covered the earth on all sides and stretched ten fingers' length beyond it.

The Man was all that is and all that will be : ruling over immortality, he was all that grows by food.

Such was his greatness ; and the Man was greater still : this whole world is a fourth of him, three-fourths of him are immortal in the sky.

For with three-fourths the Man went on high ; but a fourth of him remained here, and then spread on all sides, over the living and the lifeless world.¹

All existence—earth, heavens, planets, gods, living and non-living objects—is conceived here as the parts of one great person (Puruṣa), who pervades the world, but also remains beyond it. In Him all that is, has been and will be, are united. We have in this hymn the poetic insight

The transcendence and immanence of God.

¹ Rg-veda 10.90 (Peterson's trans.).

not only into the universe as one organic whole, but also into the Supreme Reality which is both immanent and transcendent; God pervades the world, yet He is not exhausted thereby; He remains also beyond it.¹ In terms of Western theology, this conception is panentheism (pan—all, en—in, theos—God), not pantheism; all is not equal to God, but all is *in* God, who is greater than all. One flash of the seer's imagination we have in the above hymn, reveals to us a variety of ideas that inspired the Vedic mind, monism, panentheism and organic conception of the world.

In another hymn (commonly known as the *nāsadīya-sūkta*), we are introduced further to the Vedic conception of the Impersonal Absolute. The reality underlying all existence—the primal one from which everything originates—cannot be described, it says, either as existent or as non-existent (*na sat, na asat*). Here we have perhaps the first flash of a conception of the Indeterminate Absolute, which is the reality underlying all things, but in itself indescribable.

The hymn thus begins:

There was then neither what is, nor what is not,
there was no sky, nor the heaven which is
beyond.

It concludes:

He from whom this creation arose, whether he
made it or did not make it; the highest seer
in the highest heaven, he forsooth knows, or
does even he not know? ²

¹ "Sa bhūmim viśvato vṛtvā atyatiṣṭhad daśādūgūlam,
Pādo'ya viśvā bhūtāni, tripādeṣya amṛtaṁ divi." *Ibid.*
² *Ṛg-veda* 10.129 (Max Müller's trans.).

As for the relation between the conception of ultimate reality as a Person and the conception of it as an Indeterminate Absolute, we may note that the clue to the latter is to be found in the former. For even in the description of Reality as Person, there is a mention of its transcendent aspect, which is, therefore, not describable in terms of the objects of the world and, therefore, indeterminate.

The relation between the personal and the impersonal ideas of God.

Though many of the important elements of the Vedānta are to be found thus in the Rg-veda, they are presented in a poetic way. The method by which the sages arrive at these views is not mentioned, neither the arguments which support them. Philosophy proper must be based on explicit reasoning and argument chiefly. There is, therefore, no regular philosophy, strictly speaking, in the Vedas. The first attempt at philosophical speculation is to be found in the Upaniṣads, where problems about self, God and the world are clearly put and discussed. But even here the philosophical method of arriving at conclusions rigorously supported by arguments is only partly in evidence. Some of the Upaniṣads are written in verses and they contain, like the Rg-veda, inspired utterances on philosophical matters. So also are some other Upaniṣads, though written in prose. The only approach to philosophical method is to be found in

Philosophy based on arguments is absent in the Vedas.

It is found first in the Upaniṣads in a rudimentary form.

the few Upaniṣads, where, through dialogues—questions and answers—attempt is made to lead the sceptical pupil step by step to some conclusion. But inspite of the lack of strict argumentative form, the Upaniṣads have a profound charm and appeal. This is due to the joint effect of the loftiness of ideas, the depth of insight, the mysterious appeal to all that is good and sublime in man and the irresistible force with which the views are asserted as though they are born of a direct vision of truth. A famous German philosopher, Schopenhauer, impressed by the Upaniṣads, declared: "*In the whole world there is no study so beneficial and so elevating as that of the Upaniṣads. It has been the solace of my life, it will be the solace of my death.*"

The problems of the Upaniṣads, to mention only some of the more frequent ones, are: What is the Reality from which all things originate, by which all live and into which all dissolve when destroyed? What is that by knowing which everything can be known? What is that by knowing which the unknown becomes known? What is that by knowing which one can attain immortality? What is Brahman? What is Ātman? As the very nature of these questions implies, the Upaniṣadic mind was already steeped in the belief that there is an all-pervasive reality underlying all things which arise from, exist in and return into it, that there is some reality by knowing which immortality can be attained.

The problems of the Upaniṣads.

The name given to this Reality is sometimes Brahman (God), sometimes Ātman (self), sometimes simply Sat (Being). 'At first there was the Ātman alone,' say the *Aitareya* (1.1.1.) and the *Bṛhadāraṇyaka* (1.4.1.). 'All this is Ātman,' says the *Chāndogya* (7.25.2.). "Ātman being known . . . everything is known," says the *Bṛhadāraṇyaka* again (4.5.6.). Similarly we find. "There was only Being (Sat) at the beginning, it was one without a second" (*Chānd.* 6.2.1.). Again, "All this is Brahman" (*Muṇḍaka*, 2.2.11. and *Chānd.* 8.14.1.). Brahman and Ātman are used synonymously in these different contexts. We are also told explicitly in some places that "This self is the Brahman" (*Bṛhad.* 2.5.19.), "I am Brahman" (*Ibid.*, 1.4.10.).¹

The Upaniṣads shift the centre of interest from the Vedic gods to the Self of man. They analyze the Self, distinguish between its outer husk and its inner reality. The body, the senses, the manas, the intellect and pleasures arising out of them are all sifted and found to be passing, changeful modes, not the permanent essence of the Self. These are merely the sheaths (koṣas), the outer covers, so to say, which conceal an inner, permanent reality, which cannot be identified with

¹ The texts translated here are respectively : 'Om ātmā vā idam eka eva agre āsit.' 'Ātmā eva idam agre āsit.' 'Ātmā eva idam sarvaṃ.' 'Ātmani khalu are dṛṣṭe śrute mate vijñāte idam sarvaṃ viditam.' 'Sad eva saumya idam agre āsit, ekam eva advitīyam.' 'Sarvaṃ khalu idam brahma' (*Chānd.*). 'Brahma eva idam vācam' (*Muṇḍ.*). 'Ayaṃ ātmā brahma.' 'Ahaṃ brahma asmi.'

any of these, though all of these are grounded in it and are its manifestations. This Real Self is pure consciousness, every particular consciousness of objects being its limited manifestation. Not being limited by any object, this pure consciousness is

It is the same as the reality underlying all things.

also infinite. The Real Self is called Ātman. As infinite, conscious reality (satyam, jñānam, anantam) the self of man is identical with the Self of all beings (sarva-*phūtātmā*) and, therefore, with God or Brahman. In the *Kaṭha* we are told: "This Self is concealed in all things, and does not, therefore, appear to be there. But it is perceived by the keen-sighted with the help of a sharp, penetrating intellect" (3.12).

All attempt is made to help man discover this his Real Self. Realization of the Self (*ātma-vidyā* or *ātma-jñāna*) is regarded as the highest of all knowledge (*parā-vidyā*), all other knowledge and learning being inferior to it (*aparā-vidyā*). The method of self-realization lies through the control of the lower self, its deep-rooted interests and impulses, and through study, reasoning and repeated meditation (*śravaṇa*, *manana*, *nididhyāsana*), till the forces of past habits and thoughts are completely overcome by a firm belief in the truths learnt. It is a difficult path which can be followed only if one is strong and wise enough to reject what is pleasant (*preyas*) for what is good (*śreyas*).

The Vedic belief in sacrifices is shaken by the Upaniṣads which declare that with these one cannot achieve the highest goal of immortality. The *Muṇḍaka* says

Rituals are inadequate.

that these sacrifices are like leaky rafts (*i.e.* they are unable to take one across the sea of worldly misery) and those fools that take these as the superior means, suffer again the pangs of old age and death.¹

A ritual can at best secure a temporary place in Heaven, and when the merit (*punya*) earned by it is exhausted there is again birth into this world. A deeper significance is attached to sacrifice, when the worshipping self and the gods worshipped are realized to be the same. The ceremonies of offering oblations to gods thus come to be looked upon as mere external affairs fit for the ignorant who do not understand the mystery

Knowledge of the Self or God is the means of attaining the highest good.

of the universe. Sacrifice to the Self or Brahman is regarded as superior to sacrifice to gods. It is only through the realization of the Self or Brahman that rebirth can be stopped and along with it all misery. One who truly realizes his unity with the Immortal Brahman, realizes immortality.

The Upaniṣads conceive Brahman not only as the pure ground of all reality and consciousness, but also as the ultimate source of all joy. Worldly pleasures

Brahman is the ultimate source of all joy.

are only the distorted fragments of that joy, just as worldly objects are limited manifestations of that Reality.² One who can dive into the deepest recess of his Self, not only realizes his identity with Brahman but gets to the heart of Infinite Joy. The proof that the Self is the source of all joy (says Yājñavalkya to his wife Maitreyī) is that it is the dearest thing to man.

¹ *Muṇḍaka*, 1.2.7.

² *Bṛhadāraṇyaka*, 4.3.32.

One loves another person or thing because he identifies himself with that person or thing, regards him or it as his own Self. Nothing is dear for its own sake, says Yājñavalkya. The wife is not dear because she is wife, the husband is not dear because of being a husband, the son is not dear because of being

All is dear because of the Self.

a son, wealth is not dear for its own sake. All is dear because of

the Self.¹ That the Self in itself is bliss is shown also by pointing out that when a man falls into dreamless sleep, forgets his relation with the body, the senses, mind and external objects and thus retires into his own intrinsic state, he is at peace, he is untouched by pleasure and pain.

Modern biology tells us that self-preservation is a basic instinct in all living beings. But why is self or

Desire to live is due to the joy that lies in life.

life so dear? The answer is given by the Upaniṣads. Life is so dear because life is joy. Who would

like to live if life was not joy?² The joy that we have in daily life, however disturbed and meagre it might be, sustains our desire to live. Greater joy is not obtained by running further away from the Self, after worldly objects. Desires for objects are the fetters that bind us to the world, to the painful vicious circle—birth, death and rebirth. The forces of desires take us away from the Self and condition our existence in the way we hanker after. The more we give up our hankerings for objects and try to realize our identity with the true Self (Ātman) or God

¹ *Ibid.*, 4, 5, 6.

² *Tait.*, 2.7.

(Brahman), the more do we realize true happiness. To feel at one with the Self is to be one with the Infinite God, the Immortal and the Infinite Joy.

Nothing then remains unattained, nothing left to be desired. The Self-realization is the greatest joy.

Kaṭha declares, therefore, that a mortal attains immortality and unity with Brahman even here, in this very life, when his heart is free from all desires.¹

If Brahman or Ātman is the Reality underlying the whole universe, then the question may arise as to the exact relation between Brahman and the world. Creation of the world out of Brahman or Ātman.

The accounts of creation given in the different Upaniṣads do not exactly tally. But all appear to be unanimous in holding that Ātman (or Brahman or Sat) is both the creator and the material cause of the world. And in most of these accounts the starting-point of creation is described somewhat like this: At first there was the soul. It thought, 'I am one, I will be many,' 'I will create the worlds.' Description of the subsequent steps by which things are created varies, some stating that out of Ātman first arises the subtlest element 'Ākāśa,' thence gradually all the grosser ones; others give different accounts.

From these statements creation would appear to be real and God (i.e. The Absolute Soul) a real creator. But in many places we are told that there is no multiplicity here ('neha nānā asti kiñcana'),² that one who sees the many here is doomed to death

¹ *Kaṭha*, 2. 6.14. ² *Kaṭha*, 2.4.11; *Bṛhad.*, 4.4.19.

(*'mrtyoḥ sa mrtyum āpnoti ya iha nāneva paśyati'*).¹ In explanation of the unity of all things, which appear to be many, examples like these are cited: Just as different articles made of gold are all really one, gold is the only real substance in them and the different names and forms (*nāma-rūpa*) which make them appear as many, are merely matters of verbal distinctions, similarly in all objects there is the same Reality, and their differences are merely verbal.² The objects of the world are denied separate, individual existences. Brahman (or Ātman) is also described in many passages not as Creator, but as a Reality which is indescribable, being not only unspeakable, but even unthinkable. Brahman cannot be an object of worship even. Thus the *Kena* declares: "That (Brahman) is other than what is known and beyond the unknown. What is not expressed by speech and by which speech itself is expressed, know that to be Brahman, and not what one worships ■ Brahman."³

These two different kinds of statements about the world and God naturally present a puzzle. Is God really the creator of the world and the world also real therefore? Or, is there really no creation and is the world of objects a mere appearance? Is God a determinate knowable reality which can be described by suitable attributes or is God an indeterminate, unknowable something? What is the real view of the Upaniṣads? Subsequent Vedānta treatises take up

Is creation then
real?

¹ *Ibid.*

² *Chând.*, 5. 1.

³ *Kena*, 1. 3-4.

these problems for solution. The *Brahma-sūtra* of Bādarāyaṇa attempts to systematize and ascertain the real views of the revealed texts. But its brief statements themselves admit of different meanings. Subse-

quent writers who commented on the *Brahma-sūtra* give their own interpretations to the Upaniṣads and the sūtras very clearly and elabo-

The different views leading to different schools of Vedānta.

ately. Of the different rival schools that came into existence in this way, that of Śaṅkarācārya is the best known. In fact what ordinarily passes now-a-days as the Vedānta, and sometimes even as Indian philosophy to outsiders, is really the Advaita Vedānta of the Śaṅkara school. Next comes, in point of popularity, the Viśiṣṭādvaita school of Rāmānujācārya. We shall discuss the philosophy of the Vedānta as developed in these two schools under three heads: The world, God and the Self.

II. THE ŚAṅKARA AND RĀMANUJA SCHOOLS OF THE VEDĀNTA

1. The World

(i) The Unanimous Views

Both Śaṅkara and Rāmānuja reject theories which explain the world (1) either as the product of material elements which by themselves combine together to form objects, (2) or as the transformation of an unconscious nature that spontaneously evolves all objects, (3) or as the product of two kinds of independent reality, such as matter and God, one of which is the material, the other the efficient cause

The unanimous Vedānta conception of the world.

which creates the world out of the first. Both agree that an unconscious cause cannot produce the world, and both hold that even the dualistic conception of two ultimately independent realities, one conscious and another unconscious, producing the world by interaction, is unsatisfactory. Both take their stand on the Upaniṣadic view that 'All is Brahman' (*sarvam khalu idam Brahman*), and matter and mind are not independent realities but grounded in the same Brahman. Both are, therefore, monists or believers in one ultimate Reality in which the world of multiple objects is rooted.

Saṅkara and Rāmānuja are both monists.

Both follow Bādarāyaṇa and reject other views.

Bādarāyaṇa, whom both Saṅkara and Rāmānuja follow, discusses at length the unsatisfactory nature of other alternative theories of the world. Refutation of other views is based both on independent reasoning and the testimony of earlier scriptures. We may briefly sum up here the independent arguments by which the chief theories are refuted.¹

The Sāṅkhya theory that unconscious primal matter (*prakṛti*), composed of the three *guṇas* (*sattva*, *rajas* and *taṇas*), gives rise to the world without the guidance of any conscious agent, is not satisfactory. Because the world is a harmonious system of nicely adjusted objects which cannot be believed to be the accidental product of any unconscious cause. As the Sāṅkhya itself admits, this world, consist-

Refutation of the Sāṅkhya view of creation.

¹ Vide Sec. 2, Chap. II of the *Brahma-sūtra*, and the *Bhāṣya* of Saṅkara and Rāmānuja thereon.

ing of bodies, senses, motor organs and other objects, is made just to fit the diverse souls born into it in accordance with their past deeds. But how can an unconscious nature carry out such a complicated plan? In

The evolution of an ordered world is not possible without conscious guidance. admitting that there is a purpose in the world, but denying at the same time the existence of a conscious creator, the Sāṅkhya commits itself

to an absurd position. Unconscious teleology is unintelligible. Adaptation of means to ends is not possible without conscious guidance. The spontaneous flow of milk from the cow for the sake of a calf is cited by the Sāṅkhya as an example of unconscious but purposive act. But it is forgotten that the cow is a living, conscious being and milk flows impelled by her love for the calf. No undisputed example of an unconscious object performing a complicated purposeful act can be cited. The souls (*puruṣas*) that the Sāṅkhya admits are said to be inactive and, therefore, they also cannot help the evolution of the world.

The Vaiśeṣika theory that the world is caused by the combination of atoms is similarly untenable because these unconscious atoms cannot produce this wonderfully adjusted world. For the regulation of the

The refutation of the Vaiśeṣika view.

atoms in the formation of the world the moral law of *adṛṣṭa* is, of course, admitted by the Vaiśeṣika. But this law is also unconscious and the difficulty is not removed. Besides, how atoms at first begin to move in order to create the world is not explicable. If movement were the inherent nature of the atoms, they would

never cease to move and the dissolution (*pralaya*) of objects, as the *Vaiśeṣika* admits, would never occur. Souls are of course admitted, but they are not admitted to have any intrinsic consciousness. Consciousness arises after the souls are associated with bodies and the organs of knowledge ; and these do not exist *before* creation. Hence atoms cannot receive any conscious guidance even from souls.

Unconscious atoms cannot produce this world.

Against those *Bauddha* thinkers who explain the objects of the world as aggregates of different momentary elements, it is pointed out that momentary things cannot possess any causality. Because to produce an effect the cause must first arise and then act and, therefore, stay for more than one moment, which is against the doctrine of momentariness. Even if the separate momentary elements be somehow produced, no aggregate can be caused, for no substances are admitted (by these *Bauddhas*) which can bring together the elements and produce the desired objects. As consciousness itself is admitted to be the effect of the aggregation of the different elements, it cannot exist before aggregation, and the difficulty of unconscious cause, seen before, arises here also.

Refutation of the *Bauddha* view.

Against those *Bauddhas* who hold the view of subjective idealism (*vijñānavāda*) and declare that the world, like a dream, is only an illusory product of the imagination, the following important objections are pressed by *Śaṅkara*. (a) The existence of external objects cannot be denied because

Bauddha idealism which denies the external world, is untenable.

they are *perceived to exist by all persons*.¹ To deny the existence of a pot, cloth or pillar while it is being perceived, is like denying the flavour of the food while it is being eaten : it is a falsification of immediate experience by sheer force. (b) If immediate experience is disbelieved, then even the reality of mental states cannot be believed in. (c) To say that ideas of the mind illusorily appear as *external objects* is meaningless unless at least something external is admitted to be real. Otherwise, it would be as good as to say that a certain man looks like the child of a barren woman. (d) Unless different perceived objects like pot and cloth are admitted, the idea of a pot cannot be distinguished from that of a cloth, since, as consciousness, they are identical. (e) There is a vital difference between dream-objects and perceived objects : the former are contradicted by waking experience, while the latter are not. External objects perceived during waking experience cannot be said to be unreal so long as they are not felt to be contradicted. So subjective idealism, and along with it also nihilism (*sūnyavāda*), fail to explain the world satisfactorily.

Buddha nihilism is, therefore, untenable too.

Even a deistic theory (held by the Śaivas, Pāśupatas, Kāpālikas and Kālāmukhas) which holds that God is the efficient cause and matter is the material cause of the world is not accepted. The chief objection raised is that as such a view is based not on the Vedas, but

Deistic theories of creation are not tenable.

¹ For this fourfold classification of non-Vedic deistic schools vide Rāmānuja's *Bhāṣya* on 2.2.35, which quotes *Śaivāgama*.

on independent reasoning and ordinary human experience, it should tally with what we observe in life ; but it does not do so. So far as our experience goes, a spirit can act upon matter only through a body, consisting of organs of perception and movement. Again his activity is caused by some motive, such as attainment of pleasure and removal of pain. But God is said to be devoid of body as well as passions and desires. In the light of empirical experience we fail, therefore, to understand the manner as well as the motive of God's creation of the world.

(ii) Rāmānuja's Conception of the World

But in spite of their agreement in the above respects,

Rāmānuja accepts the Upaniṣadic account of creation literally. Śaṅkara and Rāmānuja differ as to the exact way the world arises out of the one Reality, Brahman.

Rāmānuja takes the Upaniṣadic accounts of creation, stated previously, in a literal sense. He holds that the Omnipotent God creates the manifold world out of Himself by a gracious act of will. Within the All-inclusive God (Brahman) there are both unconscious matter (acit) and the finite spirits (cit). The first is the source of the material objects and as such called

The world is created by God from matter which exists in Him.

prakṛti (i.e. root or origin) after the *Śvetāśvatara-Upaniṣad*,¹ the *Purāṇas* and *Smṛtis*, whose authority Rāmānuja highly values. This *prakṛti* is

¹ *Śvet.*, 4.5 (ajām ekām lohita-śukla-kṛpām, etc.) and 4.10 (māyām tu prakṛtim vidyāt, māyīnam tu Mahēśvaram; tasya avayavabhūtsistu vyāptam sarvām idam jagat). Also *vide* *Brahma-sūtr.* 1.4.8 and Rāmānuja's *Bhāṣya* thereon.

admitted, as in the Sāṅkhya, to be an uncreated (aja), eternal reality. But unlike the Sāṅkhya, Rāmānuja believes that it is a part of God and controlled by God just as the human body is controlled from within by the human soul. During the state of dissolution (pralaya) this primal unconscious nature or prakṛti remains in a latent, subtle (sūkṣma) and undifferentiated (avibhakta) form. God creates out of this the world of diverse objects in accordance with the deeds of the

Three subtle elements are first created and then mixed up together to form the gross elements.

souls in the world prior to the last dissolution. Impelled by the omnipotent will of God the undifferentiated subtle matter gradually becomes transformed into three kinds of subtle elements—fire, water and earth. These differentiated elements manifest also the three kinds of qualities known as sattva, rajas and tamas. Gradually the three subtle elements become mixed up together and give rise to all gross objects which we perceive in the material world.¹ In every object in the world there is a mixture of three elements. This process of triplication is known as trivṛtkaraṇa.

Rāmānuja holds, therefore, that creation is a fact and the created world is as real as Brahman. Regarding the Upaniṣadic texts which deny multiplicity of objects and assert the unity of all things, Rāmānuja holds that these texts do not mean to deny the reality

¹ Vide *Sribhāṣya*, *Vedāntasāra* and *Vedāntadīpa* on 1.4.8-10, 1.1.8 and 2.1.15 (note that the *guṇas* are conceived here, after the *Gītā*, as qualities, and as produced by Prakṛti, not as the essence thereof).

of the many objects, but only teach that in all of them there is the same Brahman, on which all are dependent for existence, just as all gold articles are dependent on gold. What the Upaniṣads deny is the independence of objects, but not their dependent existence.

It is true, Rāmānuja admits, that God has been

Mayā means the wonderful power of real creation that is in God.

described (in the *Śvetāśvatara*) as

wielder of a magical power (*māyā*),

but this only means that the inscrutable

power by which God creates

the world is as wonderful as that of a magician. The

word 'māyā' stands for God's power of creating

wonderful objects (*vicitrārtha-sargakāri śakti*). It also

stands sometimes for *prakṛti* to signify her wonderful creativity.¹

Rāmānuja denies, therefore, that creation and the created world are illusory. To

Rāmānuja holds that all knowledge is true, strengthen this position he further holds that all knowledge is true (*yathārtham sarva-vijñānam*) and that

there is no illusory object anywhere. Even in the case of

the so-called illusory snake in the rope, he points out that

the three elements (fire, water, earth) by the mixture of

which a snake is made, are also the elements by the mixture

of which a rope is made; so that even in a rope there is

something of a snake and this common element really

existing in the rope is perceived when we take it for a snake.

No unreal object is perceived then. The constituent

elements of every object being in every other thing, every

so-called illusion can be similarly explained away. This

theory of Rāmānuja resembles in essential respects the

view of some modern realists like Boodin, who hold that

all immediate experience of objects is true on the strength

of the quantum theory of Schrödinger, according to

which each of the electrons, which compose material

¹ *Sribhāṣya*, 1.1.1.

objects, pervades the whole world, so that "Everything is immanent in everything else."¹

(iii) Sāṅkara's Conception of the World

Sāṅkara finds it difficult to reconcile the Upaniṣadic statements of creation, taken in the literal sense, with those denying the world of multiplicity. Considered in the light of the general trend and spirit running throughout the Upaniṣads, the stories of creation seem, to him, to be out of joint. Description of Brahman as really devoid of all assignable marks becomes unintelligible if His creatorship is real. The teachings about the disappearance of all multiplicity on the realization of Brahman cannot also be understood. If the world were real how could it disappear? The dawn of the knowledge of Reality can dispel only the unreal appearing as real, not what is really real. This idea furnishes Sāṅkara with the clue to the mystery of the world. If the world is a mere appearance, as our dream objects are or as objects appearing in illusion are, then the present appearance of the world and its disappearance on the knowledge of Reality become intelligible.

Sāṅkara's problem :
How to reconcile the Upaniṣadic accounts of creation with the denial of plurality?

Reconciliation lies in understanding creation as a magic show. This reconciliation is suggested by the Upaniṣads themselves. Even in the Rg-veda² the one Indra (God) is said to appear in many forms through powers of creating illu-

¹ Vide J. E. Boodin's paper on 'Functional Realism,' *The Philosophical Review*, March, 1934.

² Rk., 6.47.18.

sion (māyā). The *Bṛhadāraṇyaka* also accepts this.¹ The *Svetāśvatara* clearly states that the origin (prakṛti) of the world lies in the magical power (māyā) of God.²

Māyā as a power of God is indistinguishable from Him, just as the burning power of fire is from the fire itself. It is by this that God, the Great Magician, conjures up the world-show with all its wonderful objects. The appearance of this world is taken as real by the ignorant, but the wise who can see through it finds nothing but God, the one Reality behind this illusory show.

Māyā, the magical power of creation, is indistinguishable from God.

If we try to understand the process by which ordinary illusions in life take place, we find that an illusion, say, of snake in a rope, is due to our ignorance of what really is there behind the appearance, i.e. ignorance of the substratum or ground (adhiṣṭhāna), in this case, the rope. If we could know the rope as the rope, there would be no illusion about it. But mere ignorance of the rope cannot give rise to the illusion. For, otherwise, even a person who has never known what a rope is would always see serpents in things. The ignorance creating an illusion does not simply conceal from our view the real nature of the ground, the rope, but positively distorts it, i.e. makes it appear as something else. Concealment (āvarana) of reality and distortion

Creation understood in the light of an ordinary illusion.

Ignorance, with its double function of concealment and distortion.

¹ 'Indro māyābhiḥ puru-rūpa iyate.' Vide *Bṛhad.*, 2.5.19 and Śaṅkara thereon.

² 'Māyām tu prakṛtim vidyāt, māyinaṁ tu Maheshvaram.' Vide *Svet.*, 4.10. and Śaṅkara thereon.

(vikṣepa) of it into something else in our mind are then the two functions of an illusion-producing ignorance (avidyā or ajñāna).

When an illusion is produced in us by some one else, for example, when a magician makes one coin appear as many to us, it is an illusion for us, the perceivers, and not for the conjurer. From our standpoint, then, illusion is the product of our ignorance, which prevents us from seeing the real nature of the thing and which makes us see something else in its place. If any spectator can persist to see the one coin as it is, the magician's wand will create no illusion for him. For the magician, the illusion is only a conjuring will, by which his spectators are deceived, and not himself.

In the light of such cases, māyā, the cause of the world-appearance, may also be understood from two standpoints. For God, māyā is only the will to create the appearance. It does not affect God, does not deceive Him. For ignorant people like us, who are deceived by it and see the many objects here instead of one Brahman or God, māyā is an illusion-producing ignorance. In this aspect māyā is also called, therefore, 'ajñāna' or 'avidyā' (synonyms for 'ignorance') and is conceived as having the double function of concealing the real nature of Brahman, the ground of the world, and making Him appear as something else, namely, the world. In so far as māyā *positively* produces some illusory appearance it is called positive ignorance (bhāva-rūpam ajñānam); and

The magician's show deceives only the ignorant, but not himself.

The conception of māyā as a magic power and producer of the world-show.

in so far as no beginning can be assigned to the world, *māyā* is also said to be beginningless (*anādi*). But, for those wise few who are not deceived by the world-show, but who perceive in it nothing but God, there is no illusion nor, therefore, illusion-producing *māyā*. God to them is not, therefore, the wielder of *māyā* at all.

We have seen previously that Rāmānuja, following the *Svetāśvatara*, speaks also of *māyā*, but he means thereby either God's wonderful power of real creation or the *eternal*, unconscious primal matter which is in Brahman and which is *really* transformed into the world. Śaṅkara's interpretation of *māyā* differs from Rāmānuja's. Śaṅkara also speaks of *māyā* as the power of God; but this creative power, according to him, is not a permanent character of God, as Rāmānuja thinks, but only a free will which can, therefore, be given up at will. The wise who are not deceived by the world-appearance need not conceive God at all as the bearer of this illusion-producing power. Besides, even when conceived as a power, *māyā* is not a distinct entity in Brahman, but inseparable and indistinguishable from it as the burning power is from fire, or will is from the mind that wills. Even when Śaṅkara identifies *māyā* with *prakṛti*, he means nothing more by it than that this creative power is the source or origin (*prakṛti*) of world-appearance, to those who perceive this appearance. The difference between Rāmānuja and Śaṅkara, then, is that while, according to Rāmānuja, the matter which exists in God (and, therefore, also God¹) really undergoes modification,

¹ Rāmānuja himself tries, of course, to avoid this deduction partly by saying that the essence (*svarūpa*) of God does not change. How far this is consistent we shall consider hereafter.

Saṅkara holds that God does not undergo any real change; change is only apparent, not real.

Illusory modification of any substance, as of the rope into the snake, is called *vivarta*, and real modification, as of milk into curd, is called *pariṇāma*. Saṅkara's theory of creation, as described above, is, therefore, known as *vivarta-vāda* and is distinguished from the Sāṅkhya theory of evolution (by the real modification of prakṛti) which is called *pariṇāma-vāda*. Rāmānuja's theory also is a kind of *pariṇāma-vāda*, because he admits that the unconscious element in God really changes into the world. *Vivarta-vāda* and *pariṇāma-vāda* both agree, however, in holding that the effect is already contained somehow in its cause and, therefore, both come under *satkārya-vāda*, or the theory that the effect (kārya) is existent (sat) in the cause, and is not a new thing. The process of the imaginary attribution of something to where it does not exist is called *adhyāsa*. In modern psychological terminology a process of this kind is called projection. In all illusion there is such projection (*adhyāsa*), the serpent is projected (*adhyasta*) by imagination on the rope, and the world on Brahman.

Rāmānuja believes in real change, but Saṅkara does not.

Pariṇāma-vāda and *Vivarta-vāda* are the two forms of *Satkārya-vāda*.

The Upaniṣadic accounts of creation, then, are to be understood in the sense of the evolution of the world out of Brahman through its power of *māyā*. This *māyā*, Saṅkara admits, is in some scriptures called also *avyakta* or even *prakṛti* having the

Māyā is sometimes called *prakṛti*.

three elements of *sattva*, *rajas* and *tamas*. But this should not be mistaken to be the same as the *Sāṅkhya* doctrine in which *prakṛti* is an independent reality.¹ It is absolutely dependent on God.

In addition to the advantages of consistent interpretation of scriptures, the theory of *vivarta*, *Saṅkara* points out, gives also a more rational explanation of creation. If God is the creator of the world and creates the world out of any other substance like matter, then in addition to God, another reality is to be admitted and God ceases to be the all-inclusive only reality; His infinity is lost. But if that matter be conceived as something real and *within* God, and the world be conceived as a real transformation of it, we have to face a dilemma.² Either matter is a part of God, or identical with the whole of God. If the first alternative is accepted (as *Rāmānuja* does), then we are landed into the absurdity that God, a spiritual substance, is composed of parts like material substances, and is consequently also liable to destruction, like such objects. If the second alternative (namely that primal matter is the whole of God) be accepted, then, by the transformation of matter, God is wholly reduced to the world and there is no God left after creation. Whether God changes partly or wholly, if change be real, then God is not a permanent, unchanging reality. He then ceases to be God. These

¹ *Vide* *Saṅkara* on *Brahma-sūtr.*, 1. 4. 3 and on *Svetāśvatara*, 4. 5 and 4. 11.

² *Brahma-sūtr.*, 2. 1. 26-28.

difficulties are avoided by vivarta-vāda according to which change is apparent.

These difficulties are felt also by Rāmānuja. But he thinks that the mystery of creation is beyond human intellect, and we are to accept the account of creation given in the scriptures. As for difficulties, once we admit that God is omnipotent, omniscient and has wonderful powers, nothing should be thought impossible for him.¹ Though Saṅkara also believes that without the help of the revealed scriptures the mystery cannot be solved simply by the unaided human reasoning (*kevalena tarkaṇa*),² he points out that the scriptures themselves have told us how the many can illusorily appear out of the one. Following the light shed by the scriptures we can employ our reasoning and understand, even in the likeness of our ordinary experiences of illusion, the mystery of creation so far as it is humanly possible.

(iv) In what sense Saṅkara calls the World Unreal?

But while speaking of Saṅkara's theory of creation, it is necessary to warn the reader against a very common misunderstanding of his theory, for which some of his latter-day followers also are partly responsible. Saṅkara wants us to understand that the world is like a dream or illusion but is *not* identical with it. If he believed that the objects we perceive normally in waking experience are of the *same* status as dream

The world is not a dream.

¹ Vide *Sribhāṣya* on 2. 1. 26-28 and 1. 1. 3

² Vide Saṅkara[on *Brahma-sūtra*], 2. 1. 27.

or illusory objects, then he would accept subjective idealism. But we find that he

Dreams are contradicted by waking experience.

rejects such idealism of the vijñānavādins and asserts in that connection¹ that the objects of ordinary perception do not possess the same status as dream-objects, because the latter are contradicted by waking experience, while the former are not. Contradiction (bādha) is the test of error, whereas non-contradiction (abādhitatva) is the test of truth. The world is unreal in the sense that it is contradicted by the experience of one who realizes that Brahman is the only reality. Till the world-appearance is so contradicted by that superior experience, it enjoys uncontradicted reality.

This position of Saṅkara has been developed later into the well-known theory of three-fold existence (sattā-traividhya) corresponding to three levels of experience. Dream-experience and

The three levels of experience and three-fold existence corresponding to them.

ordinary experience of illusion (of the snake-rope kind) stand lowest and the objects of such experience enjoy the lowest kind of existence. Such existence is named prātibhāsika-sattā, because objects possessing it exist only so long as they appear to some mind. The reality of such experience and its objects is disproved when normal waking experience contradicts them. The objects of normal experience enjoy, therefore, an existence superior to that of dreams and illusions. Normal waking experience is known as practical or empirical experience (vyāvahārika), because

¹ Vide *Brahma-sūtra*, 2, 2, 28.

our practical life is based on this. The existence of the objects of such experience is called practical or empirical existence (*vyāvahārika-sattā*). But even such experience, with its objects, is contradicted by the supreme experience, namely, the realization of Brahman (*Brahma-jñāna*). As such knowledge is nothing other than the immediate intuition (*aparokṣānubhūti*) of the Self itself, there is no distinction here between experience and object: both are one. This supreme experience, which is another name for Ātman or Brahman, has absolute existence (*pāramārthika-sattā*), because there is nothing to contradict it. The reality of these three kinds of existence—merely apparent (or subjective), empirical and absolute—is contrasted with utter falsity (*alikatva* or *tucchatva*), as of the child of a barren woman. The latter does not even appear as an object of any experience, and there is no question of its being contradicted, whereas even an illusory serpent at least appears to exist in some experience, however short-lived it may be.

The objects of ordinary empirical experience (*vyāvahārika*) stand midway between illusory or dream objects (*prātibhāsika*) and Brahman or the Absolute Reality (*pāramārthika-sattā*). They are real for our sense experience, but not ultimately real, or, as Kant would say, they are empirically real and transcendently ideal.

(v) Rāmānuja's Criticism of the Advaita Theory of Illusion

Rāmānuja who lived long after Śaṅkara had the opportunity of criticizing severely the views of Śaṅkara as well as of his followers, in the course of his commentary on the *Brahma-sūtra*. We are indebted to him for exposing many of the obscure

The difficulties of the Advaita theory of Ignorance.

points of the Advaita school. Though the charges raised by Rāmānuja have been replied to by the Advaitins, they have great value for understanding more clearly both Rāmānuja and Śaṅkara. We shall mention here Rāmānuja's chief objections against the Advaita theory of māyā or ajñāna and also show briefly how they can be met.

Where does the Ignorance (ajñāna), that is said to produce the world, exist? It cannot be said to exist in an individual self (jīva),

(1) Where does Ignorance exist? because individuality is itself produced by Ignorance and the cause cannot depend on its effect. Neither can

Ignorance be said to be in Brahman, because then it ceases to be omniscient.

The reply to this, in defence of Śaṅkara, would be that even if Ignorance be said to be in the

These difficulties are based on some misconception. individual self, the difficulty arises only if we regard the one as preceding the other. But if we regard Ignorance and individuality as but the two inter-

dependent aspects of the same fact, as a circle and its circumference, or a triangle and its sides, or fatherhood and sonship, the difficulty does not arise. But if, on the other hand, Brahman be regarded as the locus of Ignorance, even then the difficulty can be removed by removing a misunderstanding on which it is based. Māyā in Brahman is Ignorance only in the sense of the power of producing ignorance and illusion in individuals; it does not affect Brahman any more than the magician's power of creating an illusion affects his own knowledge.

It is said that māyā or ajñāna conceals the real nature of Brahman. But Brahman is

(2) If Ignorance conceals Brahman, then its self-revealing nature is destroyed. admitted to be essentially self-revealing. If māyā conceals Brahman it means that His self-revealing nature

is destroyed by it and Brahman ceases to be.

The reply to this is that Ignorance conceals Brahman in the sense of preventing the ignorant individual from realizing His real nature, just as a patch of cloud conceals the sun by preventing a person from perceiving the sun. So Ignorance does no more destroy the nature of Brahman

than the cloud destroys the self-manifesting nature of the sun. Self-manifestation means manifestation of itself in the absence of obstacles—and not in spite of obstacles. The sun does not cease to be self-revealing because the blind cannot see it.

What is the nature of the Ignorance? Sometimes the Advaitins say that *māyā* is indescribable (*anirvacanīya*), it is neither real nor unreal. This is absurd. Because our experience shows that things are either real or unreal. How can there be a third category besides these two contradictories?

The reply to this is that *māyā*, as well as every illusory object, is said to be indescribable owing to a genuine difficulty. In so far as it appears to be something, an illusion or illusory object cannot be said to be unreal like a square-circle or the son of a barren woman, which never even appears to exist. Again in so far as it is sublated or contradicted afterwards by some experience, it cannot be said to be absolutely real like *Ātman* or *Brahman* whose reality is never contradicted. *Māyā* and every illusory object have this nature and compel us to recognize this nature as something unique and indescribable in terms of ordinary reality or unreality. To say that *māyā* is indescribable is only to describe a fact, namely, our inability to bring it under any ordinary category, and it does not mean any violation of the law of contradiction. In fact as 'real' means here the 'absolutely real' and 'unreal' 'the absolutely unreal,' they do not constitute a pair of contradictories any more than two words like 'extremely cold' and 'extremely hot' do.

Again sometimes, *māyā* or *avidyā* is said by the Advaitins to be positive ignorance (*bhāva-rūpam ajñānam*). This is also meaningless. Ignorance means want of knowledge, and how can it be positive then?

The reply in defence would be that as the illusion-producing ignorance is not merely an absence of the knowledge of the ground of illusion, but positively makes this

ground appear as some other object. it is properly described as positive, in this sense.

Granting that *māyā* is something positive, how can it be destroyed by the knowledge of Brahman? Nothing that positively exists can be removed from existence by knowledge.

(5) How can positive Ignorance be destroyed?

The reply is that if the word 'positive' be understood in the sense given above, this misunderstanding would not arise. In our daily experience of illusory objects, like the serpent in a rope, we find that the object positively appears to be there and yet it vanishes when we have a clear knowledge of the ground of the illusion, *viz.* the rope.

(vi) The Advaita Theory of Error

We have already noticed that Rāmānuja makes an attempt to deny the possibility of illusion altogether, on the ground that every apprehension is true. If his contention be true, then the Advaita position breaks down altogether. The Advaitins, therefore, take great care to discuss the nature of error, and their literature on the theory of error is so vast that we can mention here only a few salient points, relevant to our discussion.

Rāmānuja holds that as the constituents of every object are present in every other object (all objects being made out of the mixture of three elements), there can be no illusion. But even if some common characters be granted to exist in two objects like snake and rope, we should not ignore that there are also differences between them, otherwise all things would appear alike. Distinctions of appearances in spite of the commonness of component substances must then be admitted. *Illusion concerns this appearance.* When a rope appears

An illusory object as rope, the knowledge is veridical. If it appears to be immediately present, it appears as a snake it is false. The Advaitins lay stress on the point that in our experience of illusion the illusory object immediately appears to be present before us. So it is an object of immediate apprehension like 'This is a

snake,' and not merely an object of wrong inference. The illusory object, whose nature, as we have seen, cannot be described as utterly unreal or absolutely real, is called an indescribable (*anirvacaniya*) something. The appearance of the illusory object is, therefore, said to be the product of an indescribable creation (*anirvacaniya sṛṣṭi*). Just as the world is the creation of a long-enduring Ignorance, which is termed the

Such an object is a creation of ignorance. *root-ignorance* (*mūlāvidyā*), ordinary occasional illusions are the creation of a *similar ignorance* (*tulāvidyā*). Both

enjoy *objectivity*, though of two different grades; both are *creations* of ignorance. This Advaita theory of error is known as *anirvacaniya-khyāti-vāda* (i.e. the view that the indescribable object appears in illusion), whereas Rāmānuja's theory of non-illusion is sometimes called *sat-khyāti-vāda* (i.e. the view that the real appears in so-called illusion).

To sum up the Vedānta theory of the world:

A comparative estimate of the views of Saṅkara and Rāmānuja regarding the world.

According to the Vedānta, the world is grounded in God. While Rāmānuja holds that God is the ground of the world as any organic whole is of its parts, Saṅkara believes that God is the ground of the world as the rope is of the serpent or the mind is of any dream. Rāmānuja believes, therefore, that the world is absolutely real like God, being a part of God. But Saṅkara believes that the world is only practically real, real for all practical purposes and till one realizes Brahman, its ground. The reality of the world is then not on a par with that of dream-objects, but superior to it; neither is it on a par with the reality of God, but inferior to it. Saṅkara's theory thus should be called not nihilism but *phenomenalism*. Though the world is, in a certain sense, illusion according to him, it is not a *groundless illusion* but is, to

borrow Leibniz's phrase, a well-grounded phenomenon (*phenomena bene fundata*). What is falsified of the world by the knowledge of Brahman is the diversity of particular phenomena, but not the pure existence on which it is grounded. In this aspect of pure existence, the world is in every sense identical with God and is eternally real like God, as Śaṅkara clearly declares.¹ There are two aspects of the teachings of the Upaniṣads, as well as of Śaṅkara's views, the negative and the positive. On the negative side, the world is an appearance, on the positive, the world is God. Unfortunately, the negative doctrine had been unduly stressed by some of his followers and it had its baneful effect on Indian life. But there is no reason why we should not emphasize the positive aspect which inspired the Upaniṣadic sages with the sense of a living presence of God in the world and made their life so joyous. It is thus that the Vedānta can redeem life from the sloth that its misunderstanding has caused and spiritualize the daily life in its practical sphere.

2. God

We have seen that God was conceived even as early as the Vedas in two aspects: God pervades the world, but He is not exhausted in the world; He is also beyond it. God is both immanent and transcendent. These two aspects of God persist

According to the Vedas, Upaniṣads and the Vedānta, God is both immanent and transcendent.

¹ Vide Bhāṣya on *Brahma-sūtra*, 2.1.16: "Yathā kāraṇam Brahma triṣu kāleṣu sattvam na vyabhicarati, tathā kāryam api jagat triṣu kāleṣu sattvam na vyabhicarati."

throughout the Upaniṣads and the later Vedānta, though the meanings of transcendence and immanence are not the same in all thinkers. It is usual to call the theory of the presence of God in all things 'pantheism' and Vedānta is commonly described by this name. Pantheism etymologically means all-God-theory. But if all is God, the question remains open whether God is the mere totality of all objects of the world, or the totality of things and something more. When such distinction is made, the word 'pantheism' is generally confined to the first view, whereas 'panentheism' (a word coined by a German philosopher, Krause) is used for the second. To avoid the ambiguity of the word 'pantheism,' and to remind ourselves of the fact that God in Vedānta is not simply immanent, but also transcendent, we should call the Vedānta theory of God panentheism, rather than pantheism.

Another point of agreement among Vedāntins is that all of them believe that the knowledge of the existence of God is, at the first instance, obtained not by reasoning but from the testimony of the revealed scriptures. It is admitted, of course, that on the perfection of religious life the presence of God can be realized by the devout souls. But to start with, we have to depend on an indirect knowledge of God through the undoubted testimony of the scriptures. Scarcely any attempt is made, therefore, in the Vedānta, as in the Nyāya and other theistic systems, to adduce purely logical proofs for the existence of God. Arguments are confined generally to showing the inadequacy of all theories of God, not based on scriptures, and to the justification of the scriptural views. This attitude of the Vedānta appears to be dogmatic and is sometimes made the object of criticism. It should be noted, however, that

Belief in God starts from an acceptance of scriptural testimony.

No independent argument can prove God.

even many Western philosophers (like Kant, Lotze and others) have ever and again rejected

Testimony of Kant, Lotze and others on this. such proofs as inadequate. Lotze makes it clear that unless we start with some faith in God, the rational proofs are of little avail. As he puts

it: "Therefore, all proofs that God exists are pleas put forward in justification of our faith." This faith according to him springs from "the obscure impulse which drives us to pass in our thought—as we cannot help passing—from the world given in sense to a world not given in sense, but above and behind sense." ¹ According to the Vedānta also an initial faith is necessary for religious life and thought. This faith, though starting from a personal feeling of inade-

Reason is necessary to justify faith already present.

quacy and inquiet and a longing for something higher, remains a mere blind groping in the dark till it is enlightened by the teachings of the scriptures that show the way to the reali-

zation of God. Reasoning is necessary for the understanding of the teachings, for removing doubts, and realizing their cogency. By itself reasoning is an empty form or method of thinking which can work only when materials are supplied. The scriptures supply to reason the matter for speculation, argumentation and meditation. This kind of dependence of reason on matter supplied from a non-rational source is nothing peculiar to theology. Even the greatest discoveries in science can be traced back to some non-rational origin like intuitive flashes of truth in imagination which reasoning afterwards attempts to justify, by further observation, experiment, proof and elaboration. "Dialectic," says Bergson, ² "is necessary to put intuition to the proof." Though all Vedāntins primarily depend on the scriptures for belief in God, they make full use of reasoning in the justification and elaboration of that belief. They learn from the Upaniṣads that God is the Infinite, Conscious, All-inclusive Reality, the Creator of the universe as well as its Preserver and Destroyer. Each one tries in his own way to develop what he thinks to be the most consistent theory of God.

¹ Lotze, *Outlines of a Philosophy of Religion*, pp. 8-10.

² *Creative Evolution*, p. 251, Eng. Tr. by A. Mitchell.

(i) Rāmānuja's Conception of God

God, according to Rāmānuja, is the Absolute Reality possessed of two integral parts, matter and the finite spirits. God is the Absolute Reality, possessed of matter and finite souls. Brahman is said by him to be the only Reality in the universe in the sense that outside or independent of God there is no other reality. But God contains within Himself the material objects as well as the finite souls which are real. The Absolute One contains the many. This monism of Rāmānuja is known, therefore, as Viśiṣṭādvaita which means the Unity (advaita) of Brahman possessed (viśiṣṭa) of real parts (the conscious and the unconscious). It is not a distinctionless unity. Three types of distinction (bheda) are generally distinguished by the Vedāntins. The distinction that anything—say, a cow—has from things of other classes, such as horses, asses, is called a heterogeneous distinction (vijātiya-bheda). The distinction that one cow has from another cow (i.e. an object of the same class) is called a homogeneous distinction (sajātiya-bheda). In addition to these two kinds of external distinctions, there is a third kind, i.e. internal distinction (svagata-bheda), which exists within an object, between its different parts, such as between the tail and the legs of the same cow. Judged in the light of this threefold classification of distinctions, Rāmānuja's Brahman is said to be devoid of the two kinds of external distinctions (vijātiya and sajātiya), because there is nothing besides God, either similar or dissimilar to Him. But God is possessed of internal distinctions (svagata-bheda), as there are within Him

different conscious and unconscious substances which can be mutually distinguished.

God is possessed of an infinite number of infinitely good qualities such as omnipotence, omniscience, benevolence. Therefore,

God has all good qualities.

God is not characterless (nirguṇa), or indeterminate, but possessed of qualities (saguna). When the Upaniṣads deny qualities of Brahman, they really mean that God is free from all bad qualities or imperfections. God really creates the world, sustains it and withdraws it. When the world is withdrawn and its objects are destroyed, even then there remains in God matter in an undifferentiated, homogeneous state, as well as the souls, because both are eternal. Objects made by the modification of matter undergo change, growth and decay, but matter out of which they are created always remains there. Similarly the spirits always remain, though their bodies may change or perish. In the state of dissolution, when objects are absent, Brahman remains with pure matter and bodiless souls in an unmanifested form (avyakta). This

God as the unmanifested cause.

may be called the casual state of Brahman (kāraṇa-brahma). When again objects are created, God becomes manifested as the world of objects and embodied souls. This second manifested form of God may be called its effect-state (kārya-brahma).

God as the manifested effect.

Those texts of the Upaniṣads which deny the existence of objects and describe God negatively as being beyond thought, speech, etc. really indicate the unmanifested state of Brahman.¹

¹ Vide *Sribhāṣya*, 1.1.1, 1.1.2, 2.1.15.

If matter and spirits are parts of God, as Rāmānuja repeatedly asserts, then does not God really undergo modification with the change of matter? Does He not become also subject to the miseries from which the spirits suffer? Are

Rāmānuja's difficulties regarding the relation of God to matter and spirits.

not then all the imperfections and defects which we find in the world really in God? In the face of these difficulties Rāmānuja seems to give up sometimes the imagery of parts and whole and employ other similies. Sometimes he takes recourse to the analogy of the body and the soul. God is the soul of which the material objects and spirits compose the body. Just as the soul controls the body from within, so God controls matter and spirits. He is thus conceived as the Antaryāmin or regulator of the universe from within. With the help of this analogy, Rāmānuja tries to explain away the charge of God's being subject to misery and imperfection. The soul, he says, is not affected by the bodily changes and imperfections; similarly God is not affected by the changes in the universe; He remains beyond them or transcends them. Sometimes again Rāmānuja tries to save God's immunity by the analogy of the king and his subjects. The ruler, in spite of having a body, is not affected by the pleasures and pains suffered by the subjects due to their obeying or disobeying the ruler's laws.¹ These explanations of Rāmānuja show that he is not very sure in his mind as to the exact nature of the relation between God and the universe. The relation between the soul and the body is surely very much different from that between the king and his subjects; and none of these two again contains the relation of whole and parts. Besides, when Rāmānuja also speaks of the universe as a qualifying character (viśeṣaṇa) and God as the substantive (viśeṣya), it is difficult to understand how God remains unaffected by the imperfections of the universe. Rāmānuja himself is aware of the unsatisfactory character of his explanation and in one place he makes an important confession which is not quite in harmony with his general position. The *essence* (svarūpa) of God, he says there, remains unchanged by changes in the Universe, and, therefore, God is unaffected.² If this admission is to be logically followed, then, Rāmānuja has to admit further that matter which is subject to change

¹ Vide *Sribhāṣya*, 2.1.14.

² *Ibid.*

is not essential and internal to God, but externally related to Him. Then his central theory that matter and spirits form *real* parts of God and God is *really* qualified by them becomes considerably weakened. To conceive matter and spirits as really existing within God and as really undergoing change, and to hold at the same time that God is not affected by these changes, is to hold a very precarious position.

Rāmānuja's conception of God is a kind of theism.

Rāmānuja's view of God is theism.

Theism, in this narrow sense, means belief in God who is both immanent and transcendent,¹ and is also a Person, i.e. a self-conscious being possessed of will. We have seen that all these characters are present in Rāmānuja's conception of God.

God is the object of worship and the goal of our religious aspiration. It is by pleasing God through prayer that we can obtain salvation through His mercy.

(ii) Śaṅkara's Conception of God

God, according to Śaṅkara, can be conceived from

From the empirical standpoint God is the omniscient and omnipotent creator, possessed of qualities.

two different points of view. If we look at God from the ordinary practical standpoint (*vyāvahārika dṛṣṭi*) from which the world is believed to be real, God may be considered as the cause, the Creator, the Sustainer, the Destroyer of the world and, therefore, also as an Omnipotent and Omniscient Being. He then appears as possessed of all these qualities (*saguna*). God in this aspect is called *Saguna Brahma* or *Īśvara* in Śaṅkara's philosophy. He is the object of worship.

¹ *Vide Ward, Realm of Ends*, p. 234.

But the world, as we have seen, is conceived by Sāṅkara as an appearance which rests on our ignorance. Description of God as the Creator of the world is true only from the practical point of view, so long as the world-appearance is regarded as real. Creatorship of the world is not God's essence (*svarūpa-lakṣaṇa*) ; it is the description of what is merely accidental (*tatastha-lakṣaṇa*) and does not touch His essence.

Let us try to understand with the help of an ordinary example the distinction that Sāṅkara wants to make here. A shepherd appears on the stage in the rôle of a king, wages war, conquers a country and rules it. Now, the description of the actor as a shepherd gives what he is from the *real point of view*. It is an *essential* description of him (*svarūpa-lakṣaṇa*). But the description of him as a king, ruler and conqueror, is applied to him only from the *point of view* of the stage and his rôle there; it is merely a description of what is accidental to the person (*tatastha-lakṣaṇa*) and does not touch his essence.

Similarly, the description of God as conscious, real, infinite (*satyam, jñānam, anantam* *Brahma*)¹ is an attempt to describe His essence (*svarūpa*), whereas the description of Him as Creator, Sustainer and Destroyer of the world, or by any other characteristic connected with the world, is a mere accidental description and it holds good only from the

But this view of God does not reveal His essence.

From the transcendental standpoint God is consciousness, real and infinite.

¹ *Tait.*, 2.1.

point of view of the world (vyāvahārika-dṛṣṭi). As we can regard the actor on the stage from a point of view other than that of the stage, so we can look at God also from a non-worldly point of view (pāramārthika-dṛṣṭi) and try to dissociate Him from the characters which we ascribe to Him from the point of view of the world. God in this aspect of what He really is, without any reference to the world, is called by Sāṅkara Parambrahma or the Supreme God.

For understanding this higher aspect of God as He is really in Himself (without relation to the world) along with the lower aspect, Sāṅkara constantly draws on the analogy of the magician (māyāvī) as suggested in the *Śvetāśvatara*. The magician is a juggler only to those who are deceived by his trick and who fancy that they perceive the objects conjured up. But to the discerning few who see through the trick and have no illusion, the juggler fails to be a juggler. Similarly, those who believe in the world-show think of God through this show and call Him its Creator, etc. But for those wise few who know that the world is a mere show, there is neither any real world nor any real Creator.

This is the only way, thinks Sāṅkara, in which we can understand in the light of common experience how God can be both in the world and yet beyond it—understand, that is to say, the immanence and the transcendence of God, which are taught by the Upaniṣads. The world, so long as it appears, is in God, the only Reality, just as the snake conjured out of the rope is nowhere else except in the

The analogy of the magician.

Sāṅkara tries to reconcile the immanence and the transcendence of God.

rope. But God is not really touched by the imperfections of the world just as the rope is not affected by any illusory characters of the snake, or even as the actor is not affected by the loss and gain of kingdom on the stage.

Rāmānuja, we have seen, finds difficulty in reconciling the immanence of God with His transcendence. He vacillates in his explanation of how God can be said to be in the world and yet to remain unaffected by the world's imperfections. This difficulty, however, is not peculiar to Rāmānuja alone. It is present in most Western forms of theism also, which, like Rāmānuja's, look upon creation as real.

God as the object of worship is based essentially on a belief in the distinction between the worshipping self and the God worshipped. The reality of the limited self like that of a worldly object is based on ignorance—on the failure to realize that God is the only Reality. Besides, God is worshipped because God is thought of as the creator and controller of the world. So worship and the God worshipped are bound up with our lower standpoint (vyāvahārika-dṛṣṭi) from which the world appears as real and God appears as endowed with the many qualities in relation to the world. It is this Saguna Brahma or Īśvara who can be regarded as an object of worship.

Brahman from the higher or transcendental point of view (pāramārthika-dṛṣṭi) cannot be described by qualities which relate to the world or to the ego. Brahman in this aspect is devoid of all

This reconciliation is difficult for Rāmānuja.

God is an object of worship only when viewed from the lower standpoint.

God from the transcendental standpoint is devoid of all qualities and distinctions

distinctions, external as well as internal (*sajātiya*, *vijātiya* and *svagata bheda*). Here, therefore, Śaṅkara differs from Rāmānuja who believes that God is possessed of at least internal distinction (*svagata bheda*), because within Him there are the really distinct conscious and unconscious realities. Brahman, in this absolutely transcendent aspect, says Śaṅkara, cannot be described at all and it is, therefore, called indeterminate or characterless or *nirguṇa*. The description of Brahman even as infinite, real, consciousness, though more accurate than accidental descriptions, cannot directly convey the idea of Brahman. It only serves to direct the mind towards Brahman by denying of it finiteness, unreality and unconsciousness.¹

Every quality predicated of any subject is a sort of limitation imposed on it. This follows from the logical principle of obversion. If S is P, then it is not non-P and, therefore, non-P is excluded from S, which becomes then limited to that extent. A great Western philosopher, Spinoza, recognizes this and lays down the dictum, 'Every determination is negation.' He also, therefore, thinks that God, the ultimate substance, is indeterminate and cannot be described by any positive qualification. The Upaniṣads recognize this principle and deny of God all predicates, even worshipability.² This conception is developed by Śaṅkara who calls Brahman, in this transcendent aspect, *nirguṇa*.

We have said previously that the world-appearance is due to *māyā*. God regarded as the Creator of the world is, therefore, described as the wielder of *māyā*. Ignorant people like us believe that the world is real and that, therefore, God is really qualified by *māyā*, i.e. possessed of

¹ Vide Śaṅkara's com. on *Tait.*, 2.1.

² Vide *Kena*, 1.5.

the power of creating the world (*māyā-viśiṣṭa*). But really creativity is not an essential character of God, it is only an apparent, accidental predicate (*upādhi*) that we illusorily ascribe to God. God is only apparently associated with creativity (*māyopahita*). God as immanent (*saguṇa*) and God as transcendent reality (*nir-guṇa*) are not two, any more than the man on the stage and that man outside the stage are two. The first is only the apparent aspect of the second. The first is relative to the world, the second is irrelative or absolute.

Distinction between standpoints is always made by

The distinction of us in life and is nothing new or
points of view is made " queer in Advaita philosophy as it
in daily life. may appear to some. In daily life,

we say that a currency note is really paper, but *conventionally* it is money ; a photograph is *really* paper but *appears* as a man ; the image in a mirror *appears* as a real object, but is not *really* so ; and so on. This ordinary kind of distinction between the apparent and the real is philosophically utilized by Vedānta for explaining the relation of God to the world. Thus the *vyāvahārika* and the *pāramārthika*—the empirical (conventional or practical) and the transcendental (absolute or irrelative)—which the Vedānta distinguishes are neither uncommon nor unintelligible. It is only the extension of a common distinction.

Though God as creator is only apparent, yet His importance and value should not be ignored. It is only

The view of God as through the lower standpoint that
immanent leads to that we can gradually mount up to the
of God as transcendent. higher. Advaita Vedānta, like the

Upaniṣads, believes in the gradual revelation of truth in stages through which spiritual progress takes place. The unreflecting man who regards the world as a self-

sufficient reality feels no urge to look beyond it and search for its cause or ground. When he comes to realize somehow the insufficiency of the world and looks for something which sustains the world from behind, he comes to discover God as the Creator and Sustainer of the world. He feels admiration and reverence and begins to pray to the Creator. God thus becomes the object of worship. With the further advancement of thought, so the Advaita thinks, the man may discover that God, whom he reached through the world, is really the only reality, the world is only an appearance. Thus at the first level, the world alone is real ; at the second, both the world and God ; at the last, only God. The first is atheism. The second represents theism as we find in Rāmānuja and others. The last is the Absolute monism of Śaṅkara. Śaṅkara recognizes that the last level has to be reached only gradually through the second. He, therefore, believes in the utility of worshipping God (as Saguna Brahma). For, this purifies the heart and prepares one for gradually reaching the highest view, and without it no God, immanent or transcendent, would ever be found. Śaṅkara gives a place even to the worship of the many deities, because it redeems the spiritually backward at least from utter atheism, and it serves as a stage on the way to the highest truth.

3. *The Self*

The sūtras of Bādarāyaṇa have for their subject-matter God and are, therefore, named *Brahma-sūtra*. But they are written for man, the embodied soul, and,

therefore, called also *Sārīraka-sūtra*. Man, therefore, occupies a central place in the Vedānta. It is for his enlightenment and his salvation that the Vedānta undertakes philosophical discussion. But what is the real nature of man? The Upaniṣads teach us that man is not different from God. But what is the sense in which this teaching should be understood?

(i) Rāmānuja's Conception of the Self,
Bondage and Liberation

Rāmānuja holds that the identity between God and man taught by the Upaniṣads is not really an unqualified one. It is unthinkable that man who is finite can be identical with God in every respect. Man is not different from God in the sense that God pervades and controls man as well as every other thing in the universe. Just as the existence of a part is inseparable from the whole, that of a mode or quality from its substance, or a living body from the soul which controls its life from within, similarly the existence of man is inseparable from God. Identity cannot be asserted, it is true, between two altogether different terms; but it is also meaningless to assert any identity between exactly identical terms; because it would be a needless tautology. Identity can be asserted between two terms which are in some respects different and yet the same at bottom (e.g. between 'the first son of Daśaratha' and 'the husband of

Between self and God there is identity as well as difference.

Sitā'). The Upaniṣadic dictum 'That thou art' (Tat tvam asi) should, therefore, be taken in this last sense. 'That'

The meaning of 'that thou art.'

stands for God, the omniscient, omnipotent creator of the universe. 'Thou' stands for God existing in the form of man, the embodied soul (acid-viśiṣṭa-jīva-śarīrakam). The identity asserted here is, therefore, between God with certain qualification and God with certain other

Qualified monism.

qualification—an identity of the two differently qualified terms which are the same at bottom (viśiṣṭayoraiikyam). In view of this Rāmānuja's philosophy is called Viśiṣṭādvaita or the identity of the qualified.¹

Man, according to Rāmānuja, has a real body and

The human body and soul are both finite.

a soul. The body is made of matter which is a part of God. It is obviously finite. The soul is, of course, not made; it is eternally existing. It is also a part of God, and cannot, therefore, be infinite. The all-pervasive nature of the soul which the Upaniṣads describe cannot, therefore, be taken, in the literal sense. The real sense of the pervasiveness of the soul is that the soul is so subtle (sūkṣma) that it can penetrate into every unconscious material substance.² Having denied

The soul is eternal but infinitely small.

that the soul is infinite, Rāmānuja has to hold, like the Jainas, that it is infinitely small (aṇu). For, if the soul has neither of these two extreme dimensions, it must be admitted to have the medium one, which things composed by the combination of parts (such as tables and chairs) have; and then like such objects the

¹ Vide *Sribhāṣya*, 1. 1. 1.

² *Ibid.*, "vyāpī, ati-sūkṣmatayā sarvāceta nāntaḥ-praveśana-sva bhāvah."

soul also would be liable to destruction. The conscious-

Consciousness is the essential quality of the soul.

ness of the soul is not accidental to it ; it is not dependent on its connection with the body. Consciousness is an intrinsic quality of the soul and it remains under all conditions. In dreamless sleep and even in the state of liberation, when the soul is altogether disembodied, the soul remains conscious of itself as ' I am.' The soul is, therefore, identified by Rāmānuja with what we mean by the word ' I ' or the ' ego ' (aham).¹

The bondage of the soul to the body is due to its karma. As the effect of its karma, the soul is associated with the particular kind of body it deserves. Being embodied, its consciousness is limited by the conditions of the organs of knowledge, and the body it possesses. Though the soul is infinitely small, it illumines or renders conscious every part of the body in which it is, just as a small light illumines the entire room in which it is. It identifies itself with the body and regards it as itself. Egoism (ahaṅkāra) is a name for this identification of the self with the not-self. Avidyā or ignorance consists in this base propensity.² Karma also is sometimes identified by Rāmānuja with this ignorance.

The bondage of the soul is due to karma.

The attainment of liberation must be sought through work and knowledge, because they pave the way for devotion. By work (karma) Rāmānuja means here

The liberation of the soul is sought through work and knowledge.

¹ " Svarūpeṇa eva ahamarthaḥ ātmā ;" " mukten api ahamarthaḥ prakāśate," *Ibid.*

the different obligatory rituals enjoined by the Vedas on persons according to their respective castes and stations in life (varṇāśrama). These should be performed life-long, as bounden duties without any desire for reward, like heaven. Disinterested perfor-

The necessity of performing rituals for destroying karmas.

mance of such duties destroys the accumulated effects of the past deeds which stand in the way of knowledge. For the correct performance of these rituals it is necessary to study the Mīmāṃsā philosophy. Rāmānuja regards, therefore, the study of the Mīmāṃsā as a necessary pre-requisite to the study of the Vedānta. By the study of the Mīmāṃsā and performance of the duties in its light, one comes to realize also that the sacrificial rites cannot lead to any permanent good and cannot help man to attain salvation. This persuades him to study the Vedānta. The

The necessity of the knowledge of Vedānta.

Vedānta reveals to him the real nature of the universe. He comes to know that God is the creator, sustainer and controller of all beings, and that his soul is not identical with the body, but is really a part of God who controls it from within. He further learns that liberation can be attained not by 'study and reasoning,' but only if God is pleased to choose him for liberation.

This study of the Vedānta produces only book-learning and does not bring about liberation. It is true, as the Upaniṣads say, that liberation is brought about by knowledge. But that

The knowledge of God matures into constant remembrance or devotion.

real knowledge is not a verbal knowledge of scriptures ;

for then everyone who reads them would be liberated at once. Real knowledge is a steady, constant remembrance of God (*dhruvā smṛti*). This is variously described as meditation (*dhyāna*), prayer (*upāsana*), devotion (*bhakti*).¹ Constant meditation on God as the dearest object of love, should be practised continuously along with the performance of the obligatory rituals which remove the obstacles to knowledge. Intense remembrance of God, or devotion thus prac-

Constant remembrance turns into immediate knowledge of God.

tised, ultimately matures into an immediate knowledge (*darśana* or *sākṣātkāra*) of God. This is, therefore, the final means to liberation.

This brings about the destruction of all ignorance and karmas by which the body is caused. Therefore, the soul that realizes God is liberated from the body for ever, without any chance of rebirth. We should remember, however, that liberation cannot be attained simply by human efforts. God, pleased by devotion, helps the devotee to attain perfect knowledge by removing obstacles. God's help is necessary for liberation.

God lifts from bondage and misery the man who flings himself at the mercy of God and constantly remembers Him as the only object of love.

Liberation is not the soul's becoming identical with God. The liberated soul having pure consciousness, untainted by any imperfection, becomes, in this respect, similar to God (*brahma-prakāra*). This similarity of nature is what is meant

¹ "Ato...dhyānopāsanaādi-śabde-vācyam jñānam"; "vedanam upāsanam syāt"; "upāsana-paryāyatvāt bhakti-śabdasya," *Ibid.*

by the Upaniṣads which say that the liberated soul attains unity with God.¹

(ii) Saṅkara's Conception of the Self,
Bondage and Liberation

We have found already that Saṅkara believes in unqualified monism. All distinctions between objects and objects, the subject and the object, the self and God are the illusory creation of māyā. He holds fast to the conception of identity without any real difference and tries to follow it out logically in every respect. He accepts, therefore, without any reservation, the identity of the Soul and God, that is repeatedly taught in the Upaniṣads.

Man is apparently composed of the body and the soul. But the body which we perceive is, like every other material object, merely an illusory appearance. When this is realized, the reality that remains is the soul which is nothing other than God. The saying, 'That thou art,' means that there is an unqualified identity between the soul, that underlies the apparently finite man, and God. It is true that if we take the word 'thou' in the sense of the empirical individual limited and conditioned by its body, there cannot be an identity between the 'thou' and 'that,' the supreme Brahman. We have to understand, therefore, the word 'thou' to stand for what is real in man, namely,

¹ Jñānaikākāraśyā Brahma-prakāratā ucyate," *Srībhāṣya*, p. 71 (B. V. & Co. edn.).

the soul. Between this soul and God complete identity exists and is taught by the Vedānta. An identity judgment like 'This is that Devadatta' (which we pass on seeing Devadatta for a second time) makes the above point clear. The conditions which the man had the previous day cannot be exactly identical with those he has the second day. Therefore, there cannot be any identity between the man qualified by one set of conditions with the man qualified by another set. What we mean, therefore, must be that the man, viewed apart from the different conditions, is the same. Similar is the case with the identity taught between the Self and God. The Self, viewed apart from the conditions, i.e. the reality underlying the conditioned individual, is identical with God. Such

Identity judgment is neither tautological nor impossible.

identity judgment is not tautological and superfluous, because it serves the purpose of pointing out that what are illusorily taken as different are really one. The identity that is taught between man and God is a *real* identity between terms which appear as different. Being identical with God, the soul is in reality what God is. It is the supreme Brahman—the self-luminous, infinite, consciousness. This soul appears as the limited, finite self because of its association with the body which is a product of Ignorance.

The body is not composed simply of what we perceive through the senses. In addition to this gross perceptible body, there is also a subtle one, composed of the senses, the motor organs

The gross body and the subtle body are the products of māyā.

(these two groups together being called *indriyas*), vital elements (*prāṇas*), and the internal mechanism of knowledge (*antahkaraṇa*). While the gross body perishes on death, the subtle body does not and it migrates with the soul to the next gross body. Both of these are the products of *māyā*.

Vedānta works, like the Upaniṣads, are not always unanimous regarding the exact process by which and the order in which these products arise out of Brahman through *māyā*. The evolution of the material elements out of Brahman.

The number and nature of the constituents of the subtle body are not also the same according to all writers. According to a well-known account, at first there arise out of Ātman or Brahman the five subtle elements, in the order—ākāśa (ether), vāyu (air), agni (fire), ap (water), kṣiti (earth). These five are again mixed up together in five different ways to give rise to the five gross elements of those names. Gross ākāśa is produced by the combination of the five subtle elements in the proportion,

The subtle elements and the gross ones.

$$\frac{1}{2} \text{ ākāśa} + \frac{1}{4} \text{ air} + \frac{1}{4} \text{ fire} + \frac{1}{4} \text{ water} + \frac{1}{4} \text{ earth.}$$

Similarly each of the other five gross elements is produced by the combination of the subtle elements, in the proportion of half of that element and one-eighth of each of the other four. This process is known as combination of the five (*pañcīkaraṇa*). The subtle body is made of the unmixed subtle elements, and the gross body as well as all gross objects of nature is produced out of the gross elements which arise by the mixture of the five subtle ones.

Due to ignorance, the beginning of which cannot be assigned, the soul erroneously associates itself with the body, gross and subtle. This is called bondage. In this state it forgets that it is really Brahman. It behaves like a finite, limited, miserable being which runs after temporal worldly objects and is pleased to get them, sorry to miss them. It identifies itself with the finite body and mind (*antaḥkāraṇa*) and thinks 'I am stout,' 'I am lame,' 'I am ignorant.' Thus arises the conception of the self as the 'Ego' or 'I.' This limited ego opposes itself to the rest of existence, which is thought to be different from it. The ego is not, therefore, the real self, but is only an apparent limitation of it.

Bondage is the soul's association with the body through ignorance.

The ego (*aḥam*) is not the self (*ātman*).

Consciousness of the self also becomes limited by the conditions of the body. The senses and *antaḥkāraṇa* (the internal organ of knowledge) become the instruments through which limited consciousness of objects takes place. Such empirical, finite knowledge is of two kinds, immediate and mediate. Immediate knowledge of external objects arises when, through any sense, the *antaḥkāraṇa* flows out to the object and is modified into the form of the object. In addition to immediate knowledge (*pratyakṣa*), the Advaitins admit five different kinds of mediate knowledge, namely, inference (*anumāna*), testimony (*śabda*), comparison (*upamāna*), postulation (*arthāpatti*) and non-cognition (*anupalabधि*). The Advaitins agree,

The consciousness of the self in bondage is limited.

in the main, with the Bhāṭṭa school of Mīmāṃsā regarding these sources of knowledge. As the Bhāṭṭa views have been already stated we need not repeat them here.¹

When a man is awake, he thinks himself identified with the gross body, as well as with the internal and external organs.

Waking experience, dream and dreamless sleep—the three levels of ordinary consciousness.

When he falls asleep and dreams, he is still conscious of objects that arise from memory-impressions, and,

therefore, the feeling of his limitation as a subject or knower, opposed to objects still persists there. When he has deep, dreamless sleep, he ceases to have any ideas of objects. In the absence of objects, he ceases to be a knower as well. The polarity of subject and object, the opposition between the knower and the known, vanishes altogether. He no longer feels that he is confined to and limited by the body. But yet consciousness does not cease in dreamless sleep; for otherwise how could we remember at all on awaking from sleep that we had such a state? How could we report 'I had a peaceful sleep, had no dreams,' if we were unconscious then?

The study of dreamless sleep gives us a glimpse of what the self really is when dissociated from its feeling of identity with the body. The soul in its intrinsic state is not a finite, miserable being. It does not separate itself from the rest of existence and does not limit itself by a feeling of the 'I' (aham) opposed to a 'thou' or 'this' or 'that.' I also

¹ For a critical discussion of the Advaita theory of knowledge, vide D. M. Datta, *The Six Ways of Knowing*.

free from all worries that arise from hankerings after objects. The self, really, then is an unlimited consciousness and bliss.

The attempt of Saṅkara and his followers is to show how this intrinsic, pure condition of the self can be regained. The fact that the blissful state of dreamless sleep is not permanent and man once more returns to his finite, limited, embodied consciousness on waking up, shows that there remain even in dreamless sleep, in a latent form, the forces of karma or avidyā which draw man into the world. Unless these forces, accumulated from the past, can be completely stopped, there is no hope of liberation from the miserable existence which the self has in this world.

The study of the Vedānta helps man to conquer these deep-rooted effects of long-standing ignorance. But the study of the truths taught by the Vedānta

Vedānta helps man to destroy ignorance completely.

would have no effect unless the mind is previously prepared. This initial preparation, according to Saṅkara, is not the study of the Mīmāṃsā sūtras, as Rāmānuja thinks.

The Mīmāṃsā, which teaches the performance of sacrifices to the various gods, rests on the wrong conception of a distinction between the worshipper and the worshipped.

Preparation, necessary for the study of Vedānta, is not the study of any ritualistic work.

Its spirit is, therefore, antagonistic to the absolute monism taught by the Vedānta. Far from preparing the mind for the reception of the monistic truth, it only helps to perpetuate the illusion of distinctions and plurality from which man already suffers.

The preparation necessary for undertaking the study

But the fourfold culture of the mind alone makes one a fit student of Vedānta.

of the Vedānta is fourfold, according to Śaṅkara.¹ One should, first, be able to discriminate between what is eternal and what is not

eternal (nityānitya-vastu-viveka). He should, secondly, be able to give up all desires for enjoyment of objects here and hereafter (ihāmutrārtha-bhoga-virāga). Thirdly, he should control his mind and his senses and develop qualities like detachment, patience, power of concentration (śamadamādi-sādhana-sampat). Lastly, he should have an ardent desire for liberation (mumukṣutva).

With such preparation of the intellect, emotion

Study, reasoning and contemplation are necessary for the realization of truth.

and will one should begin to study the Vedānta with a teacher who has himself realized Brahman.

This study consists of the threefold process: listening to the teacher's instructions (śravaṇa), understanding the instructions through reasoning until all doubts are removed and conviction is generated (manana), and repeated meditation on the truths thus accepted (nididhyāsana).

The forces of deep-rooted beliefs of the past do not disappear so soon as the truths of the Vedānta are learned. Only repeated meditation on the truths and life led accordingly can gradually root them out. When wrong beliefs thus become removed and belief in the

¹ Vide Śaṅkara's *Bhāṣya* on sūtra 1.1.1.

truths of the Vedānta becomes permanent, the seeker after liberation is told by the teacher 'Thou art Brahman.' He begins then to contemplate this truth steadfastly till at last he has an immediate realization of the truth in the form 'I am Brahman.' Thus the illusory distinction between the self and Brahman at last disappears and bondage, too, along with it. Liberation (*mukti*) is thus attained.

Even on the attainment of liberation the body may continue because it is the product of *karman*s which had already borne their effects (*prārabdha-karma*). Liberation is possible even while the soul is associated with the body.

But the liberated soul does never again identify itself with the body. The world still appears before him, but he is not deceived by it. He does not feel any desire for the world's objects. He is, therefore, not affected by the world's misery. He is in the world and yet out of it. This conception of Sāṅkara has become well-known in later Vedānta as *Jīvan-mukti*¹ (the liberation of one while he is alive). It is the state of perfection attained here. Like Buddha, the Sāṅkhya, the Jaina and some other Indian thinkers, Sāṅkara believes that perfection can be reached even here in this life. It is not a mere extramundane prospect, like heaven, to be attained hereafter in an unperceived future. It is true that the seeker after liberation is asked to begin with some

¹ Vide Sāṅkara's *Bhāṣya* on *sūtra* 1.1.4 : " *siddham jīvato'pi viduṣaḥ āśarīratvam*."

faith in the testimony of the scriptures regarding the utility of the spiritual discipline he is required to follow. But his faith is fully justified and more than repaid by the end it secures in this very life.

Three kinds of karma can be distinguished. Karmas gathered in past lives admit of two divisions, those that have borne their effects (*prārabdha-karma*) and those that still lie accumulated (*sañcita-karma*). In addition to these two kinds, there are karmas which are being gathered here in this life (*sañciyamāna*). Knowledge of reality destroys the second kind and prevents the third and thus makes rebirth impossible. But the first kind which has already borne effects cannot be prevented. Hence the present body, the effect of such karma, runs its natural course and ceases when the force of the karma causing it becomes automatically exhausted, just as the wheel of a potter which has been already turned comes to a stop only when the momentum imparted to it becomes exhausted. When the body, gross and subtle, perishes, the *jīvan-mukta* is said to attain the disembodied state of liberation (*videha-mukti*).

Liberation is not the production of anything new, nor is it the purification of any old state ; it is the realization of what is always there, even in the stage of bondage, though not known then. For, liberation is nothing but the identity of the self and Brahman, which is always real, though not always recognized. The attainment of liberation is, therefore, compared by the Advaitins to the finding of the necklace on the neck by one who forgot its existence there and searched for it hither and thither. As bondage is due to an illusion, liberation is only the removal of this illusion.

Liberation is not merely the absence of all misery that arises from the illusory sense of distinction between the self and God. It is conceived by the Advaitin,

Liberation is positive bliss.

after the Upaniṣads, as a state of positive bliss (ānanda), because Brahman is bliss and liberation is identity with Brahman.

Though the liberated soul, being perfect, has no end to achieve, it can work still without any fear of further bondage. . Sāṅkara, following the *Gītā*, holds that work fetters a man only when it is performed with attachment. But one who has obtained perfect knowledge and perfect satisfaction, is free from attachment. He can work without any hope of gain and is not, therefore, affected by success or failure. Sāṅkara attaches great importance to disinterested work. For one who has not yet obtained perfect knowledge, such work is necessary for self-purification (ātma-śuddhi), because it is not through inactivity but through the performance of selfless action that one can gradually free oneself from the yoke of the ego and its petty interests. Even for one who has obtained perfect knowledge or liberation, selfless activity is necessary for the good of those who are still in bondage.¹

The value of disinterested work for both the wise and the ignorant.

The liberated man is the ideal of society and his life should be worthy of imitation by the people at large. Inactivity or activity that would mislead them should, therefore, be avoided by the perfect.² Social service is not, therefore, thought

The life of the liberated should be a worthy ideal of society.

by the perfect.² Social service is not, therefore, thought

¹ Vide Sāṅkara's *Bhāṣya* on the *Bhagavadgītā*, 4.14, 8.20-28 and *passim*.

Ibid.

by Saṅkara to be incompatible with the perfect life, but rather desirable. In his own life of intense social service Saṅkara follows this ideal. This ideal is also advocated by some eminent modern Vedāntists like Svāmī Vivekānanda¹ and Lokamānya B. G. Tilak.²

The critics of Advaita Vedānta have often urged

Does the Vedānta disregard the distinction between right and wrong?

that if Brahman be the only reality and all distinctions false, the distinction between right and wrong also would be false. Such a philosophy

is, therefore, fruitful of dangerous consequences for society. This objection is due to the confusion of the lower and the higher standpoint. From the empirical standpoint, the distinction between right and wrong, like other distinctions, is quite valid. For one who has not yet attained liberation, any action which directly or indirectly leads him towards the realization of his unity with Brahman, is good and that which hampers such realization, directly or indirectly, is bad. Truthfulness, charity, benevolence, self-control and the like would be found to fall under the first category even according to this criterion, whereas falsehood, selfishness, injury to others would come under the second. One who has attained perfect knowledge and liberation would look back upon these moral distinctions as being relative to the lower standpoint and, therefore, not absolutely valid. But neither would he perform a bad action in so far as the motive of every bad action is based on the ignorant identification of the self with

¹ Vide his *Practical Vedānta*.

² Vide his *Gītārāhasya* (a Marāṭhi treatise on the *Gītā*) on the above verses and Introduction, sec. 12.

the body, the senses and the like, in a word, on the lack of the sense of unity between the Self and Brahman.¹

In conclusion, we should observe that the Vedānta of Śaṅkara, in its different aspects, is an attempt to follow out the Upaniṣadic idea of the unity of all existence to its logical conclusion. With all its defects and excellence, it stands in the history of human thought as the most consistent system of monism. As William James puts it (in appreciation of Śaṅkara's Vedānta as presented by Svāmī Vivekānanda in America): "The paragon of all monistic systems is the Vedānta philosophy of Hindostan."² It is true that such a system fails to appeal to those who turn to philosophy for the justification of their imperfect ideas of worldly distinctions and worldly values, or to those who turn faint-hearted to religion for help and mercy. The philosophy of Rāmānuja would be more satisfying to them. Like the teachings of early Buddhism and Jainism, the monistic philosophy of Śaṅkara is only for the strong-hearted who can follow logic dauntlessly and face conclusions however subversive of ordinary ideas of reality and value. But, for those few who have the heart for it, Advaita monism is not without recompense and is not even without emotional satisfaction. As James puts it: "*An Absolute One, and I that One*,—surely we have here a religion

² Vide James, *Pragmatism*, p. 151.

which, emotionally considered, has a high pragmatic value ; it imparts a perfect sumptuousity of security." ¹
" We all have some ear for this monistic music: it elevates and reassures." ² Regarding Sāṅkara, the greatest advocate of this philosophy, we may conclude with the words of Radhakrishnan: " Supreme as a philosopher and a dialectician, great as a man of calm judgment and wide toleration, Sāṅkara taught us to love truth, respect reason and realise the purpose of life. Twelve centuries have passed, and yet his influence is visible. . . . Even those who do not agree with his general attitude to life will not be reluctant to allow him a place among the immortals." ³

WORKS BY THE SAME AUTHORS

The Nyāya Theory of Knowledge: A critical study of some problems of Logic and Metaphysics. By S. C. Chatterjee, M.A., Ph.D. (Published by the University of Calcutta.)

OPINIONS

"A clear and complete statement of the Nyāya Theory of Knowledge. References to Western systems of thought are always interesting and often illuminating."

—*Sir S. Radhakrishnan.*

"Professor S. C. Chatterjee's articles on the Nyāya Philosophy (Epistemology and Logic) show deep erudition, powers of acute analysis and a firm philosophical grasp."

—*Sir B. N. Seal.*

"It is, in every way, a scholarly work; and it forms, in my opinion, a very valuable contribution to modern studies of the Indian systems of philosophy."

—*Professor M. Hiriyanna.*

"Dr. S. C. Chatterjee's *The Nyāya Theory of Knowledge*...a precious possession of any person interested in the study of Indian Philosophy...it is a boon even to the uninitiated."

—*Professor B. M. Barua.*

"The author has rendered a very substantial service to the study of Indian philosophy by his careful exposition of the essential Nyāya doctrines...with due

WORKS BY THE SAME AUTHORS

regard to other Indian theories and to Western philosophical conceptions. His constant effort to avoid mere presentation of his authorities and instead to make clear the implications of their doctrines expressed in the terminology of modern philosophy is unquestionably the most effective way of making Indian philosophy a real and living factor in present-day metaphysical theory."

—*Professor A. B. Keith.*

The Six Ways of Knowing: A critical study of the Vedānta Theory of Knowledge. By D. M. Datta, M.A., Ph.D. (Published by George Allen & Unwin Ltd., London.)

OPINIONS

"There are, I am constrained to believe, very few scholars east and west so well equipped for this task as Dr. Datta. I can think of no Western Sanskritists who have anything like his acquaintance with contemporary British and American philosophy ;...In the light of this wide reading, he defends most of the positions of the Vedānta with surprising effectiveness."

—*Professor J. B. Pratt.*

"A work of very wide scholarship...a very important work not only for philosophy, but for the union of the two civilizations."

—*Professor J. H. Muirhead.*

"It unquestionably represents a very valuable contribution to our knowledge of Indian epistemology."

—*Professor A. B. Keith.*
